REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN, K.T.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

The Report for the year 1911, which I now have the honour of submitting for Your Excellency's consideration, is the Forty-eighth Annual Report on the Vital Statistics of Ireland, the first having been prepared for the year 1864.

In this Report the population of Ireland estimated to the middle of the year 1911, and also the calculations of the various rates, are based upon the figures in the Parliamentary Abstract of the Census of 1911.

It is a matter for congratulation that the decrease in population during the period 1901–1911, was only 1·7 per cent. as compared with a decrease of 5·2 per cent. in the preceding decennial period.

It also appears from the text of this Report that the death rate from tuberculous disease has again shown a reduction, namely :—from 2·3 per 1,000 in the year 1910, to 2·2 per 1,000 in the year 1911, the actual decrease in the number of the deaths being 393.

This decline in the mortality from tuberculosis, I respectfully venture to predict, will be appreciated by your Excellency.

GENERAL SUMMARY.

As shown in the following summary the Marriages registered in Ireland during the year 1911 numbered 23,473; the Births, 101,758; and the Deaths, 72,475. The marriage-rate was 5·37 per 1,000 of the estimated population, showing an increase of 0·32, as compared with that for the year 1910, and an increase of 0·21 as compared with the average rate for the ten years, 1901-1910; the birth-rate was 23·3 per 1,000 of the estimated population, being the same as that for the preceding year, and also equal to the average rate for the ten years, 1901-1910; and the death-rate (16·6 per 1,000), was 0·5 below the rate for the preceding year, and 0·8 below the average rate for the ten years, 1901-1910.

TABLE I.—Showing for each of the years 1901–1911 the estimated **Population*** ; the number of **Marriages, Births,** and **Deaths** registered, and the number of **Emigrants** (Natives of Ireland) enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1901–1910.

* See page 154.

The Diagram facing the preceding page gives the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1892-1911, and by the number of Emigrants enumerated in each of these years.

The number of Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties is 2,690. The cases of vacancies or appointments which were dealt with during the year 1911, number 502.

The following table shows the number of Searches made and Certificates issued at the General Register Office (exclusive of Searches made and Certificates issued for official purposes, which, in 1911, numbered 981 of the former and 792 of the latter); also the amount received as fees for same, in each year, since the passing of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 48 years 1864–1911.

Offences coming within the scope of the Acts administered by this Department reported during the financial year ended 31st March last, numbered 528. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 26 cases. In 14 of these the offenders were convicted and punished; one case was dismissed; and in nine the proceedings were abandoned, the defendants (in most instances) paying the costs of Court and complying with the law.

Amongst the offences dealt with the following are included:—Neglect to register births; neglect to register deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; neglect to comply with Requisition to correct entry.

A sum of £120 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £57 1*s.* 6*d.*, of which sum £22 19*s.* 0*d.* was paid for local professional assistance, and £32 3*s.* 0*d.* for mileage and allowances to the Registrars, the balance of the expenditure being mainly in respect of Court costs.

MARRIAGES.

The total Marriages registered during the year numbered 23,473, representing a rate of 5·37 per 1,000 of the estimated population*; this rate is 0·32 above that for the previous year, and 0·21 above the average for the ten years, 1901-1910.

Of the 23,473 Marriages registered during last year, 16,729 were of Roman Catholics; 3,627 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,211 were in Presbyterian Meeting-houses; 461 in "Registered Buildings" belonging to various religious denominations; 435 by civil contract in the Registrars' offices; 3 were according to the usages of the Society of Friends; and 7 according to the Jewish rites.

The marriages of Roman Catholics represent a rate of 5·17 per 1,000 of the Roman Catholic population estimated to the middle of 1911, or 0·30 above the corresponding average rate for the preceding ten years, and the other Marriages are equivalent to a rate of 5·91 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·10 under the corresponding average rate for the ten years, 1901–1910.

Of the 3,627 Marriages celebrated according to the rites of the Church of Ireland, there were 46 by special licence, 2,988 by licence, 580 after the publication of banns, and 10 on Registrar's certificate; in 3 instances no information was afforded as to which of these methods was adopted.

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast are based on the estimated population in the middle of the respective years, those for the provinces for the years 1902–1909, on the population according to the Census of 1901, those for the provinces for the years 1910 and 1911 and for the remaining counties for the year 1911 on the population according to the Census of 1911.

TABLE IV.—**Marriages** registered in Ireland in 1911, and in each of the previous ten years, according to the **modes of celebration**; with the rate per 1,000 of the population represented:—

The number of Licences for Marriages issued by the Registrars during the year 1911 in Registered Buildings and in the Registrars' Offices was 771.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1911.	Number of Registered Meeting-houses on 31st December, 1911.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland,	157	590	2,086
2. Remonstrant Synod of Ulster, ...	10	20	22
3. Presbytery of Antrim, ...	4	11	18
4. United Presbytery or Synod of Munster, ...	1	2	2
5. Presbytery of Ireland (United Free Church of Scotland), ...	6	9	27
Total, ...	178	632	2,155

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary. With reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized otherwise than by special licence. On the 31st December, 1911, there were 1,487 churches and chapels of the Church of Ireland, 632 registered Presbyterian Meeting-houses, and 429 "Registered Buildings" belonging to various religious denominations.

The number of "Registered Buildings" belonging to the several religious bodies, as revised for the year 1911, is shown in the following list:—

Denominations.	No. of Places of Worship.
Methodists, ...	263
Reformed Presbyterians, ...	39
Baptists, ...	32
Independents, or Congregationalists, ...	30
Christian Brethren ...	29
Moravians, or United Brethren,	9
Salvation Army, ...	9
Seceders, ...	9
"The Catholic Apostolic Church,"	2
Non-Subscribing Unitarians,	1
Non-Subscribing Christians,	1
Welsh Presbyterians, ...	1
"Undenominational," ...	1
Jews, ...	1
"Holiness Movement" Church	1
"Presbyterians (Unattached),"	1
Total, ...	429

Of the 23,473 marriages registered, there were 7,175 recorded in the first quarter, 5,523 in the second, 5,225 in the third, and 5,550 in the fourth quarter of the year 1911.

Calculations based on the figures given in the Abstract of Marriages, commencing on page 2, show that the marriages of bachelors with spinsters constituted 90·1 per cent. of the total; that those of widowers and spinsters were 6·6 per cent.; that the marriages of bachelors and widows were 1·9 per cent.; and that those of widowers and widows formed 1·4 per cent. of the total marriages. Thus of the men married, 8·0 per cent. were widowers, and of the women, 3·3 per cent. were widows; so that, in 11 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1901–1911, and the average number for the ten years 1901–1910, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

The importance of obtaining a statement of the correct age at marriage cannot be over-estimated in view of the recent statistical inquiries made by the Census Commissioners with respect to fertility. It is, therefore, much to be desired that the custom of omitting the ages of those married in the certificates of marriage be discontinued, as a complete record of the ages of the persons married would be valuable; and it is regrettable that this information is not contained in the records in the majority of the entries. The entry in the column for age in the register of "minor" or "full age," as the case may be, satisfies the requirements of the law in this respect, and up to the year 1908 there appears to have been in Ireland a general and increasing inclination to take advantage of this circumstance—in the year 1865, out of 30,802 marriages registered in Ireland, the ages of both parties were given in 13,910 cases, being equal to 45·2 per cent. of the total marriages in that year, while in the year 1908 such cases fell to 3,454, or only 15·2 per cent. of the total marriages recorded during 1908. In the year 1909 the number of cases in which the information regarding the age of both parties was stated, though bearing unfavourable comparison with the numbers returned in the earlier years of registration, was, however, 1,357 above the number of such cases in 1908, the number for 1909 being 4,811, equivalent to 21·2 per cent. of the total number of marriages registered in Ireland in that year. In the year 1910 the number declined to 4,796, but was 21·7 per cent. of the total number of marriages registered in Ireland during the year, and in the year under notice rose to 5,320.* Of those married in England and Wales during the year 1910, 99·22 per cent. of the husbands and 99·14 per cent. of the wives made definite statements of age at time of marriage.

The number under age of 23,473 men married during the year was 289, or 1·23 per cent.; and of the women married 1,247, or 5·31 per cent., were minors.

Of husbands who married under age the proportion in 1911 was highest in the province of Leinster, namely, 1·67 per cent.; the highest proportion of wives (6·73 per cent.) was in the province of Ulster.

It appears that in Ireland the percentage of persons married who were under age is very far below the corresponding percentages in England and Scotland.

* In 874 instances in 1911 the age at marriage was stated by only one of the contracting parties, viz., 409 men and 465 women.

The progress of elementary education may be estimated from the number of signatures made by the contracting parties in the marriage registers or certificates. In the year 1911, there were 22,031, or 93·9 per cent., of the husbands, and 22,544, or 96·0 per cent., of the wives, who wrote their names, and the remainder signed by marks, as against 20,360, or 90·2 per cent., of the husbands, and 20,953, or 92·9 per cent., of the wives, in the year 1901; and 17,313, or 80·6 per cent., of the husbands, and 17,303, or 80·6 per cent., of the wives, in the year 1891.

When compared with the corresponding results in the first of the preceding ten years the figures show an improvement, the percentage of men married in 1901 who wrote their names being 90·2 and women 92·9; and they show a marked advance when compared with the percentage for the year 1864, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

Among men the percentages during the year 1911 for the provinces range from 91 in Connaught to 95 in Munster; and, among women, from 95 in Ulster to 97 in Munster.

In 339 cases both of the persons married signed the register by "mark" and the register was thus signed by either the husband or the wife in 1,693 cases, so that in 2,032 cases, or 8·7 per cent. of the total number of marriages, one or both of the parties attested the signature by "mark"; and in 21,441 marriages or 91·3 per cent., *both* parties wrote their names.

The following table gives for Ireland, and for each of the four provinces, the proportion per cent. of persons married in each of the eleven years 1901-1911, who wrote their names in the registers or certificates; of minors; of widowers; and of widows:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1901–1911, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-marriages.**

	1911,	90·6	95·5	0·31	3·36	7·03	2·64

In the Provinces the highest marriage rate in 1911 was recorded in Ulster, the rate being 5·8 per 1,000 of the population, according to the Census of 1911. The rate in Leinster was 5·6. The rate for Munster was 5·1 per 1,000, and that for Connaught 4·3 per 1,000.

In the county, or county borough areas, the highest marriage rate was 7·6 per 1,000 of the population for the county borough of Belfast, and the lowest was 3·6 per 1,000 for the county of Galway. Between these extremes the highest rates were 7·5 for the county borough of Dublin, 5·9 for Limerick county and county borough, 5·7 for each of Dublin county, Londonderry county and county borough, and Tyrone county, and the lowest were 4·0 for the county of Kildare, 4·1 for the county of Clare, 4·2 for the county of Mayo, 4·3 for the county of Donegal, and 4·5 for each of Longford, Queen's County, Cavan and Leitrim.

BIRTHS.

During the year 1911 the births registered numbered 101,758—52,448 boys and 49,310 girls, or 106·4 of the former to every 100 of the latter—the ratio to the estimated population being 1 in 43·0, or 23·3 per 1,000, which is equal to the average rate per 1,000 for the ten years, 1901-1910.

The total births (101,758) registered in Ireland during the year 1911, include 98,957, or 97·2 per cent., which were legitimate, and 2,801, or 2·8 per cent. which were illegitimate, the latter being 0·2 above the corresponding average percentage for the preceding ten years. The percentage of illegitimate births bears favourable comparison with the returns for most other countries.

The number of male children born in wedlock was 50,991, and of female, 47,966, or 106·3 of the former to every 100 of the latter; of the illegitimate children, 1,457 were males, and 1,344 females, being 108·4 boys to 100 girls.

From Table VII. it appears that of the children born in Ulster, 3·7 per cent. were illegitimate; in Leinster, the percentage was 2·9; in Munster, 2·2; and in Connaught, 0·7.

TABLE VII.—The Percentage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1907–1911 by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

In the Provinces the rates represented by the total births registered during the year 1911 were—in Leinster, 23·5 per 1,000 of the population in 1911; Munster, 22·8; Ulster, 23·7; and Connaught, 22·3.

The county or county borough areas which had the highest birth-rates, were—31·2 for Dublin county borough; 28·5 for Belfast county borough; 24·6 for county Kerry; 24·4 for Limerick county and county borough; 24·3 for Mayo; 23·4 for Antrim; and 23·0 for Tipperary, South Riding. The lowest rates were—for Dublin county 18·0; for Cavan county 19·4; for Meath 19·5; for Clare 19·6; for Wicklow 19·8; and for Roscommon 19·9.

Of the total births, 51·6 per cent. were registered in the first six months of the year (181 days), and 48·4 per cent. in the second six months of the year (184 days).

In the first quarter of the year the total number of births registered was 25,773; in the second, 26,714; in the third, 25,431; and in the fourth, 23,840.

In the following table particulars are supplied concerning Multiple Births in Ireland for a period of 4 years.

MULTIPLE BIRTHS IN IRELAND IN EACH OF THE YEARS 1908–1911.

Year.	Total Births.	Twin Births.	Triplets.	Quadruplets.	Twin Births—per cent. of		
					Total Births.	Single Births.	Total Mothers.

1909	102,759	1,201	17	–	1·169	1·197	1·183
1910	101,963	1,128	13	–	1·106	1·132	1·119
1911	101,758	1,266	10	–	1·244	1·276	1·260

It appears from the above that during the year 1911, there were registered 1,266 twin births, and 10 triplets; and that the twin-births were 1·244 per cent. of the total births, 1·276 per cent. of the single births, and 1·260 per cent. of the total mothers.

DEATHS.

The number of deaths registered in Ireland during the year 1911 was 72,475, equivalent to 1 in 60·4, or 16·6 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 36,198, and those of females to 36,277, the rate for males being 16·6 per 1,000, and for females 16·5 per 1,000.

The death-rate (16·6) is 0·5 under that for the year 1910, and 0·8 under the average rate for the ten years, 1901–1910.

As in previous years, many of the Registrars have supplied useful notes in their Quarterly Returns relating to the sanitary condition of their respective districts. These notes were published in the Quarterly Reports issued from this Department, and it is desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

The recorded death-rates for the four provinces are as follows:—Connaught, 14·0; Munster, 15·5; Ulster, 16·8; and Leinster, 18·5 per 1,000 of the population, according to the Census of 1911.

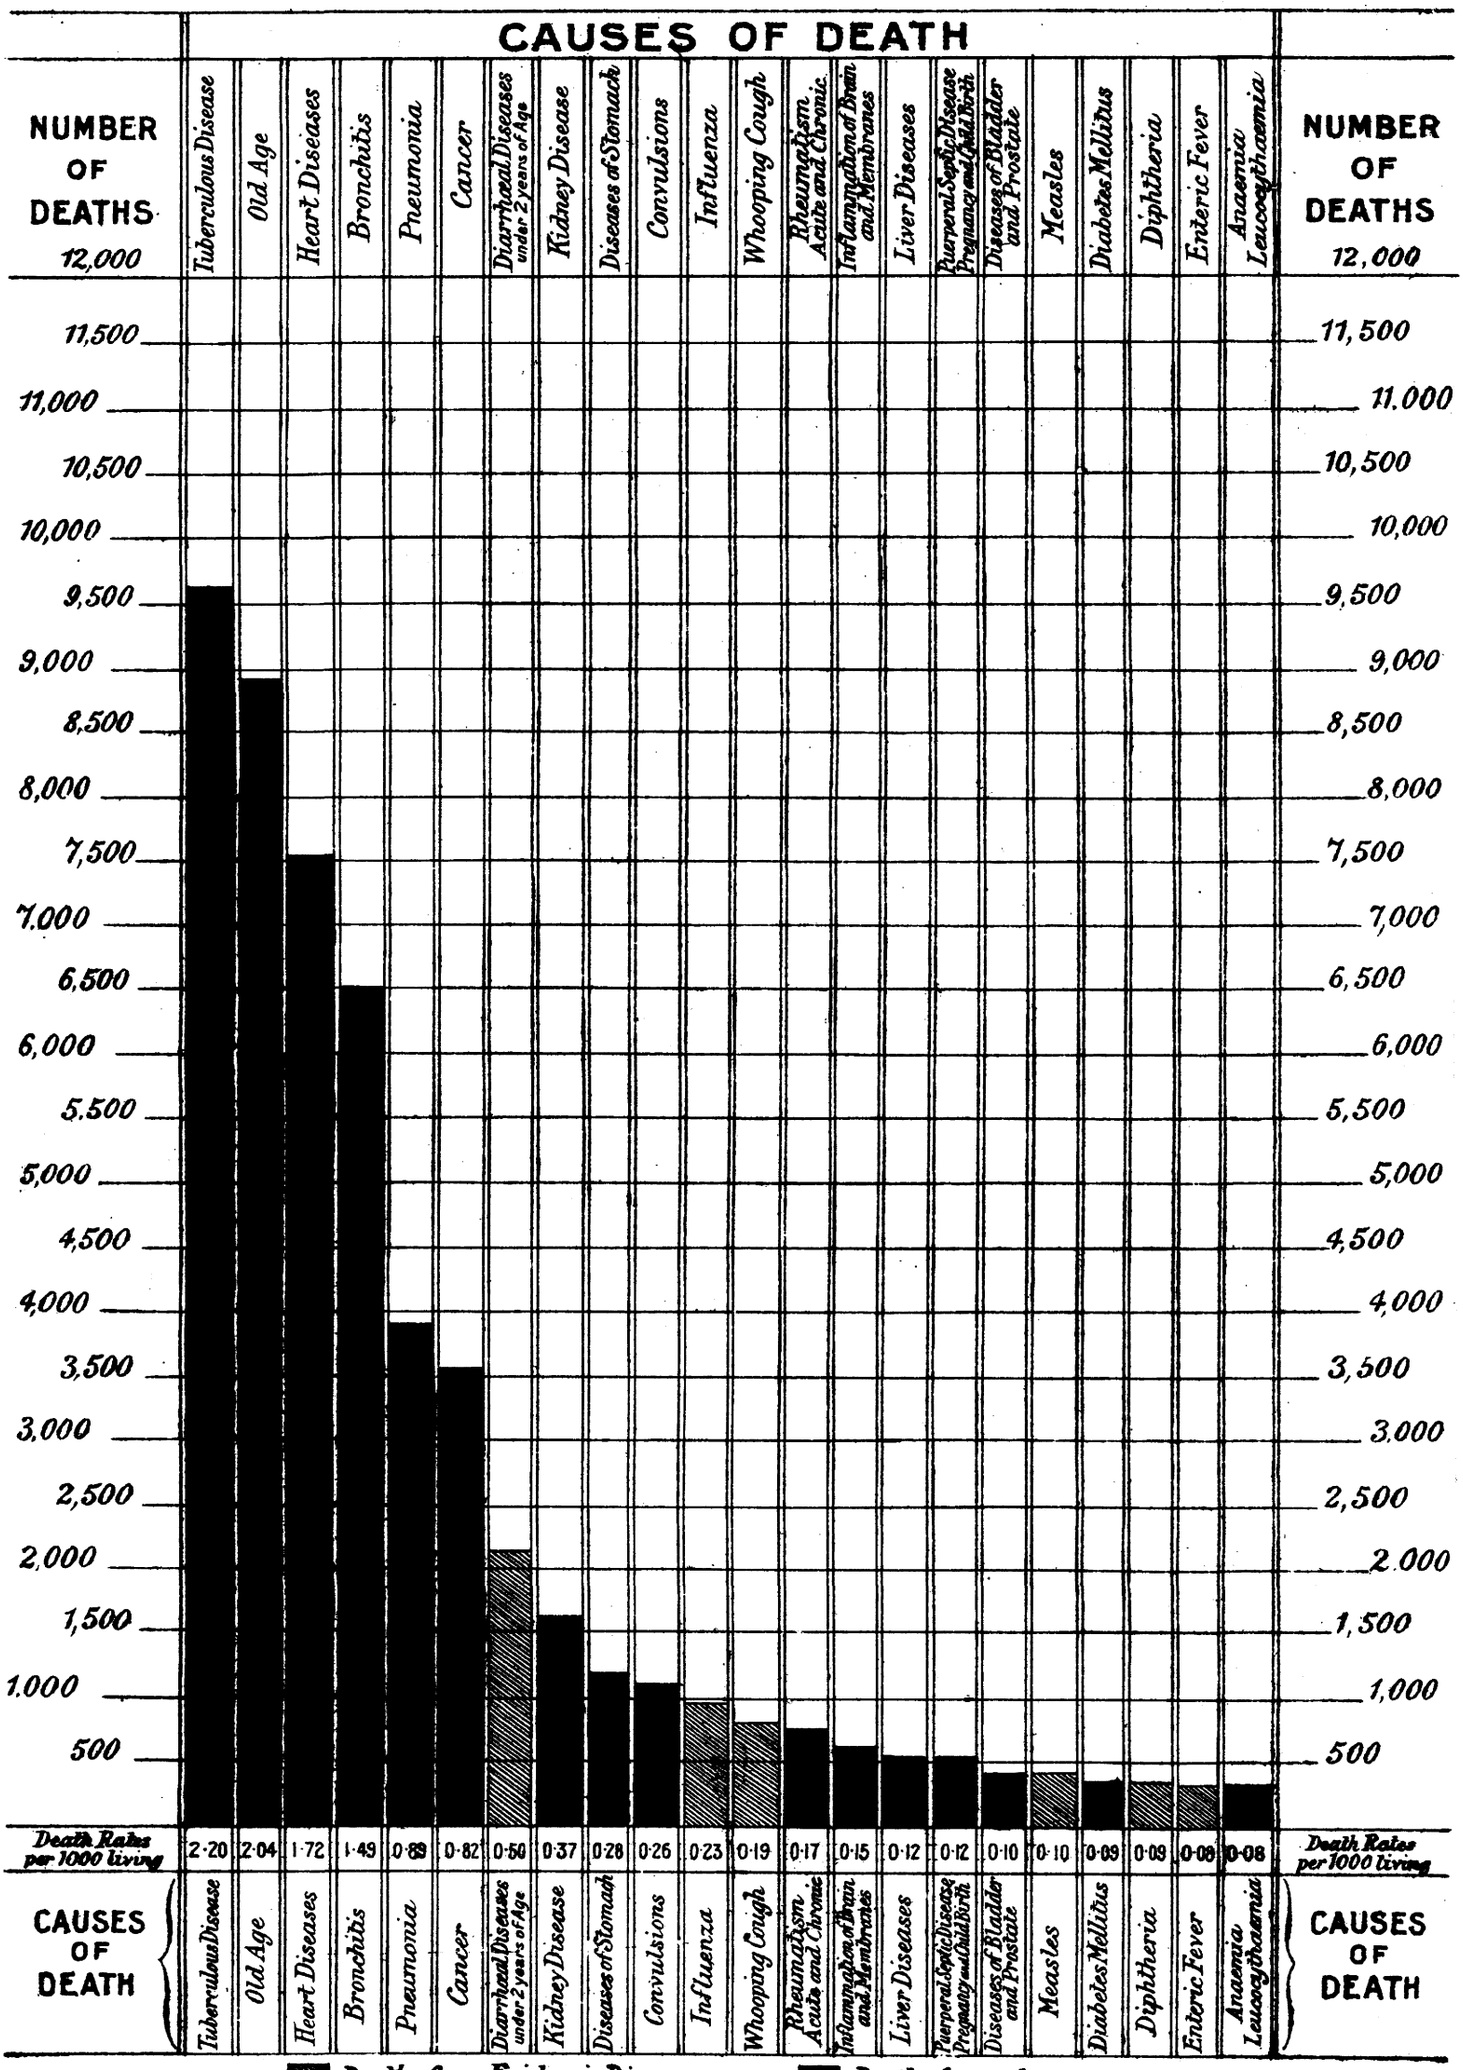
The counties having the lowest mortality rates per 1,000 of the population were:—counties Kerry and Leitrim, each 12·8; county Roscommon, 13·7; county Galway, 13·8; county Mayo, 14·0; and Tipperary, North Riding, 14·4.

The highest rates are as follows:—Dublin county borough, 24·1; Tyrone county, 18·7; Armagh county, 18·1; Kilkenny county, 17·7; Monaghan county, 17·4; Wexford county, 17·2; Longford county, 17·1; and Belfast county borough, 17·0.

As observed in prior reports, the number of deaths registered in the first half of the year generally exceeds the number registered in the second half, the deaths registered in the six months of 1911, January to June inclusive, constituting 54·5 per cent. of the total for the year, and those in the remaining six months 45·5 per cent.

The deaths registered in each quarter are represented by the following annual rates:—First quarter, 19·0 per 1,000 of the population; second, 17·1; third, 14·6; and fourth, 15·5. The rate for the first quarter is 1·4 below, the second 1·3 below, the third 0·1 above, and the fourth 0·9 below the average rate for the corresponding quarters in the ten years, 1901-1910.

DIAGRAM No. 2.—Mortality from Twenty-two of the Principal Causes of Death in Ireland, in the year 1911.



To face page xiii

17278. (Wt. P.274—26.2.18.875 7/12 A.T.&Co., Ltd.

Of the 72,475 *deaths registered during the year, as will be observed from the table on pp.* 144–153, 3,613 *took place in Infirmaries and General and Special Hospitals;* 1,457 *in Public Lunatic Asylums;* 9,904 *in Workhouses and Workhouse Hospitals; and* 57,501 *were of persons who died "At their Own Homes, &c."*

The number of deaths in "Infirmaries and General and Special Hospitals" is equivalent to 5·0 per cent. of the total deaths registered in Ireland, the percentages for the four provinces varying from 0·6 in Connaught to 10·5 in Leinster. Of the deaths registered, 13·7 per cent. occurred in Workhouses or Workhouse Hospitals, the respective percentages of these deaths for the provinces being—Leinster, 15·8; Munster, 18·6; Ulster, 10·1; and Connaught, 10·3.

TABLE VIII.—Showing by QUARTERLY PERIODS, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1901–1911, and the average number for the ten years, 1901–1910.

CAUSES OF DEATH.

The classification of causes of death in this Report is according to the International Nomenclature of Diseases. Care has been taken that, as far as possible, continuity has been preserved, and comparisons with previous years made possible while adopting this system.

STATEMENT showing the number of deaths from the undermentioned causes registered in Ireland during each of the years 1910 and 1911, with the annual average number for the ten years, 1901-1910.

CAUSES.	NUMBER OF DEATHS REGISTERED.			CAUSES.	NUMBER OF DEATHS REGISTERED.		
	Years.		Average 10 years, 1901-1910.		Years.		Average 10 years, 1901-1910.

Influenza, ...	992	1,332	1,373	Accidents of Pregnancy and Childbirth.	328	351	361

The foregoing summary shows that there was a decrease of 422 deaths from measles in the year 1911, when compared with 1910 ; a decrease of 482 deaths from whooping-cough ; a decrease of 340 deaths from influenza ; a decrease of 393 deaths from all forms of tuberculous disease ; a decrease of 82 deaths from cancer ; a decrease of 264 deaths from pneumonia ; a decrease of 939 deaths from bronchitis ; a decrease of 5 deaths from puerperal septic diseases, and a decrease of 23 deaths from accidents of pregnancy and childbirth ; on the other side, enteric fever shows an increase in the deaths over the year 1910 of 78 ; scarlet fever of 120 ; diphtheria of 39 ; cerebro-spinal fever of 7 ; and an increase in the deaths from diarrhœa and enteritis of children under 2 years of 927 deaths.

In order to facilitate the study of the more important figures I have prepared the following diagrams and map :—

DIAGRAM No. 1.—Showing the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years, 1892-1911, and by the number of Emigrants enumerated in the same years, ... *Facing* Page v.

„ „ 2.—Showing the comparative Mortality from twenty-two of the principal causes of Death in Ireland in 1911, „ xiii.

„ „ 3.—Showing the death-rates from Enteric Fever in Ireland, as compared with England and Scotland, during each of the 42 years, 1870-1911, . . „ xix.

„ „ 4.—Showing the death-rate from Tuberculosis in Ireland, as compared with England and Scotland, during each of the forty-eight years, 1864-1911, . . „ xxv.

„ „ 5.—Showing the proportion of deaths of males and females registered in Ireland from Tuberculous Disease at each age-period per 1,000 living at those ages in 1911, „ xxvii.

MAP.—Map showing the death-rate for all forms of Tuberculous Disease in Ireland, by Counties, for the year 1911. „ xxix.

Enteric Fever.—The deaths registered in the whole of Ireland from enteric fever numbered 356, equivalent to an annual rate of 0.08 per 1,000, this number although it is larger than the numbers registered in either of the 2 preceding years is considerably below the average for the 10 years, 1901 and 1910. Of the total deaths 206 were of males and 150 were of females. The distribution of the mortality may be seen in the abstracts which commence on page 140 ; it appears from these that 77 of the total deaths from enteric fever were registered in Dublin county borough ; 19 were registered in Cork union ; 10 in the union of Enniskillen ; 10 in Limerick ; 16 in Lisburn and 16 in Omagh union.

The diagram facing this page gives a comparison of the mortality rates from enteric fever in England and Wales, Scotland and Ireland since the year 1870. It appears from this that a great improvement has taken place regarding the mortality from this disease.

TABLE XI.—Showing, for the year 1911, the number of deaths from the several forms of **Fever** at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

* Formerly described as "Simple Continued Fever."

Typhus.—The mortality from typhus which had fallen to 43 deaths for the whole of Ireland in the year 1909, rose in the year 1910 to 63, and declined in the year under notice to 37, the lowest figure as yet recorded in Ireland. Of the 37 deaths 22 were of males and 15 were of females. The 37 deaths occurred in the unions as following:—one in Athlone, one in Ballina, one in Ballymena, two in Belfast, one in Cahersiveen, 3 in Castlebar, one in Clonakilty, one in Clonmel, 4 in Cork, 4 in South Dublin, one in Ennistimon, one in Gort, one in Kilmallock, 3 in Kilrush, one in Lisburn, 2 in Millford, 4 in Oughterard, one in Rathdrum, 3 in Skibbereen and one in Sligo.

[TABLE

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes; from some during each of the eleven years, 1901-1911, with the Average Annual Number for the represented by the number of deaths from these causes, and the percentage of

1883, ...	810	1898, ...	223		

Small-pox.—During the period under notice there was no record of mortality from small-pox in Ireland neither was there any report of a case of the disease occurring transmitted to this office. The last death from small-pox in Ireland was in the year 1907, in which year one death was registered.

It may be seen in the supplement to the quarterly returns of Marriages, Births and Deaths in Ireland (1910), that of the children born in that year 77.3 per cent were vaccinated successfully. In the year 1904 the percentage of successful vaccinations was 81, rising to 82 in the year 1905, and steadily decreasing during the years 1906–1909, to the percentage mentioned above, namely, 77 in the year 1910, this reduction in the percentage of vaccinated children in Ireland is to be deplored, as no efficient protection against small-pox can be acquired unless by vaccination and re-vaccination. In the event of a death taking place from small-pox, the Medical Practitioner in attendance should endeavour to obtain the following particulars.

1. *If there is no evidence of vaccination.*
2. *If vaccinated in infancy only—number of scars.*
3. *If vaccination is performed only after infection by small-pox.*
4. *If stated to be vaccinated, but no scars visible.*
5. *If re-vaccinated, the date of re-vaccination, if possible.*

There was no death from vaccinia or effect of vaccination registered during the year. There were 2 deaths from varicella, one of a male aged 17 years and one of a female aged 2 years.

The following table gives the number of deaths from small-pox, and the number of primary vaccinations reported by the Registrars in their quarterly returns for each of the years 1882–1911.

Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.
1882	129	107,613	1892	-	89,527	1902	1	94,303
1883	16	106,961	1893	1	88,695	1903	40	95,955
1884	1	105,021	1894	72	107,204	1904	16	91,976
1885	4	102,680	1895	146	92,227	1905	5	89,394
1886	2	97,137	1896	4	88,817	1906	-	90,171
1887	14	96,866	1897	3	89,732	1907	1	89,207
1888	3	93,520	1898	-	87,169	1908	-	88,576
1889	-	92,621	1899	1	84,937	1909	-	86,799
1890	-	93,368	1900	1	91,150	1910	-	88,698
1891	7	92,267	1901	2	88,520	1911	-	84,011

The foregoing summary shows that not one death from small-pox has been registered in Ireland during the 4 years ending with 1911. The last death from small-pox was in 1907.

The following table gives particulars regarding the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1910, with their percentage to the total Births registered during each year :—

Years.	Successful Vaccinations (Form A, First Schedule).		Vaccinations Postponed (Form B, first Schedule).		Insusceptible of Vaccine Disease (Schedule D).				Died before Vaccination.		Unaccounted for, owing to removal from District or otherwise.		Defaulters who have not been granted an extension of time under Form B, First Schedule.		Total Births Registered.	
					On the ground of constitutional insusceptibility of the Vaccine Disease.		In respect of the children having already had Small-pox.									
	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.
1904	84,068	81·0	2,184	2·1	118	0·1	2	0·0	7,105	6·9	3,774	3·6	6,560	6·3	103,811	100·0
1905	84,326	82·0	2,505	2·4	90	0·1	.	.	6,624	6·5	3,625	3·5	5,662	5·5	102,832	100·0
1906	83,223	80·4	2,555	2·5	121	0·1	.	.	6,955	6·7	4,229	4·1	6,453	6·2	103,536	100·0
1907	81,841	80·4	2,360	2·3	88	0·1	.	.	6,656	6·6	3,567	3·5	7,230	7·1	101,742	100·0
1908	80,504	78·9	2,601	2·5	96	0·1	.	.	6,808	6·7	3,217	3 2	8,813	8·6	102,039	100·0
1909	80,455	78·3	2,715	2·6	118	0·1	.	.	6,651	6·5	3,884	3·8	8,936	8·7	102,759	100·0
1910	78,839	77·3	2,754	2·7	83	0·1	.	.	6,680	6·6	3,694	3·6	9,913	9·7	101,963	100·0

From this it appears that the successful vaccinations, which were 81 per cent. of the births registered in 1904, rose to 82 per cent. for 1905, declined to 80·4 per cent. for each of the years, 1906 and 1907, to 78·9 per cent. for the year 1908, to 78·3 per cent. for the year 1909, and further declined to 77·3 per cent. for the year 1910.

Measles.—The year under notice presents a mortality from measles of 431 deaths, representing an annual rate of 0·10 per 1,000 of the population of Ireland estimated to the middle of the year 1911. The deaths are considerably below the average (668) for the 10 years 1901-1910. The distribution of the mortality from measles can be seen in the abstract commencing on page 140, by Provinces, Counties and Unions. There it will be seen that of the total deaths, 186 were registered in Dublin county borough, and 21 in the union of Cork. Of the total deaths, 235 were of males and 196 were of females. Regarding the relation of age to mortality from measles it appears that out of the total deaths, 85 were under one year of age, 167 were between the ages of one year and 2 years, 70 were between the ages of 2 years and 3 years, 20 were between the ages of 3 years and 4 years, 19 between the ages of 4 years and 5 years, 41 between the ages of 5 years and 10 years, 12 between the ages of 10 years and 15 years, 6 between the ages of 15 years and 20 years, and 11 between the ages of 20 years and 35 years.

Scarlet Fever.—The fatalities from scarlet fever (293) are more numerous in the year 1911 than they have been since the year 1898, when 325 deaths were registered, nevertheless, the recrudesence did not in any respect reach the high figures that obtained from the year 1865 (when 3,683 deaths from scarlet fever were recorded) to the year 1885 when 1,147 deaths were registered. The 293 deaths are equal to an annual rate of mortality of 0.07 per 1,000 from the disease. Of the deaths, 149 were of males and 144 were of females. It may be seen in the abstracts that in the 1st year of life only 8 infants died from scarlet fever. Referring to the distribution of the mortality from the disease, 76 deaths were registered in Dublin county borough, 14 in Belfast county borough, 12 in the union of Larne and 28 in the union of Lisburn.

Whooping-cough.—The rate which represents the 815 deaths which were caused by whooping-cough is 0.19 per 1,000 of the population of Ireland estimated to the middle of the year 1911. The deaths are below the average (1047) and with the exception of the years 1900, 1905 and 1907 the lowest on record; in the former year 689 deaths and in the latter 581 and 809 deaths were respectively registered. The principal incidence of mortality from whooping cough was as follows:—in Dublin county borough, 159 deaths; in Belfast county borough, 85 deaths; in Castleblayney union, 19 deaths; in Clones union, 11 deaths; in Cork union, 44 deaths; in Enniskillen union, 10 deaths; in Ennistymon, union, 12 deaths; in Granard union, 10 deaths; in Londonderry union, 75 deaths; in Lurgan union, 18 deaths; in Nenagh union, 15 deaths; in Sligo union, 12 deaths; in Strabane union, 14 deaths; and in Wexford union, 15 deaths. Of the total deaths, 369 were of males and 446 were of females.

Diphtheria.—The deaths from diphtheria (381) are above those of the preceding year, and also above the average (354) for the preceding decade, and correspond to an annual mortality rate of 0.09 per 1,000. There were of males 187 and of females 194 deaths and there were moreover 94 deaths attributed to *croup* regarding which enquiries were made when feasible, which did not elicit further information; it is a matter of regret that ill-defined terms should continue to be used in *medical* certificates of death. Of the total deaths from diphtheria, 96 were registered in Dublin county borough; 17 in Belfast county borough; 12 in Coleraine union; 15 in Cork union; 21 in Dundalk union; 11 in Larne union; and 21 in Lisburn union.

Influenza.—Since the year 1890 influenza mortality has been an important but varying factor in the Irish death rate, the highest recorded rate was 1·05 in the year 1900, when 4,677 deaths were registered, and the lowest 0·16 in 1896, when 729 deaths were registered. The number for the year 1911 is 992, a figure that corresponds to an annual rate of mortality of 0.23 per 1,000. Although apparently deaths occurred in 1911 at all ages from influenza, they became more numerous in advancing age periods, the largest number, 315, occurring between the ages of 65 and 75. As regards the mortality and sexes there were 449 deaths of males and 543 deaths of females registered.

In the table overleaf the number of deaths from influenza by ages and sexes is given for the provinces and counties of Ireland, also the mortality per 10,000 for the total males and females for each province and county. It appears that the rates ranged from 0·67 per 1,000 in Donegal, the highest to 0.04 per 1,000 in the county of Kerry, the lowest.

TABLE XII.—Showing, by Provinces, Counties, &c., the number of Deaths registered in Ireland from Influenza at each of five Age-Periods during the year 1911, with the rate per 10,000 of the population* represented by the deaths at all ages.

* See note (*) on page vii.

Diarrhoea & Enteritis under two years.—In the aggregate the deaths of 2,166 children are assigned to the title "diarrhoea and enteritis"; the above total is equal to an annual mortality rate of 0·50 per 1,000 from these diseases. On referring to the abstract it will be seen that more than half of the deaths under notice occurred in the county boroughs of Dublin and Belfast, that 111 deaths were registered in Cork union; 37 in Limerick union; 46 in Londonderry and 60 in Waterford. The high mortality amongst infants from diarrhoea in urban centres is one of the most important subjects for the consideration of sanitarians, and one which has been capably grappled with in Dublin by the collaboration of Her Excellency the Countess of Aberdeen (with her usual self-sacrifice, courage, and forethought), and the Dublin Infantile Mortality Committee, working under the early Notification of Births Act in conjunction with the Public Health Committee of the Corporation of Dublin, during the exceptionally hot summer of the year 1911.

Pneumonia.—Under the title pneumonia, there are grouped deaths occurring from broncho-pneumonia, lobar-pneumonia and deaths returned from *pneumonia* (type not distinguished). Altogether 3,905 deaths were severally returned under these headings, the total representing an annual mortality rate of 0·89 per 1,000 from these diseases, as against 4,169 such deaths in the year 1910, equal to an annual rate of 0·95 per 1,000. The total includes 1,232 deaths from broncho-pneumonia, 307 deaths from lobar-pneumonia, and 2,366 deaths from *pneumonia* (type not distinguished). Of the deaths from pneumonia (all forms) 2,304 were of males and 1,601 were of females.

In Diagram 2 it will be seen that pneumonia is the fifth of the principal causes of death in Ireland, the deaths from pneumonia constituting about 5·4 per cent of the total deaths from all causes registered during the year 1911.

Erysipelas, etc.—Ninety-five deaths, 55 of males and 40 of females, were classified to erysipelas, 28 to pyaemia (15 of males and 13 of females) and 95 to septicaemia (not puerperal), of males 58 and of females 37.

Rabies (*Hydrophobia*).—There was not one death from rabies registered in the course of the year. There has not been a death from this disease registered in Ireland since the year 1898, in which year 4 deaths were recorded.

Puerperal Septic Diseases.—There were 186 deaths assigned to this title, namely, from puerperal septicaemia 128 deaths, from puerperal pyaemia 10 deaths, from puerperal fever 27 deaths and from phlegmasia alba dolens, embolism 21 deaths (see table on page xxxv) for rates and comparisons with previous years.

Cerebro-spinal Fever.—There was an increase in the mortality from cerebro-spinal fever as compared with the year preceding, namely, from 14 deaths in the year 1910 to 21 in the year 1911, of the latter figure 10 were deaths of males and 11 were deaths of females. In the year 1908 there were 127 deaths from this disease and in the year 1909 there were 46 such deaths.

TUBERCULOSIS.

I have already addressed your Excellency regarding the status of tuberculosis in Ireland in the opening paragraphs of this report. Since the year 1904 in which the recorded death rate from tuberculosis was 2·9 per 1,000 of the population of Ireland, estimated to the middle of the year, the rate has fallen to 2·2 per 1,000 which is the lowest rate as yet presented for Ireland.

Table showing, by sexes, the number of deaths from tuberculous disease registered in each province during the years 1910 and 1911.

	Province.	1910.	1911.	Decrease.	Increase
Males.	Leinster, ...	1,618	1,564	54	—
	Munster, ...	1,225	1,124	101	—
	Ulster, ...	1,600	1,552	48	—
	Connaught,... ...	574	491	83	—
	Total, ...	5,017	4,731	286	—
	Province.	**1910.**	**1911.**	**Decrease.**	**Increase.**
Females.	Leinster, ...	1,449	1,467	—	18
	Munster, ...	1,172	1,070	102	—
	Ulster, ...	1,895	1,884	11	—
	Connaught,... ...	483	471	12	—
	Total, ...	4,999	4,892	107	—
	Province.	**1910.**	**1911.**	**Decrease.**	**Increase.**
Males and Females.	Leinster, ...	3,067	3,031	36	—
	Munster, ...	2,397	2,194	203	—
	Ulster, ...	3,495	3,436	59	—
	Connaught,... ...	1,057	962	95	—
	Total, ...	10,016	9,623	393	—

From the above statement it appears that there has been a decrease of 393 in the number of deaths from tuberculous disease from 10,016 in 1910, to 9,623 in the period under notice.

The following tabular statement shows the total number of deaths from all forms of tuberculous disease in Ireland for each of the years, 1904–1911, with the rates per 1,000 of the population represented thereby, the decrease in the number of deaths as compared with the previous year, and the percentage of such decrease.

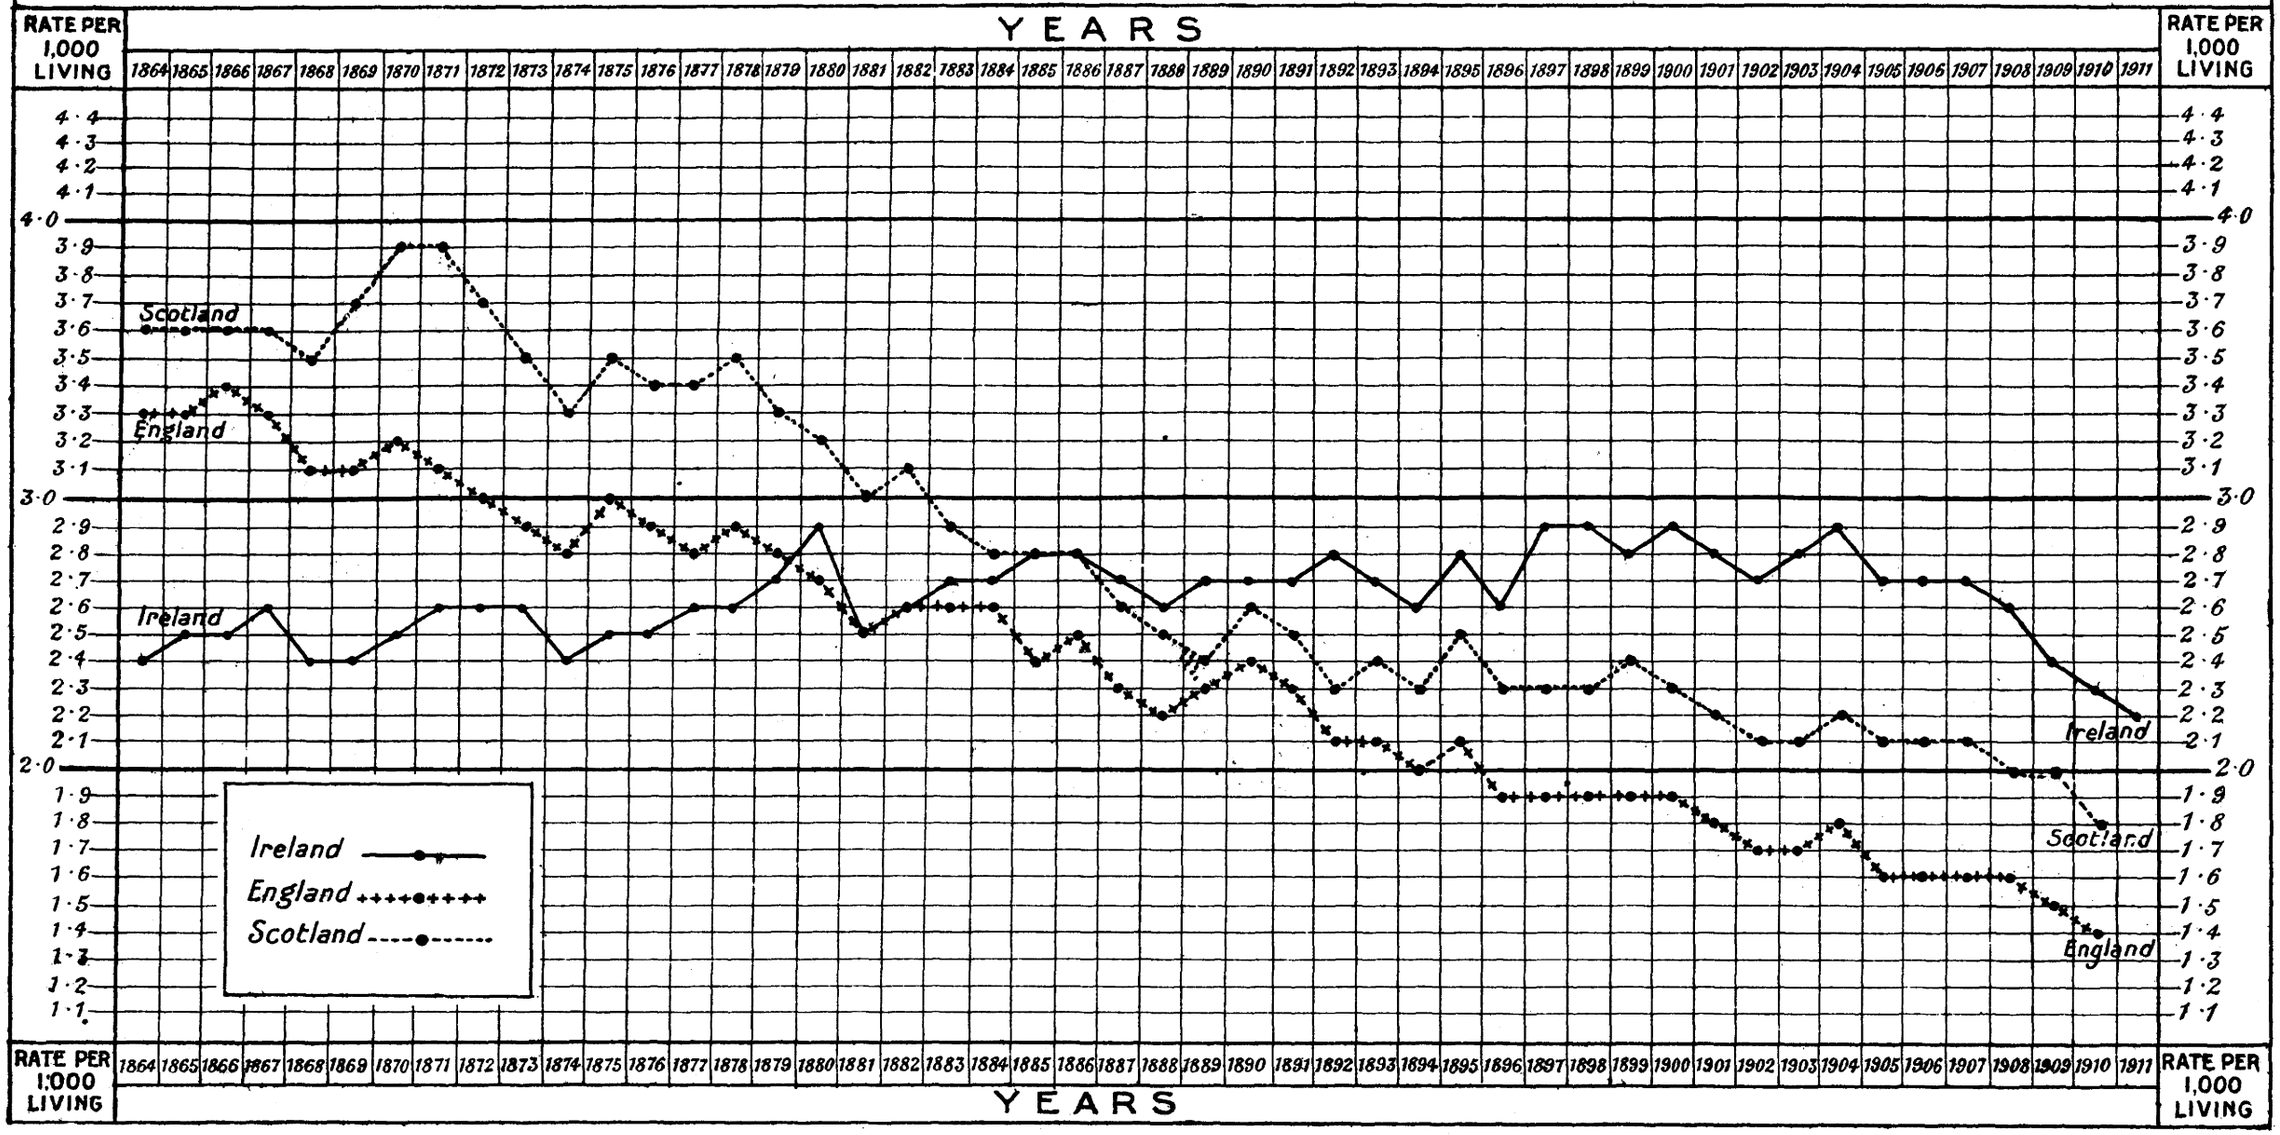
Years.	All forms of Tuberculous Disease.			
	Total Number of Deaths.	Rate per 1,000 of population.	Decrease.	
			Number.	Per cent.
1904, ...	12,694	2·9	—	—
1905, ...	11,882	2·7	812	6·4
1906, ...	11,756	2·7	126	1·1
1907, ...	11,679	2·7	77	0·7
1908, ...	11,293	2·6	386	3·3
1909, ...	10,594	2·4	699	6·2
1910, ...	10,016	2·3	578	5·5
1911, ...	9,623	2·2	393	3·9

It appears from this that the deaths from all forms of tuberculosis numbered 12,694 in the year 1904, and that in the year 1911 the number was 9,623, showing a difference of 3,071 deaths between these years, which difference represents a decrease of more than 24 per cent. in 1911 when compared with the year 1904.

The decline in the mortality rate for tuberculosis in Ireland which has commenced, cannot be disassociated from the foundation of the Women's National Health Association in 1907, and the personality of its Founder who continues to inspire its work. I consider that it is but an act of justice to ask your Excellency's permission to place on a permanent

TUBERCULOSIS.

DIAGRAM No. 4.—Showing the Death-rate in Ireland, as compared with England and Scotland, during each of the forty-eight years 1864-1911.



(7278.) Wt. P.274—26.2.18.875. 7/12. A.T.&Co., Ltd.

To face page XXV

basis, in the Records of this Department, an abstract of the real and permanent work which has been effected, as gathered from the yearly Report of the Women's National Health Association for 1911. The following appear to be the principal features:—

I. There are about 150 branches with about 19,000 members in Ireland.

II. Two garden playgrounds for children have been constructed in the most congested districts of Dublin, out of derelict spaces, and a third is in course of preparation.

III. The establishment of the Collier Memorial Dispensary for the prevention of Tuberculosis, which centralises the work previously carried on by the Dublin Hospital Tuberculosis Committee.

IV. The formation of the Dublin Samaritan Committee in connection with the Dispensary, also of several such Committees in connection with different Branches.

V. The carrying on of the Allan A. Ryan Home Hospital for Tuberculosis patients in the second stage of the disease.

VI. The establishment of the Preventorium at Sutton.

VII. The establishment of the Pasteurized Milk Depot.

VIII. The establishment of numerous Babies' Clubs in Dublin and throughout the country.

The following notes bearing on subjects which are of public importance have been selected from the Registrar's notes which are published in the periodical quarterly reports on the vital statistics of Ireland issued from this office.

1. "The branch of the Women's Health Association and Girls' Guild of same Society are doing valuable work in the district. They have got people to keep their windows open where I failed repeatedly."

2. "I am attending five cases of pulmonary tuberculosis, four of which have returned here from U. S. A. Two of the tuberculosis cases originated outside the district."

3. "One death from phthisis. Two brothers of deceased died from same disease. The number of deaths due to this disease in this district is decreasing. There has been a marked improvement in the sanitation of dwelling houses in this district during the last few years, especially since the Congested Districts Board commenced to make grants towards the improvement of dwellings."

4. "Have had two cases of tuberculosis this quarter in two children—sisters; one, tuberculosis of lungs; second, glandular, in which I traced the source of infection to a milch cow with sore udder, sore teat. Father and mother of children healthy, home very clean and sanitary. No case of phthisis near. Children too young to go to school living in a country house in a breezy upland, yard free from dung or cesspools."

5. "Three cases of pulmonary tuberculosis were imported from outside the district, during the past quarter, but no new cases have occurred *in* the district for the past two years. This I attribute to the healthy dwellinghouses that have been provided for the working classes, the thorough system of domestic scavenging practised in the villages of the district, the careful disinfecting of premises, and to the educational campaign that has been carried on throughout the country."

6. "The health of the district has been remarkably good. Of the seven deaths registered, 5 were 70, 79, 81, 85 and 91 years respectively. There has not been a recent case of tuberculosis of the lungs for the past two years and as far as I know there is not a single case of such either chronic or otherwise. Such a state of things is phenomenal, and I attribute this most satisfactory statement to the better housing of the poor as provided by the District Council, in the way of Labourers' Cottages, improved drainage, &c., and the people being alive to a higher sense of cleanliness and ventilation, and to hygienic laws in general."

A reference to diagram 2, page xiii shows that tuberculosis is still head of the 22 principal causes of death in Ireland—Diagram 4, page xxv shows a comparison between the mortality rate for tuberculosis in England and Wales, Scotland and Ireland—diagram 5 shows the proportion of deaths of males and females registered in Ireland from tuberculous disease at each age period per 1,000 living at these ages for the year 1911—and a map, page xxix has been prepared showing the death rate for all forms of tuberculosis by counties for the year 1911.

In the following table the numbers and death-rates per 1,000 of the population for all forms of tuberculous disease and for pulmonary tuberculosis are given for the years 1901–1911, with annual averages for these years:—

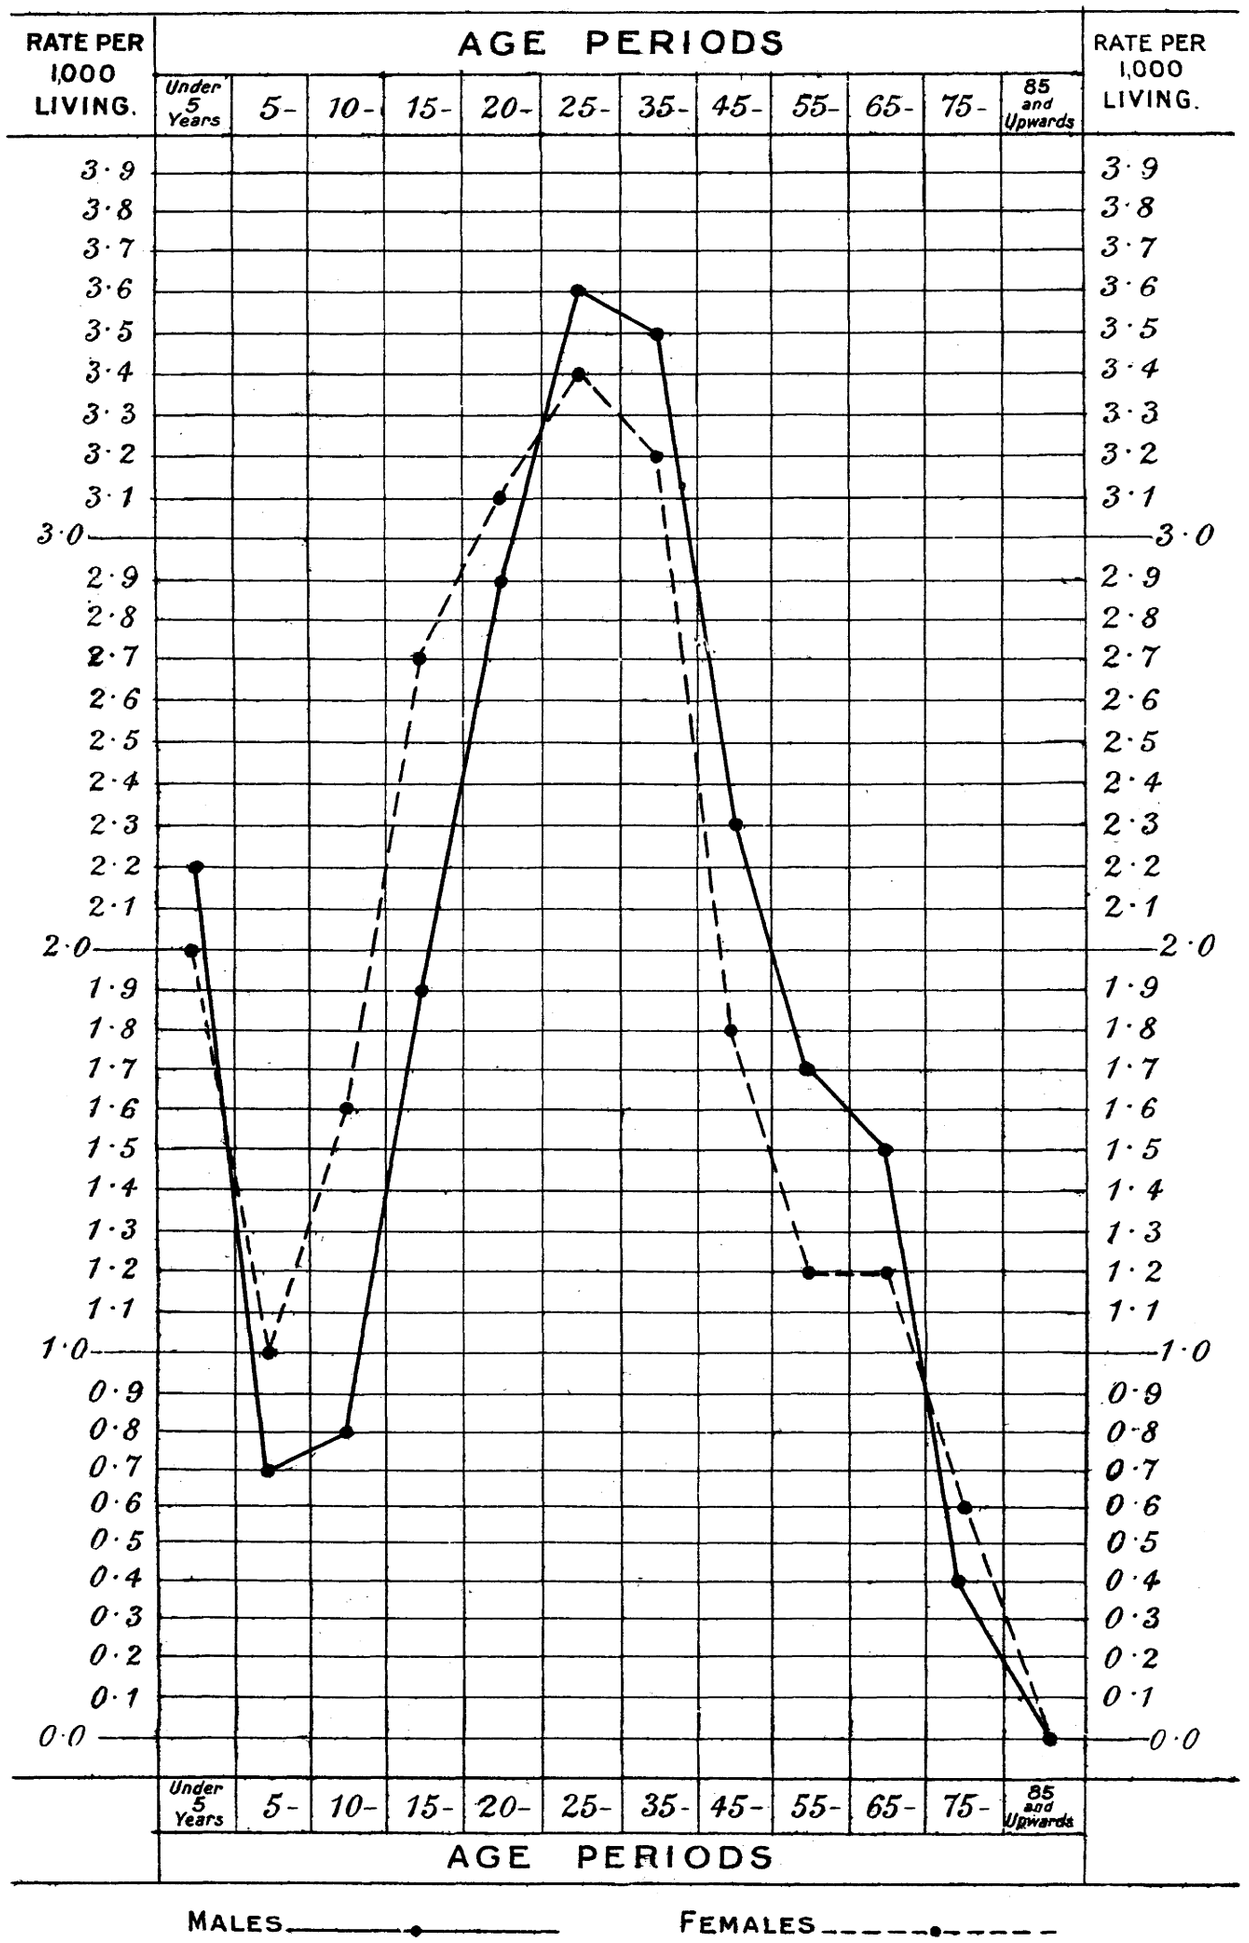
TABLE showing the number of Deaths from all forms of Tuberculous Disease registered in Ireland during the Years 1901–1911, with the number of Deaths from Pulmonary Tuberculosis and the respective rates per 1,000 of the population represented thereby.

YEARS.	Deaths from all forms of Tuberculous Disease.		Deaths from Pulmonary Tuberculosis.	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.
1901, ...	12,335	2·8	9,549	2·1
1902, ...	11,837	2·7	9,400	2·1
1903, ...	12,180	2·8	9,559	2·2
1904, ...	12,694	2·9	9,833	2·2
1905, ...	11,882	2·7	9,216	2·1
1906, ...	11,756	2·7	8,933	2·0
1907, ...	11,679	2·7	8,828	2·0
1908, ...	11,293	2·6	8,511	1·9
1909, ...	10,594	2·4	8,051	1·8
1910, ...	10,016	2·3	7,527	1·7
Averages, 1901–1910,	11,627	2·7	8,941	2·0
1911, ...	9,623	2·2	7,584	1·7

It may be seen that during the above period the high death-rate from all forms of tuberculous disease of 2.9 per 1,000 was reached in the year 1904, but that since that year there has been a gradual decline to 2.2 per 1,000 for all forms of tuberculous disease and to 1.7 per 1,000 for pulmonary tuberculosis.

Pulmonary Tuberculosis.—There is an apparent increase in the number of deaths which come in under this title on account of a change in classification by which deaths returned as from "tuberculosis, not otherwise defined" are classified now under this title having been in previous years assigned to general tuberculosis. These deaths in 1911 numbered 252, and the total including this figure, 7,584, against 7,527 in the year 1910, and an average for the 10 years 1901–1910 of 8,941 deaths. Of the 7,584 deaths, 3,702 were of males and 3,882 were of females, the rates corresponding to the foregoing numbers being 1.70 and 1.77 per 1,000 of the respective populations.

DIAGRAM No. 5.—Showing the Proportion of Deaths from All Forms of Tuberculous Disease of Males and Females registered in Ireland at each age-period, per 1,000 living at those ages, during the year 1911.



(7278.) Wt.P.274—26.2.18.875.7/12.A.T.&Co.,Ltd.

From this table it appears that while there is not much difference in the total death-rate of males and females, in the earlier age periods the female mortality is much greater than that of the male, but that after the 20-25 years age period the male mortality rate considerably exceeds that of the female, with the exception of the period 75 years and upwards, when the female rate again exceeds the male rate.

The following table gives certain information regarding the mortality from tuberculous disease among the several social classes in the Dublin Registration Area for the year 1911, as derived from the Registrar-General's Yearly Summary of the Weekly Returns :—

Class.	Occupation or Social Position.	Annual Rate for the Dublin Registration Area, per 1,000 of the Population in 1901 represented by the Deaths registered in 1911 from		
		All Forms of Tuberculous Disease.	Pulmonary Tuberculosis.	Other Forms of Tuberculous Disease.

	17. Hawkers, Porters, Labourers, &c., ...	4·18	2·80	1·38

It appears from the foregoing table that amongst the professional classes the annual death-rate from tuberculous disease in the Dublin Registration Area was 1·15 per 1,000 of the population according to the Census of 1901; in the middle class the rate was 2·35; amongst the artisans and petty shopkeepers the rate was 3·04, and in the general service class it was 3·56 per 1,000.

Tuberculous Meningitis.—Tuberculous affections of the brain or its membranes was the registered cause of death of 660 persons; of this figure 338 were deaths of males and 322 were deaths of females; the mortality rate was in each case 0.15 per 1,000. When the deaths from tuberculous meningitis are compared with the year 1910 it will be seen that there was a reduction of 41 deaths in the year under notice.

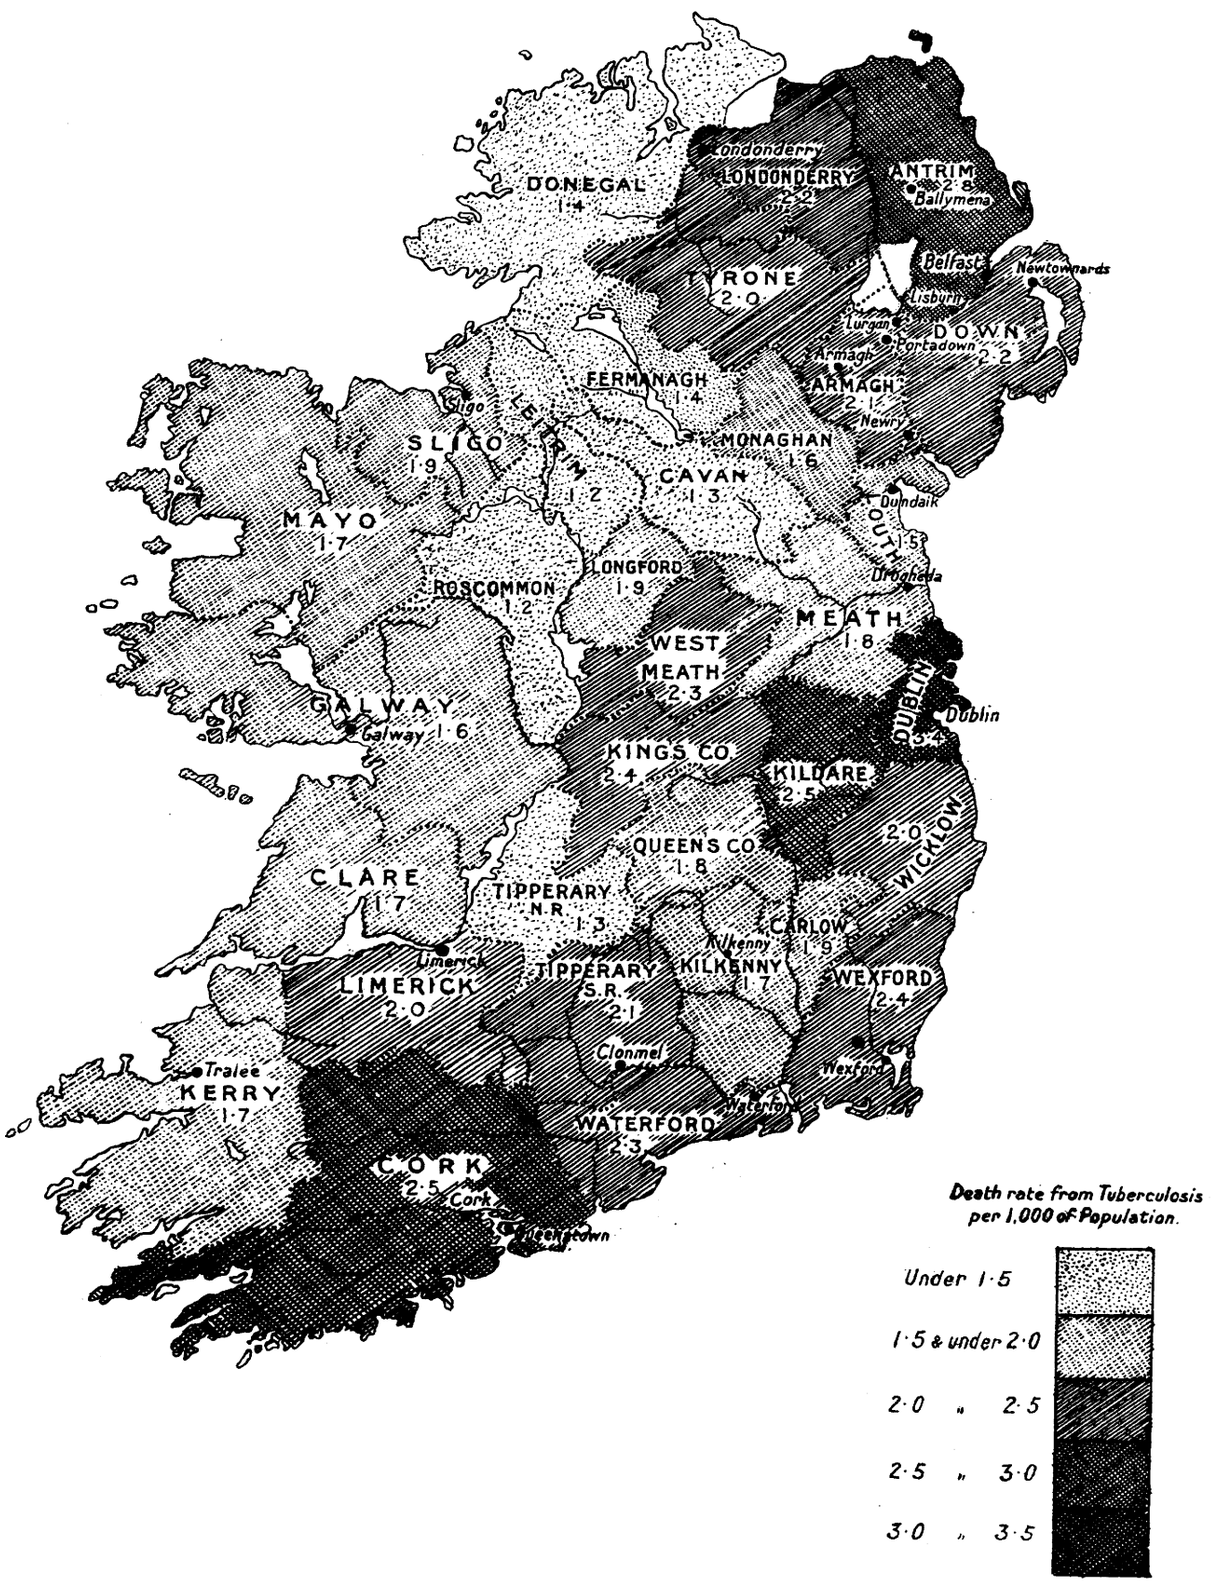
Abdominal Tuberculosis.—Under this general heading deaths from tabes mesenterica tuberculous peritonitis, tuberculous enteritis, and other forms of tuberculous disease of the abdominal viscera are returned; these altogether numbered 551, of which figure 272 were deaths of males and 279 were deaths of females, the rates corresponding to these figures being 0.13, 0.12, and 0.13 per 1,000 of the respective populations.

MORTALITY FROM TUBERCULOSIS.

Rate per 1,000 of the Population, according to the Census of 1911 (Parliamentary Abstract), represented by the deaths from

ALL FORMS OF TUBERCULOSIS

registered in each County of Ireland during the year 1911.



(7278.) Wt. P.274—26.2.18.375 7/12. A.T.&Co. Ltd.

To face page XXIX

Other forms of tuberculosis.—There were 111 deaths from tubercular disease of the vertebral column (of males 48 and of females 63). There were 123 deaths from tuberculous diseases of joints (of males 63 and of females 60), the deaths of 11 persons were attributed to lupus, 13 to scrofula, 131 to tuberculosis of other organs, and 439 to disseminated tuberculosis, the above figures number 828 in the aggregate and correspond to a rate of 0.19 per 1,000, of the above total, 419 were deaths of males and 409 were deaths of females.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Pulmonary Tuberculosis, Tuberculous Meningitis, Tuberculosis of Peritoneum and Intestines. Other Forms of Tuberculosis and from all causes, registered in Ireland in each of the forty-one years, 1871-1911, with the Rate per 1,000 of the Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis, (*b*) Deaths from All Causes; and the percentage of total Deaths caused by the tuberculous diseases referred to.

Cancer.—The total number of deaths classified under the title cancer, was 3,582 as compared with 3,664 such deaths in the year preceding, showing a numerical decrease of 82 deaths. Of the 3,582 deaths, 1,260 were attributed to carcinoma, 169 to sarcoma, and 2,153 to cancer or malignant disease undefined. The rate represented by the total was .82 per 1,000, as compared with .84 per 1,000 in the year 1910. It appears from table IX. that the cancer rate of Ireland was in 1901 .651 per 1,000, it declined to .645 in the year 1902, rose to .690 in 1903, rose again slightly to .693 in 1904, again rose to .749 in 1905, and to .792 in 1906, from this it declined to .761 in 1907, and again .757 in 1908, rising in 1909 to .800, and again rising in 1910 to .837 the highest recorded cancer rate in Ireland, and declined again in the year under notice to .819 deaths per 1,000 of the estimated population of Ireland. Of the total deaths, 1,778 were of males and 1,804 were of females, corresponding to the respective rates of 0.815 and 0.819 per 1,000 of the male and female populations. In diagram 2 it may be seen that cancer stands sixth among the principal causes of death in Ireland.

Table 15 on page xxx shows the deaths from cancer by age and sex arranged according to the parts of the body which were affected.

TABLE XV.—Showing the Deaths registered from Cancer* in Ireland during the year 1911, by Sexes, Ages, and parts affected.

DISEASES OF PARTICULAR ORGANS.

Rheumatism.—Of the various conditions ascribed to rheumatism, 144 deaths were caused by acute rheumatism, rheumatic fever—of males 79 and of females 65, there were 98 deaths from rheumatic arthritis—of males 30, and of females 68, to rheumatism of the heart 74 deaths were classified—of males 24, and of females 50, there were 408 deaths from chronic rheumatism—of males 175, and of females 233, and there were 10 deaths from osteo-arthritis—of males 4, and of females 6, altogether these deaths number 734 and are equal to an annual rate of 0.17 per 1,000 of the estimated population.

Gout.—Seven deaths—of males 5 and of females 2, were attributed to gout, and 9 deaths —of males 4, and of females 5, were attributed to rheumatic gout.

Diabetes.—Caused the deaths of 396 persons, of this figure 203 were deaths of males and 193 were deaths of females, in the year 1909 diabetes caused 331 deaths rising in the year 1910 to 381 deaths.

Alcoholism.—The mortality directly returned as being due to alcohol shows a decline from 122 deaths in 1910 to 112 deaths in 1911 ; this follows a decline from 173 deaths in 1909. Although these figures do not really represent the number of deaths indirectly due to the abuse of alcoholic stimulants, they do indicate that an improvement in this regard has taken place in Ireland, particularly when read in conjunction with the report of the number of arrests by the police for drunkenness, which are decreasing substantially. [Vide Judicial Statistics, Ireland, 1910, Vol. I.]

Deaths from cirrhosis of the liver numbered 300, of these 194 were of males and 106 were of females. In the year 1909 such deaths were 331, and in the year 1910 there were 262 such deaths.

There were 4 deaths from acute alcoholic poisoning, not included in above totals. [Vide Poison Table, page xxxvii.]

Of the total deaths from alcoholism, 22 were associated with accidents while under the influence of drink.

Meningitis.—The number of deaths from meningitis was 607, of this number 324 were deaths of males, and 283 were deaths of females, there were also 31 deaths attributed to encephalitis, of males 19, and of females 12.

General paralysis of the insane.—With the desire of obtaining accuracy regarding the mortality from this important disease, special enquiries have been made, when the cause of death has been given as *general paralysis*, asking whether the death was caused by general paralysis of the insane. During the year under notice 89 deaths were registered from this disease, of these 69 were deaths of males, and 20 were deaths of females; the corresponding figure in 1909 was 97, and in 1910 it was 75.

Epilepsy.—The figures for epilepsy show a small increase in the year 1911 from 267 deaths in 1910 to 276 in the year under notice; of the total in 1911 there were 160 deaths of males and 116 of females.

Convulsions.—In the nomenclature of diseases and causes of death which was published in the year 1906 under the auspices of a joint committee appointed by the Royal College of Physicians of London, on page 31 the following comment regarding the use of the term *convulsions* as a cause of death in a medical certificate appears.—"*This term being the name of a symptom should only be used when more precise information is wanting. When the cause is known the return should be made under the head of that cause.*"

Notwithstanding this expression of opinion, in the returns for Ireland in the year 1911 the deaths of 1,139 persons are referred to *convulsions*, of these 945 were infants under one year of age, this latter number constitutes 9.9 per cent of infant mortality from all causes.

In the year preceding such deaths were 9.6 per cent. of infant mortality from all causes, and in the year 1909 the percentage was 10.

Locomotor ataxy.—There were 53 deaths from locomotor ataxy as compared with 45 in the preceding year, of the 53 deaths, 44 were of males, and 9 were of females.

Tumour of Brain.—The number of deaths from tumour of brain, the nature of which could not be ascertained, was 29. Enquiries caused 19 deaths originally referred to the above cause to be finally classified as follows:—to cancer, 8; to tuberculosis, 8; to syphilis, 2; and to bone disease one death.

Diseases of the heart.—Altogether the number of deaths which were stated to be caused by diseases of the heart was 7,536, this total does not include 298 deaths from syncope, and 1,363 deaths from heart failure or old age and heart failure. Of the total 7,536, there were 4,244 deaths which were attributed to unspecified heart diseases and 3,267 in which the disease or condition was defined, e.g., 29 deaths from pericarditis, 66 from myocarditis, 20 from infective endocarditis, 17 from acute endocarditis, 74 from endocarditis under 60 years of age, 249 from fatty degeneration of the heart, 2,476 from chronic endocarditis valve disease, 18 from hypertrophy of heart, 238 from dilatation of heart, and 80 from angina pectoris.

The deaths represent an annual death-rate of 1.72 per 1,000, and are rather over 10 per cent. of all deaths registered in Ireland in the year 1911.

Laryngitis & croup.—One hundred and five deaths were from laryngitis, 6 from other iseases of the larynx, and 94 from croup. See par. 4, Diphtheria, page xxi.

Bronchitis.—During the year under notice 6,516 deaths were caused by bronchitis, either acute or chronic. This figure represents an annual death-rate of 1.49 per 1,000, and forms 9.0 per cent. of all deaths registered in the year 1911. In the preceding year deaths from bronchitis amounted to 7,455.

Pleurisy.—There was a decrease of 24 in the number of deaths which were directly attributed to pleurisy, namely, from 178 in 1910 to 154 in the year 1911. Of the deaths in 1911, 90 were of males, and 64 were of females.

During the 8 years from 1904 to 1911 inclusive, the deaths of 215 persons were returned as having been directly caused by empyema. These deaths having been made the subject of special enquiry, have been transferred to their specified causes in the following table in such cases as further information became available.

Table showing for the years 1904–1911, by age-periods, the diseases or causes with which the deaths directly attributed to Empyema of 215 persons (159 males and 56 females) were associated.

Diseases or causes (by Age-Periods) with which 159 Deaths of Males from Empyema were associated.

Not ascertained, ...	21	–	2	–	–	–	2	3	–	4	2	5	3	1	1	–	–	–	–

It will be observed from the above that of the 215 deaths from empyema registered during the period covered by the table, the deaths of 75 persons were found to be associated with tuberculous disease, 56 of these being deaths of males and 19 of females.

Gastric ulcer.—Of 329 deaths caused by gastric ulcer, 138 were of males, and 191 were of females. In the year preceding the deaths from this condition numbered 291, of males 135, and of females 156.

Appendicitis & Perityphlitis.—The figures for the year, 175, only differ by one death from those of the year 1910, during which year 174 deaths were registered. Of the 175 deaths, 90 were of males, and 85 were of females.

Cirrhosis and other diseases of the liver.—In the paragraph on alcoholism on page xxxi., it is stated that the number of deaths from cirrhosis of the liver was 300, there were moreover 46 deaths from gall-stones, 3 deaths from malignant jaundice, and 183 deaths from other diseases of the liver.

Peritonitis.—Deaths returned as being caused by peritonitis were made the subject of a special enquiry regarding the cause of the condition. Of 155 deaths originally returned as peritonitis, 78 were finally classified to a more definite cause, e.g., 14 to appendicitis, 16 to gastric ulcer, 10 to tuberculosis, 7 to obstruction of intestines, 5 to accidental violence, 4 to cancer, 3 to excessive cold, and 2 to food poisoning.

Diseases of the kidneys.—The deaths from diseases of the kidneys include 389 deaths from acute nephritis, 1,106 deaths from chronic Bright's disease, 58 deaths from uraemia, and 75 deaths from other diseases of the kidney, in all 1,628 deaths, equal to an annual rate of 0·37 per 1,000, and more than 2 per cent. of all deaths registered in Ireland during the year.

Diseases and accidents of pregnancy and childbirth.—As mentioned in a preceding paragraph vide page xxiii., the number of women who succumbed to puerperal septic conditions was 186, corresponding to a mortality rate of mothers of 1·83 per 1,000 births registered. In addition to the above deaths it would appear from the abstract, page 127, that there were 29 deaths from accident of pregnancy, 100 deaths from puerperal hæmorrhage, 140 deaths from other accidents of childbirth, 15 deaths from puerperal albuminuria, 39 deaths from puerperal convulsions, and 5 deaths from puerperal insanity, making a total of 328 corresponding to a mortality rate of 3·23 mothers to every 1,000 births registered. There is another class of mortality connected with pregnancy and child birth, namely, that which is complicated with pre-existing disease, to which latter the death is assigned in the process of tabulation, such deaths are however classified separately so that they can be incorporated in a special table (see next page) which shows the total mortality connected with the puerperal condition, namely;—(1) mortality from septic conditions, (2) mortality from intrinsic causes, and (3) mortality from pre-existing disease or condition complicating pregnancy and child birth.

TABLE XIII.—Deaths of Women in Ireland in 1911 definitely returned as either caused by or associated with Pregnancy or Childbearing.*

* These deaths are included in the general tables of Causes of Death.

The following table shows for each of the years 1903-1911, the number of deaths from each of the three conditions under which deaths of women occur during pregnancy or childbirth, and also the rate per 1,000 births registered during each of these years, with an average rate for the 8 years, 1903-1910 :—

Years.	Deaths from Puerperal Septic Diseases.		Deaths from Accidents of Pregnancy or Childbirth.		Total Deaths from Puerperal Septic Diseases and Accidents of Pregnancy or Childbirth.		Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing).		Total Deaths caused by or associated with Pregnancy or Childbirth.	
	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births	Number	Rate per 1,000 Births
1903, ...	233	2·29	340	3·34	573	5·63	84	0·82	657	6·45
1904, ...	216	2·08	367	3·54	583	5·62	99	0·95	682	6·57
1905, ...	227	2·21	346	3·36	573	5·57	83	0·81	656	6·38
1906, ...	234	2·26	373	3·60	607	5·86	69	0·67	676	6·53
1907, ...	163	1·60	342	3·36	505	4·96	84	0·83	589	5·79
1908, ...	189	1·86	341	3·34	530	5·20	85	0·83	615	6·03
1909, ...	222	2·16	339	3·30	561	5·46	83	0·81	644	6·27
1910, ...	191	1·87	351	3·44	542	5·31	64	0·63	606	5·94
Average, 8 years, 1903-10	209	2·04	350	3·41	559	5·45	81	0·79	640	6·24
1911, ...	186	1·83	328	3·22	514	5·05	64	0·63	578	5·68

It appears from the foregoing that the deaths from puerperal causes were 28 under the number registered in the year 1910, and were 62 under the average for the 8 years, 1903–1910. The rates per 1,000 births corresponding to the total figures for the year 1911, the year 1910, and the average for the 8 years, 1903–10, were 5·68, 5·94, and 6·24 respectively.

Ill-Defined or not Specified Causes of Death.

The following terms should not be used for denoting the cause of death where it is possible to employ a more definite cause:—Dropsy, syncope, sudden death, heart failure, atrophy, debility, marasmus, teething, pyrexia, croup, paralysis (without specified cause), old age.

Uncertified Causes of Death.

Of the total deaths 22·59 per cent were registered as being uncertified, or not being medically attended. In the year 1908 such deaths were 25 per cent. of all deaths registered, in 1909 24·29 per cent., and in the year 1910 the percentage of uncertified deaths was 24.30. The percentage of uncertified deaths in the province of Leinster in the year under notice was 15·87, in Munster it was 25·82, in Ulster 17·79, and in Connaught 48·27 per cent. of all deaths registered.

In England and Wales in the year 1910 it was 1·38 and in Scotland 2·08 per cent. in 1909.

Violence.—Deaths resulting from suicide, accident, homicide, and execution are grouped under the title "violence." Altogether these numbered 1,939, including 149 deaths by suicide (of males 114, and of females 35), by accidental violence 1,746 (of males 1,125, and of females 621), by homicide 43 (of males 26, and of females 17) and there was one death by execution of a male.

Among the principal causes of death by accidental violence, there were 499 deaths by traumatism, 455 by burning (of this figure 214 were children under 5 years of age), 262 were by drowning, 80 were by absorption of deleterious gases, 52 were by excessive cold, and 19 were by effects of heat, there were 30 deaths from acute poisoning, 8 deaths were due to poisoning by food, and 30 deaths resulted from injuries by animals.

The particulars regarding deaths by poisoning are given in Table XVI. page xxxvii.

Inquests.

There were 1,670 inquests returned by the Registrars during the year 1911, or one inquest in every 43 deaths registered.

AGES AT DEATH.

The following statement shows, by sexes, the mortality from all causes in Ireland during the Year 1911, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

Sexes.	Mortality from all causes per 1,000 Living at Ages.

* See page xxxi.

AGES AT DEATH—*continued.*

Of the 72,475 deaths in 1911, 14,134 were those of children under 5 years of age, which number is equivalent to a rate of 32·53 in every 1,000 of the number living at that age. Of the deaths under 5 years of age, 7,648 were of boys and 6,486 of girls; representing respectively, 34·30 in every 1,000 boys, and 30·67 in every 1,000 girls, under the age of 5 years.

The deaths of persons aged 65 years and upwards are equivalent to 104·98 per 1,000 of the number of the living at that age, the rate for deaths at the age-period, 65–75 years, being 78·81 per 1,000 and for deaths of persons aged 75 years and upwards it was 158·42 per 1,000 of the living at that age-period.

Of the total deaths registered, 496 were those of persons stated to have been aged 95 years or upwards—230 males and 266 females, including 113 (50 males and 63 females) who were returned as having been aged 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found that the age was correctly stated, in almost every instance, so far as the Registrars could ascertain.

INFANT MORTALITY.

The number of deaths registered of infants under one year of age was 9,555 for the whole of Ireland; of this 5,322 were deaths of male infants and 4,233 were deaths of female infants. The total represents a rate of 93·9 per 1,000 of all births registered in the year and is over 13 per cent. of all deaths registered. In the preceding year the infant mortality rate was 95 per 1,000 births, and the average infant mortality rate for the 10 years ending with 1910, was 96 per 1,000 births.

In England and Wales the infant mortality, which was 109 per 1,000 in 1909, declined to 106 per 1,000 in the year 1910; in Scotland the infant mortality in 1909 was 108 per 1,000, and in Ireland in that year it was 92 per 1,000 births registered.

In the following table the infant mortality rate is given by sexes, for "Civic" unions, *i.e.*, unions containing towns which, in the year 1901, had a population of 10,000 or upwards, and for the remaining unions of Ireland; the rates at certain age-periods are also given in the table.

Table showing for Ireland, for Unions containing towns which, in 1901, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, the proportion of deaths of infants by sexes at the undermentioned ages, per 1,000 births registered in the year 1911.

AREAS.	MALES.				FEMALES.				TOTAL.			
	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.
Total "Civic Unions."	76·9	28·3	34·4	139·6	59·8	24·6	32·0	116·4	68·6	26·5	33·3	128·4
Remainder of Ireland.	49·5	12·5	14·1	76·1	40·0	11·5	13·9	65·4	44·9	12·0	14·0	70·9
Total of Ireland.	60·4	18·8	22·2	101·4	47·9	16·8	21·1	85·8	54·4	17·8	21·7	93·9

It appears from above that for Ireland the infant mortality rate was 93·9 per 1,000, that in the "civic" unions it was 128·4 per 1,000, and that in the remaining unions of Ireland it was 70·9 per 1,000; in the year 1910 the figures for the "civic" and remaining unions were 123·1 per 1,000, and 75·5 per 1,000 respectively. The comparison shows that there was an increase in the mortality in the "civic" unions, and a decrease in rural unions of Ireland.

The statement below gives the infant mortality in the Dublin Registration Area and Belfast compared with that of London, Liverpool, Edinburgh and Glasgow for a period of 10 years.

Table showing the number of deaths of infants under one year of age to every 1,000 births in the Dublin Registration Area, in the county borough of Belfast, and in London, Liverpool, Edinburgh and Glasgow, during the years 1902-1911.

Areas.	Deaths of Infants under one Year of Age to every 1,000 Births.									
	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.
Dublin Registration Area,	162	151	169	143	146	156	146	141	142	156
Belfast County Borough,	151	134	154	136	144	136	147	139	143	128
London, ...	140	130	145	130	131	116	113	108	103	128
Liverpool, ...	163	159	196	153	172	144	141	144	140	154
Edinburgh, ...	122	121	130	133	118	127	122	119	111	118
Glasgow, ...	130	144	146	131	131	130	137	133	121	139

From this it appears that in each of these areas there was an increased infant mortality, except in that of Belfast County Borough, where the rate declined from 143 per 1,000 births in the year 1910 to 128 in the year 1911. The increased mortality in Dublin and the other cities was most probably due to the excess of deaths from epidemic diarrhœa in 1911.

The causes of the deaths of infants are given in detail in the abstracts commencing on page 120. These causes are summarised in the table which follows, in which deaths from certain causes are grouped together. The deaths are given in 3 groups of age-periods, namely, under 3 months, from 3 months to 6 months, and from 6 months to 12 months.

Table showing for Ireland the Mortality by certain causes among infants under 12 months old, per 1,000 Births registered in the Year 1911, distinguishing between those under 3 months old, 3 months and under 6 and 6 months and under 12.

Other Causes, ...		3·69	0·95	1·62	6.26

From the foregoing table it appears that the mortality rate of infants under 3 months old was 54·36 per 1,000 births registered; at 3 months of age and under 6 months it was 17·82 per 1,000; and between the ages of 6 months and one year it was 21·71 per 1,000 of all births registered.

Regarding the principal causes of infant mortality one-third of the infant mortality is attributed to a group—wasting diseases—which includes deaths from prematurity, congenital malformations, want of breast milk, and *atrophy*, *debility*, and *marasmus*. Diarrhœa and intestinal complaints cause an infant mortality rate of 20·0 as compared with 12·2 in the preceding year per 1,000 births registered; bronchitis accounts for 8·4 deaths per 1,000 births registered, convulsions for 9·3 and pneumonia for over 4 per 1,000 births registered. Among the common infective diseases whooping-cough is the most fatal, causing over 3·5 deaths per 1,000 births, and measles comes next, causing 0·84 deaths per 1,000 of all births registered. The infant mortality attributable to all forms of tuberculous disease is 3·0 per 1,000 of all births registered in Ireland during the year 1911 as compared with 3·3 in the year 1910.

A table on page xliii gives statistics for 22 town districts of Ireland and is derived from the Yearly Summaries of the Registrars' Returns for the years 1907–1911, inclusive. It will be seen that the infant mortality rate for the year 1911 for these districts in the aggregate was 136 per 1,000 births registered.

The highest rate was in Newtownards, namely, 190; in Waterford, it was 157; in Wexford, 167; in Dublin Registration Area, 156; in Cork, 139; and in Belfast, 128. The lowest infant mortality rates were as follow:—in Galway, 72; in Tralee, 87; in Drogheda, 90; in Portadown, 94; in Clonmel, 98; and Dundalk, 99.

OCCUPATIONAL MORTALITY.

In the table on pages xlii. and xliii., as published in the Registrar-General's Yearly Summary of the Weekly Returns, the mortality in 1911 among the several social grades of the population of the Dublin Registration Area is shown.

This table shows that among the families of the Professional and Independent class the annual death-rate from all causes was 16·3 per 1,000 of the population in 1901; among the Middle class it was 16·5; among the Artisan class and Petty Shop-keepers the rate was 18·2; and among the General Service class it was 24·8 per 1,000.

EMIGRATION.

From the returns collected and forwarded to this Department by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, it appears that the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1911 was 30,573, of whom 16,671 were males and 13,902 females. Of the whole number, 4,195 were natives of the province of Leinster, 7,683 of Munster, 12,032 of Ulster, and 6,663 of Connaught.

Of the total emigrants from Ireland in 1911, 7·6 per cent. were under 15 years of age, 85·7 per cent. were between 15 and 35 years old, and 6·7 per cent. were 35 years or upwards.

TABLE showing for each of the undermentioned Twenty-two Town Districts of Ireland for the 5 Years, 1907-11, the Number of Births registerd, the Number of Deaths of Infants under One Year of Age to every 1,000 Births registered and the Death-rate at all Ages per 1,000 of the Population.

[The Deaths are exclusive of those occurring in Public Institutions of persons admitted, and also of Infants whose mothers were admitted from places outside the respective areas, and the rates are based on the numbers so determined.]

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1911 was 6*d.*, the average price in the year 1910 being also 6*d.** Oatmeal (1st quality) averaged 13*s.* 8*d.* per cwt. in Dublin, the average price for 1910 being 13*s.* 11*d.*; the average prices of potatoes in Dublin ranged from 3*s.* 4*d.* to 3*s.* 11*d.* per cwt., as against 3*s.* 3*d.* to 3*s.* 9*d.* in 1910; and those of beef from 54*s.* 6*d.* to 59*s.* 6*d.* per cwt., as compared with 54*s.* 6*d.* to 61*s.* in 1910.

TABLE XVII.—AVERAGE PRICES in DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1901–1911, and the AVERAGE NUMBER OF PERSONS IN IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS, and the AVERAGE NUMBER OF PERSONS in RECEIPT OF RELIEF during each quarter of the year 1911.

*Prices derived from returns received from Messrs. Bolands, Limited, and Messrs. Johnston, Mooney and O'Brien, Limited.

†Compiled from Returns furnished by the Local Government Board.

‡Not including those relieved by means of works devised for the relief of distress, viz.:—an average of 3,180 in First Quarter, 13,656 in Second Quarter and 2,048 in Third Quarter of 1905, and an average of 1,062 in First Quarter, 7,199 in Second Quarter, and 2,645 in Third Quarter of 1908.

From the foregoing table it appears that in the year 1905 the prices of beef were lowest, when the average ranged from 48*s.* 6*d.* to 54*s.* 6*d.* per cwt.; bread was cheapest in the year 1901, when the average price (1st quality delivered) was 5¼*d.* per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1901, in which year the average price was 13*s.* 4*d.* per cwt.; and potatoes in 1905, when the average range of prices was from 2*s.* 7*d.* to 3*s.* 2*d.* per cwt. The highest price of bread was in the year 1909, when the 4 lb. loaf averaged 6¼*d.*, and in the year 1908 the price of oatmeal was highest, viz., 15*s.* per cwt. The highest rate for potatoes was from 4*s.* 0*d.* to 4*s.* 6*d.* per cwt. in 1907, and for beef from 55*s.* 6*d.* to 59*s.* 6*d.* per cwt in 1902.

The Commissioners of the Local Government Board for Ireland have kindly furnished me with the returns contained in this Report relating to Pauperism in Ireland, for which I desire to express my thanks. It would appear from these returns (see Table XVII.) that the average number of workhouse inmates in Ireland on Saturdays during the year 1911 was 38,465, being 3,158 below the average for the preceding year; and that the average number of persons receiving out-door relief was 39,459, or, 5,200 below the corresponding number for 1910.

THE WEATHER.

The information which follows and also that given on pages 151–174 is presented, as heretofore, through the kind permission of the Editors of the "Dublin Journal of Medical Science," having been extracted from returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.P.H., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC., D.L., Hon. Physician in Ordinary to His Majesty the King in Ireland; and published in the Journal during the years 1911-1912. The tables on pages 175-177 have also been compiled from Sir John Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1911 was 29·956 inches. The highest observed reading was 30·801 inches at 9 P.M. on February 1st. The lowest observed reading was 28·729 inches, at 9 P.M. on December 10th. The extreme range of atmospherical pressure was 2·072 inches, as compared with 2·357 inches in 1910.

The *Mean Temperature* of the air for the year was 51·0°. The highest reading was 78·2° on July 13th, and the lowest reading was 26·8° on February 1st. The average mean temperature for the years 1891–1910, was 50·0°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50·2°.

Rain fell on 189 days, including snow or sleet on 4 days and hail on 20 days. The average annual number of rainy days in the years 1891–1910, was 199·1. The total rainfall measured 23·477 inches, compared with an average of 27 513 inches in the twenty years, 1891–1910. During the first half of 1911 (January to June, inclusive) the rainfall was 7·729 inches on 80 days; during the second half (July to December, inclusive) 15·748 inches fell on 109 days.

As regards the *Direction of the Wind,* 1,095 observations were made during the year, with this result—N., 72; N.E., 133; E., 115; S.E., 65; S., 87; S.W., 175; W., 275; N.W., 117; Calms, 56.

Before concluding my Report I wish to record my indebtedness to Dr. Ninian M. Falkiner, the Superintendent of Vital Statistics in this Department, under whose personal supervision the several entries have been tabulated. The accustomed care and efficiency which he has devoted to the work add materially to the accuracy and utility of the Statistics.

I have the honour to be,

Your Excellency's faithful Servant,

WILLIAM J. THOMPSON,
Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
DUBLIN, *5th July,* 1912.

ANNUAL ABSTRACTS

OF

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1911.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1911.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Population, 1901.	TOTAL.			BIRTHS				DEATHS.		Excess of Births over Deaths.
				MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances. See note (*), pp. 4-5.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1911—REGISTRARS' DISTRICTS arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS.—*continued.*

NOTE.—This Table has been constructed for the years 1837 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872 to 1911—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872–81, 1882–91, 1892–1901, and 1902–1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911, respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, and 1901.

Periods.	Sexes.	AGES—YEARS. Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.	Total.

* In 3,838 instances in 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 2,996 instances in 1881, viz., 1,765 males, and 1,231 females; and in 1,786 instances in 1891, viz., 852 males, and 934 females, the age was not stated in the Returns

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1911.

By Sir John W. MOORE, Honorary Physician in Ordinary to His Majesty the King in Ireland, B.A., M.D., DUBL.; D.SC., OXON.; F.R.C.P.I.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*).

January.—A generally fine, dry, but cloudy month, with an average temperature and very high mean atmospheric pressure connected with an anticyclonic tendency over Central Europe and France. On the other hand, cyclonic conditions were dominant in Icelandic and Arctic regions, so that a mild S.W. air-current often passed across Ireland, Scotland, and Norway, whereas calms or easterly winds prevailed in Central and Southern Europe. On the morning of the 6th a marked V-shaped depression crossed Ireland from W. to E. in the periphery of an unusually deep cyclonic system, in the centre of which the barometer fell to 28·12 inches at Seydisfjord on the east coast of Iceland. At the same time atmospheric pressure exceeded 31 inches in Russia. Again on the 11th, a rather deep depression passed across Scotland, causing heavy rain in that country, and strong and squally S.W. winds over the United Kingdom in general. After the last-named date the baric oscillations, while many, were not extreme, but a warm S.W. current passed over the West of Europe between the 24th and the 28th—at Killarney the thermometer rose to 59° on the 25th, and next day 56° was recorded at Geldeston, Norfolk. Except in the north and west of Scotland scarcely any rain fell in this mild period. With the spreading of the Continental anticyclone to England, temperature fell on the 28th in that country, the change to colder weather extending to Ireland and Scotland a day or two later, so that the month closed with a tolerably general frost.

In Dublin the arithmetical mean temperature (41·4°) was below the average (41·7°) by 0·3 of a degree; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41·1°. In the forty-six years ending with 1911, January was coldest in 1881 (M. T. = 33·2°), and warmest in 1898 (M. T. = 47·8°). In 1910 the M. T. was 40·9°.

The mean height of the barometer was 30·292 inches, or 0·418 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·748 inches at 9 a.m. of the 18th, and fell to 29·540 inches at 3.30 p.m. of the 11th. The observed range of atmospheric pressure was, therefore, 1·208 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·1°, or 0·9° above the value for January, 1910. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.* × ·52), the M.T. becomes 41·6°, compared with a thirty-five years' (1871-1905) average of 41·9°. The arithmetical mean of the maximal and minimal readings was 41·4°, compared with a thirty-five years' average of 41·7°. On the 25th the thermometer in the screen rose to 55·4°—wind, S.W.; on the 13th the temperature fell to 28·9°—wind, W.N.W. The minimum on the grass was 26·8° on the 13th.

The rainfall was only ·638 inch, distributed over 10 days. Of this amount ·186 inch fell on the 5th. The average rainfall for January in the thirty-five years, 1871-1905, inclusive, was 2·210 inches, and the average number of rainy days was 18. The rainfall, therefore, and the rain-days were much below the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only ·406 inch was measured on but 9 days. In 1907, only ·428 inch fell on but 9 days. In 1910, 2·993 inches fell on 17 days.

The atmosphere was foggy on the 16th, 19th, 20th, 21st and 31st. High winds were noted on 7 days, but never reached the force of a gale. Snow and hail fell on the 11th. A solar halo was seen on the 10th; a lunar halo on the 7th. Temperature reached or exceeded 50° in the screen on 7 days; while it fell to 32° in the screen on 5 nights, compared with 8 nights in 1910, only one night in 1909, 8 nights in 1908, 4 in 1907, 2 in 1906 and in 1905, 3 in 1904, 7 in 1903 and in 1902, 3 in 1901, but 18 in 1895. The minima on the grass were 32° or less on 13 nights, compared with 14 nights in 1910, 13 in 1909, 15 in 1908, 16 in 1907, 11 in 1906, 9 in 1905, 11 in 1904, 9 in 1903, 12 in 1902, 11 in 1901, and 29 in 1895. On the 13th the maximal temperature in the screen was 36·9°.

At the Normal Climatological Station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 30·290 inches, the range of atmospheric pressure being from 29·563 inches at 9 a.m. of the 6th to 30·744 inches at 9 a.m. of the 18th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·7°. The arithmetical mean of the daily maximal and minimal temperatures was also 41·7°. The screened thermometers rose to 56·2° on the 25th, and fell to 28·6° on the 13th. On the 31st the grass minimum was 17·9°. Rain fell on 7 days to the amount of ·567 inch, the greatest fall in 24 hours being ·170 inch on the 5th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 39·7 hours, of which 5·8 hours occurred on the 31st. The mean daily sunshine was 1·3 hours. The mean temperature of the soil at 9 a.m. was 40·3° at a depth of 1 foot; at a depth of 4 feet it was 43·8°.

Dr. W. Stewart Ross recorded a rainfall of ·74 inch on 11 days at Clonsilla, Greystones, Co. Wicklow, the largest measurement in 24 hours being ·34 inch on the 5th. The thermometer in the screen rose to 57° on the 27th, having fallen to 29° on the 18th. The mean maximum was 45·8°, the mean minimum was 35·3°, and the mean temperature of the whole month was 40·6°.

At Cheeverstown Convalescent Home, Clondalkin, Co. Dublin, Miss C. Violet Kirkpatrick registered 1·05 inches of rain on 10 days. The heaviest fall in 24 hours was ·39 inch on the 5th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 12 days to the amount of ·868 inch, the greatest measurement in 24 hours being ·290 inch on the 5th. The total duration of bright sunshine was 63·6 hours, the largest amount recorded on one day being 7·8 hours on the 31st.

At the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, Dr. J. T Crowe measured ·89 inch of rain on 6 days, the maximum in 24 hours being ·51 inch on the 5th. The mean maximal temperature in the screen was 45·9°, the mean minimum was 38·5°, and the resultant mean temperature was 42·2°. The screened thermometers rose to 56·8° on the 27th and fell to 26·0° on the 20th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was ·76 inch on 8 days. The greatest fall in 24 hours was ·385 inch on the 5th. The mean shade temperature was 37·3°, the extremes being—highest, 53° on the 25th; lowest, 24° on the 12th and again on the 31st.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was ·89 inch on 10 days, the greatest daily measurement being ·28 inch on the 5th. The thermometer in the shade ranged from 29° on the 19th to 54° on the 25th. The mean shade temperature was 41·1°.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson recorded a rainfall of ·80 inch on 11 days, the maximum being ·26 inch on the 5th. The mean temperature of the month was 39·1°, the thermometric range being from 26° on the 19th to 55° on the 26th.

Captain Edward Taylor, D.L., reports a rainfall of 1·07 inches on 12 days at Ardgillan, Balbriggan, Co. Dublin. This measurement was 1·24 inches short of the average, and the rain-days were 6 in defect. The maximal fall in 24 hours was ·53 inch on the 5th. The highest temperature in the shade was 51·1° on the 26th, the lowest was 27·9° on the 13th.

At Druid Lodge, Killiney, Co. Dublin, Mrs. Olive F. Symes measured ·45 inch of rain on only 6 days. The largest fall in 24 hours was ·24 inch on the 5th.

Dr. Christopher Joynt, F.R.C.P.I., recorded ·645 inch of rain on only 9 days at 21 Leeson Park, Dublin. The heaviest fall in 24 hours was ·200 inch on the 5th. In January, 1910, 3·410 inches of rain fell on 19 days at this station.

In Cork, Mr. William Miller measured ·76 inch of rain on 10 days, the greatest rainfall in 24 hours was ·22 inch on the 8th. The rainfall was 3·43 inches in defect of the average for January, and the rain-days were 11 days short of the average.

The Rev. Arthur Wilson, M.A., reports that rain fell on 18 days at the Rectory, Dunmanway, Co. Cork, to the amount of 2·36 inches. The heaviest fall was ·66 inch on the 10th. It was a mild month on the whole, but there were heavy frosts from the 9th to the 13th. The rainfall was 3 inches under the average for the last 6 years.

At Derreen, Kenmare, Co. Kerry, Mr. W. Holbrow measured 2·39 inches of rain on 14 days. The largest measurement on any one day was ·62 inch on the 8th. January was a very fine month at Derreen. Frost occurred on the 2nd, 3rd, 9th and 12th.

FEBRUARY.—As regards weather, February, 1911, was sharply divided into two periods which were directly opposed to each other. In the early part of the month the atmosphere over North-Western Europe was remarkable still, and the weather was cold and misty or foggy. This was due to the persistence of a large anticyclone of unusual intensity and great staying power. In the centre of this system the barometer rose to 30·8 inches on the 1st and 2nd, Castle Bay in Barra Island off the west coast of Scotland reporting 30·85 inches at 6 p.m. of the 1st. A biting frost ushered in the month at the central British and Irish stations in connection with this anticyclone—at Llangammarch Wells, Breconshire, the thermometer fell to 13° in the screen and 6° on the grass on the 1st; and next day, and again on the 11th, Balmoral reported a minimum of 11° in the screen. In Ireland a minimum of 18° in the screen was recorded on the 1st at Markree Castle, Armagh, and Birr Castle. The cold weather lasted more or less until the 13th, but a change to cyclonic conditions had already set in over Iceland on the 9th, and on the 10th a V-shaped secondary depression brought the first rainfall of the month to the Irish stations. At 7 a.m. of the 13th the barometer ranged from 28·60 inches and less in the North of Iceland to 30·50 inches or more in the English Channel. The remainder of the month was stormy, showery, and at times extremely mild for the time of year. A succession of deep atmospheric depressions swept across the Ocean between Iceland and the British Isles, whereas a tongue or ridge of high barometric pressure stretched south-westwards from Central Europe to the Azores. It is worthy of note that very intense cold prevailed in the south-east of Europe during the greater part of the month.

In Dublin the mean temperature (43·3°) was 0·9° above the average (42·4°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·8°. In the forty-seven years ending with 1911, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1903 (M. T. = 47·5°). In 1910 the mean temperature was 42·5°.

The mean height of the barometer was 30·088 inches, or 0·233 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·801 inches at 9 p.m. of the 1st and fell to 28·933 inches at 3 p.m. of the 23rd. The observed range of atmospheric pressure was, therefore, 1·868 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·8°, or 1·7° above the value for January, 1911. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·50, the M. T. is 43·3°, compared with a thirty-five years' (1871-1905) average of 42·4°. On the 21st the thermometer in the screen rose to 59·1°—wind, S.W.; on the 1st it fell to 26·8°—wind, W. to calm. The minimum on the grass was 24·8° on the 1st.

The rainfall was only ·990 inch, distributed, however, over 17 days. The average rainfall for February in the thirty-five years, 1871-1905, inclusive, was 2·010 inches, and the average number of rain-days was 15. The rainfall, therefore, was considerably below the average, whereas the rain-days were 2 in excess. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1910, 3·758 inches fell on 24 days.

Fog occurred on the 1st, 2nd, 3rd, and 8th. The amount of cloud—65·6 per cent.—was about the average—66 per cent. High winds were noted on 14 days, and reached the force of a gale on the 16th, 18th, 21st, and 23rd. Hail fell on the 25th. Solar halos appeared on the 20th, 24th, and 26th.

The temperature reached or exceeded 50° in the screen on 11 days, and fell to 32° on 4 nights. The minima on the grass were 32° or less on 9 nights, compared with every night in 1895. The thermometer failed to rise to 40° in the screen in the daytime on the 1st and 2nd. The highest minimum was 46·6° on the 17th.

In Dublin the rainfall up to February 28th amounted to 1·628 inches on 27 days, compared with a thirty-five years' (1871-1905) average of 4·220 inches on 33 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 30·080 inches. The range of atmospheric pressure was between 30·790 inches at 9 p.m. of the 1st and 29·036 inches at 9 a.m. of the 23rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·6°. The arithmetical mean of the daily maximal and minimal temperatures was 43·8°. The screened thermometers rose to 59·3° on the 21st, and fell to 27·1° on the 1st. On the 1st the grass minimum was 14·6°. Rain fell on 13 days to the amount of ·890 inch, the greatest fall in 24 hours being ·193 inch on the 18th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 52·0 hours, of which 7·5 hours occurred on the 22nd, and 6·6 hours on the 19th. The mean daily duration of bright sunshine was 1·9 hours. The mean earth-temperatures were—at 1 ft., 41·2°; at 4 ft., 43·2°. The one-foot thermometer ranged between 37·2° on the 3rd and 45·3° on the 18th. The four-feet thermometer ranged from 42·2° on the 13th to 44·5° on the 26th and 28th.

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as 1·027 inches on 17 days, 250 inch having been measured on the 18th.

At the Ordnance Survey Office, Phœnix Park, the rainfall was 1·381 inches on 16 days, the maximal measurement in 24 hours being ·270 inch on the 18th. The total amount of sunshine was 80·5 hours, the greatest daily duration being 9·0 hours on the 19th.

At the Cheeverstown Convalescent Home for Little Children of the Poor, Clondalkin, Co. Dublin, Miss C. Violet Kirkpatrick recorded a rainfall of 1·77 inches on 14 days, the largest fall in 24 hours being ·39 inch on the 26th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 17 days to the amount of 1·49 inches, the greatest daily fall being ·42 inch on the 26th. In the 10 years, 1901-1910, the average rainfall in February at Lynton was 2·232 inches on 15 days. The temperature in the shade ranged from 27° on the 1st to 59° on the 21st. The mean temperature in the screen was 43·8°.

Mr. George B. Edmondson recorded a rainfall of 1·14 inches on 18 days at Manor Mill Lodge, Dundrum, Co. Dublin, the largest measurement in 24 hours being ·40 inch on the 26th. The mean temperature of the month was 41·8°, the shaded thermometer rising to 58° on the 18th, 21st and 27th, and falling to 25° on the 1st and 2nd.

Mrs. Olive F. Symes recorded a rainfall of 1·01 inches on 13 days at Druid Lodge, Killiney, Co. Dublin. The maximum in 24 hours was ·34 inch on the 26th. The average rainfall for February at Killiney in the 24 years, 1885-1908, inclusive, was 1·752 inches on 14·2 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·64 inches on 14 days. The greatest fall in 24 hours was ·435 inch on the 26th. The mean shade temperature was 39·7°, the extremes being—highest, 55·5°, on the 21st; lowest, 20·5°, on the 11th.

The rainfall at Ardgillan, Balbriggan, Co. Dublin, measured by Captain Edward Taylor, D.L., was 2·39 inches on 16 days. This amount was ·52 inch in excess of the average, and the rain-days were one in excess. The largest fall in 24 hours was ·54 inch on the 18th. From January 1 to February 28, inclusive, 3·46 inches of rain fell on 28 days—the differences from the averages being −·82 inch and −5 days. The thermometers in the shade rose to 56·2° on the 21st, having fallen to 27·8° on the 1st.

At Clonsilla, Greystones, Co. Wicklow, Dr. W. Stewart Ross measured 1·59 inches of rain on 14 days, the maximum in 24 hours being ·64 inch on the 26th. The mean temperature of the month was 42·9°, the extreme temperatures being 58° on the 19th, and 30° on the 3rd, and again on the 12th.

Dr. John H. Armstrong reports that at Coolagad, Greystones, Co. Wicklow, the rainfall was 1·86 inches on 15 days. The heaviest fall in 24 hours was ·62 inch on the 26th.

At the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, Dr. J. T. Crowe measured 2·28 inches of rain on 14 days, the largest daily measurement being ·67 inch on the 26th. The mean temperature at the Hospital was 42·4°, the extremes being—highest, 56·5° on the 18th; lowest, 28·0° on the 2nd and 3rd. The mean maximum was 47·6°, the mean minimum, 37·2°.

In the City of Cork, Mr. William Miller registered 2·37 inches of rain on 15 days, the largest measurement in 24 hours being ·33 inch on the 26th. The rainfall was ·80 inch below the average, and the rain-days were one in defect. During the first two months of 1911 the rainfall was 3·13 inches on 25 days, or 4·24 inches and 12 days less than the average. The thermometer in the screen rose to 53° on the 25th, and fell to 22° on the 2nd. The mean temperature was 39·7°, or 2·7° below the average for the month in 28 years.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 6·25 inches on 18 days, the greatest fall in 24 hours being ·78 inch on the 26th. The rainfall on the 24th was ·70 inch, and that on the 27th was ·62 inch. No rain fell on the first 8 days. On the last 9 days the fall was 4·21 inches. The rainfall in 1911 to February 28 amounted to 8·61 inches.

Mr. William Holbrow reports that at Derreen, Kenmare, Co. Kerry, 4·98 inches of rain were measured on 17 days. The heaviest fall was ·82 inch on the 14th. Fine to the 10th, the month was stormy from the 13th to the end. Thunder occurred on the 21st. Thirteen degrees of frost were registered on the 1st and 2nd.

MARCH.—A rather cold, dull month—characterised by two distinct types of weather. During the first twelve days it was very changeable and unsettled. Large and deep atmospheric depressions swept eastwards along the Arctic Circle, while their secondaries, assuming a V-shaped form, travelled in the same direction across the British Isles to the Continent. The winds were therefore westerly, varying between S.W. and N.W. as the several depressions came and went. Rain fell frequently, and exceeded the average along the Atlantic seaboard and the coast-line of the English Channel. On the 12th a depression travelled from Cornwall to Belgium, Holland, and Schleswig-Holstein. Strong N. and N.W. winds in its rear carried polar air southwards over the British Islands, and a period of cold weather set in which lasted almost to the end of the month—with one or two brief intervals in England. On the 17th a depression from the Atlantic appeared over the Bay of Biscay, and the wind drew into E. and freshened. In most parts of Ireland the following 10 days were rainless, but showers of hail, sleet and snow were reported from many British stations. During the last week shallow depressions moved north-westwards from the Continent to Ireland, and rain fell frequently and abundantly in the Dublin district—the measurement in the city amounting to ·945 inch on the last 5 days of the month.

In Dublin the arithmetical mean temperature (43·3°) was 0·4° below the average (43·7°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·3°. In the forty-seven years ending with 1911, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1903 (M. T. = 48·1°). In 1910 the M. T. was 44·8°.

The mean height of the barometer was 29·968 inches, or 0·052 inch above the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·400 inches at 9 p.m. of the 25th and fell to 29·559 inches at 4 p.m. of the 10th. The observed range of atmospheric pressure was, therefore, ·841 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·3°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·485) the M. T. becomes 43·2°. The arithmetical mean of the maximal and minimal readings was 43·3°, compared with a thirty-five years' (1871-1905) average of 43·7°. On the 2nd the thermometer in the screen rose to 57·2°—wind, W.; on the 17th the temperature fell to 31·6°—wind, W.N.W. The minimum on the grass was 29·1° on the 17th.

The rainfall was 1·664 inches, distributed over 17 days. The average rainfall for March in the thirty-five years, 1871-1905, inclusive, was 1·910 inches, and the average number of rain-days was 17. The rainfall, therefore, was below, while the rain-days were equal to, the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1910 the rainfall was only ·923 inch on 11 days.

The atmosphere was foggy on the 29th and 31st. High winds were noted on 8 days, reaching the force of a gale on only 2 days—the 18th and 28th. A solar halo appeared on the 5th and 10th, and a lunar halo on the 7th. There was an aurora on the night of the 4th. Hail fell on the 6th, 12th, 13th and 17th. Temperature reached or exceeded 50° in the screen on 7 days, compared with 18 days in 1910, 6 days in 1909, 10 days in 1908, 25 in 1907, 17 in 1906, 20 in 1905, 10 in 1904, 18 in 1903, 23 in 1902, and only 6 in 1901. It fell to 32° in the screen on 3 nights. The minima on the grass were 32° or less on 6 nights, compared with 11 nights in 1910, 14 nights in 1909, 16 in 1908, 9 in 1907, 12 in 1906, 8 in 1905, 13 in 1904, 4 in 1903, 5 in 1902, and 11 in 1901.

The rainfall in Dublin during the three months ending March 31st amounted to 3·292 inches on 44 days, compared with 7·674 inches on 52 days in 1910, 4·550 inches on 41 days in 1909, 6·367 inches on 58 days in 1908, 3·666 inches on 42 days in 1907, 7·291 inches on 59 days in 1906, and a thirty-five years' (1871-1905 inclusive) average of 6·130 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean height of the barometer was 29·963 inches, the highest reading observed being 30·412 inches at 9 p.m. of the 25th, the lowest, 29·626 inches at 9 p.m. of the 12th. The mean temperature was 43·4°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 42·7°. The screened thermometers rose to 57·5° on the 2nd, and fell to 32·0° on the 14th. The grass minimum was 23·3° on the 17th. The mean daily maximum was 48·3°, and the mean daily minimum, 38·5°. Rain fell on 11 days to the amount of 1·302 inches, ·230 inch being measured on the 31st. There were 8·3 hours of bright sunshine on the 9th. The mean temperature of the soil at 9 a.m. at a depth of one foot was 43·1°; at a depth of 4 feet it was 44·6°.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, at 1·705 inches on 14 days, ·330 inch being measured on the 28th.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, at 1·41 inches on 14 days. The greatest rainfall in 24 hours was ·365 inch on the 31st. The extremes of temperature in the shade were—highest, 57°, on the 2nd; lowest, 27°, on the 6th. The mean temperature was 39·6°.

Captain Edward Taylor, D.L., returns the rainfall at Ardgillan, Balbriggan, Co. Dublin, at 1·78 inches on 16 days. The amount was ·25 inch below the average, and the rain-days were one in defect. Up to March 31st, the rainfall at Ardgillan amounted to 5·24 inches, or 1·06 inches short of the average, and the rain-days were 44, or 6 below the average number for the first quarter of the year. The thermometers in the screen rose to 57·7° on the 2nd and fell to 29·1° on the 7th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 18 days to the amount of 1·74 inches, compared with an average of 2·64 inches on 20 days in the 10 years ended with 1910. The greatest daily rainfall was ·25 inch on the 30th. The temperature in the shade ranged from 56° on the 2nd to 31° on the 17th. The mean shade temperature was 42·2° compared with a ten years' (1901-1910) average of 43·7°. There were hail showers on the 13th and 17th.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson recorded a rainfall of 1·60 inches on 19 days, the maximum in 24 hours being ·30 inch on the 31st. The mean temperature of the month was 42·0°, the extremes being—highest, 53° on the 8th; lowest, 31° on the 7th and 17th.

Miss C. Violet Kirkpatrick measured 1·29 inches of rain on 20 days at Cheeverstown Convalescent Home for Little Children, Clondalkin, Co. Dublin. The largest amount for 24 hours was ·27 inch on the 3rd.

Mrs. Olive F. Symes reports a rainfall of 1·30 inches on 16 days at Druid Lodge, Killiney, the greatest measurement in 24 hours being ·23 inch on the 28th. At Killiney the average rainfall for March in the 24 years, 1885-1908, inclusive, was 1·948 inches on 17 days. Since January 1, 1911, the rainfall at Druid Lodge has been 2·76 inches on 35 days.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 19 days to the total amount of 1·678 inches, the largest measurement being ·270 inch on the 3rd. The duration of bright sunshine was 109·3 hours, of which 10·0 hours occurred on the 27th.

Dr. J. H. Armstrong reports that at Coolagad, Greystones, Co. Wicklow, 1·39 inches of rain fell on 18 days. The maximal fall in 24 hours was ·23 inch on the 28th.

At Clonsilla, Greystones, Co. Wicklow, Dr. W. Stewart Ross recorded a rainfall of 1·32 inches on 15 days, the maximum in 24 hours being ·18 inch on the 28th. The mean temperature of the month was 42·8°, the mean maximum being 46·8°, and the mean minimum 38·7°. The thermometer rose to 62° on the 4th and fell to 34° on the 13th, 14th, and 15th.

Dr. J. T. Crowe, Resident Medical Officer, reports that the rainfall at the Royal National Hospital for Ireland for Consumption, Newcastle, Co. Wicklow, was 1·51 inches on 22 days, the maximal fall in 24 hours being ·19 inch on the 10th and 28th. The mean air temperature was 42·1°—the extremes being—highest, 56·2° on the 2nd; lowest, 32·0° on the 14th. The mean maximum was 47·4°, the mean minimum, 36·8°.

Mr. W. Miller registered 2·81 inches of rain at Cork on 21 days. The greatest fall in 24 hours was ·65 inch on the 18th. The rainfall was 0·14 inch more than the average for March. The rainfall of the first quarter of 1911 was 5·94 inches, or 4·10 inches less than the average. The rain-days in the quarter numbered 46, being 6 under the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 5·31 inches of rain fell there on 21 days, ·84 inch being measured on the 18th. There was a slight fall of snow on the morning of the 9th. The rainfall of the first quarter of 1911 at Dunmanway equals 13·92 inches—an amount which is 1·33 inches under the average (15·25 inches) for the last 6 years. Frost occurred on 9 days.

At Derreen, Kenmare, Co. Kerry, Mr. William Holbrow measured 4·42 inches on the 16th, the greatest fall in 24 hours being ·88 inch on the 9th. There were gales on the 17th, 18th, and 19th. Frost occurred on the 26th, 27th, and 29th.

APRIL.—April, 1911, was remarkable for its wintry beginning and genial close. From the 1st to the 14th an anticyclone lay off the N.W. or W. coasts of the British Isles, whereas the barometer was low over the Iberian Peninsula and in the Mediterranean Basin, as well as in the Baltic. This distribution of atmospheric pressure caused cold winds of considerable strength from N., N.E., and E. to pass over North-western Europe. Squalls of snow and hail were frequent in many parts of Great Britain and the east of Ireland during the first week, and sharp night frosts occurred in the centre of Ireland, the successive minima at Birr Castle from the 2nd being 30°, 23°, 25°, 25°, 28°, 29° and 33°. On the mornings of the 12th and 13th also a minimum of 27° was reported from that station. At Kew Observatory the maximum on the 5th was 34°, and at Worthing the thermometer on that day did not rise above 32°. In Dublin the same day was signalised by squalls from N.E. and frequent showers of snow, hail and graupel. With the passing southward of the high pressure system on the 14th and the simultaneous appearance of a large area of low pressure in the Icelandic region, westerly and south-westerly winds began to pass over the British Isles, and the remainder of the month was mild, showery and squally in Ireland. In the London district no rain fell from the 11th to the 25th; on the other hand, in the week ended the 22nd, the rainfall in Dublin reached ·972 inch on 5 days. Owing to the genial warmth of the latter half of the month its mean temperature was slightly above average, and this notwithstanding the fact that in Dublin the mean temperature of the first week (2nd-8th) was no higher than 40·9°. Like April, 1910, this may be described as a planet month. Jupiter was a conspicuous object in the south-eastern sky in the early hours of night, while Venus was resplendent as an evening star in the west; and, lastly, Mercury was visible in the north-western sky on several successive evenings in the middle of the month.

In Dublin the arithmetical mean temperature (48·0°) was 0·4° above the average (47·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 47·0°. In the forty-seven years ending with 1911, April was coldest in 1879 (the cold year) (M. T. = 44·5°), and warmest in 1893 (M. T. = 51·4°). In 1910 the M. T. was 45·9°.

The mean height of the barometer was 29·981 inches, or 0·131 inch above the average value for April—namely, 29·850 inches. The mercury rose to 30·503 inches at 9 a.m. of the 9th, and fell to 28·800 inches about 4.30 a.m. of the 19th. The observed range of atmospheric pressure was, therefore, 1·703 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47·0°, or 4·7° above the value for March, 1911. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·476), the value is 47·7°, or 0·4° above the average mean temperature for April, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (47·3°). The arithmetical mean of the maximal and minimal readings was 48·0°, compared with a thirty-five years' (1871-1905, inclusive) average of 47·6°. On the 22nd the thermometer in the screen rose to 63·5°—wind, S.W.; on the 4th the temperature fell to 31·8°—wind, W. The minimum on the grass was 29·0° on the 4th.

The rainfall was 1·408 inches, distributed over 15 days. The average rainfall for April in the thirty-five years, 1871-1905, inclusive, was 1·940 inches, and the average number of rainy days was 16. The rainfall, therefore, and also the rain-days were below the average. In 1877 the rainfall in April was very large—4·707 inches on 21 days. On the other hand, in 1873, only ·498 inch was measured on 8 days. In 1910, 2·197 inches fell on 19 days.

High winds were noted on 14 days, and reached the force of a gale on the 18th and 19th. Hail fell on the 4th, 5th, and 20th; snow on the 4th and 5th. The temperature rose above 60° in the screen on 5 days. It failed to reach 50° on 8 days. It once fell to 32° in the screen, and on 3 nights it fell to or below 32° on the grass. The mean lowest temperature on the grass was 40·2°, compared with 36·0° in 1910, 39·0° in 1909, 35·4° in 1908, 36·7° in 1907, 33·6° in 1906, 37·3° in 1905, 39·1° in 1904, 37·0° in 1903, 36·8° in 1902, 37·3° in 1901, and only 31·6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 4·700 inches on 59 days, compared with an average of 8·338 inches on 69 days in the first decade of the twentieth century, and a thirty-five years' (1871-1905) average of 8·070 inches on 66 days.

Mr. C. D. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·985 inches, the range of atmospheric pressure being from 30·511 inches at 9 a.m. of the 9th to 28·866 inches at 9 a.m. of the 19th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47·2°. The arithmetical mean of

the daily maximal and minimal temperatures was 47·8°. The screened thermometers rose to 63·9° on the 22nd and fell to 33·2° (?) on the 4th. On the 8th the grass minimum was 25·5°. Rain fell on 14 days to the amount of 1·828 inches, the greatest fall in 24 hours being ·750 inch on the 18th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 139·3 hours, of which 10·9 hours occurred on the 26th and 10·3 hours on the 13th. The mean daily sunshine was 4·6 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 46·8°; at a depth of 4 feet it was 46·0°.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 1·470 inches on 14 days, the largest amount recorded in 24 hours being ·880 inch on the 18th.

Mr. T. Bateman, of The Green, Malahide, Co. Dublin, returns the rainfall at 1·395 inches on 14 days. The greatest fall in 24 hours was ·34 inch on the 18th. The mean shade temperature was 45·3°, the extremes being—highest, 63° on the 22nd; lowest, 29° on the 11th.

Captain Edward Taylor, D.L., gives the rainfall at Ardgillan, Balbriggan, Co. Dublin, as 1·53 inches on 15 days, the rainfall being 0·48 inch below and the rain-days 1 below the average. The heaviest fall in 24 hours was ·40 inch on the 26th. The rainfall from January 1st equals 6·77 inches on 59 days—that is, 1·54 inches and 7 days short of the average. The thermometers in the screen rose to 61·7° on the 21st, having fallen to 33·1° on the 12th.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 2·19 inches on 16 days. The greatest daily rainfall was 1·13 inches on the 18th. The mean shade temperature was 47·8°, compared with a ten years' (1901-1910) average of 46·6°. The thermometric range was from 32° on the 4th to 63° on the 22nd. Hail showers fell on the 5th and 20th. Snow on the 5th.

Mr. George B. Edmondson recorded a rainfall of 1·92 inches on 16 days at Manor Mill Lodge, Dundrum, Co. Dublin. The greatest fall in 24 hours was 1·17 inches on the 18th. The thermometer in the screen ranged between 65° on the 16th and 32° on the 4th. The mean temperature of the month was 48·0°.

At Cheeverstown Convalescent Home for Little Children, Clondalkin, Co. Dublin, Miss C. Violet Kirkpatrick recorded 2·02 inches of rain on 18 days. The largest fall in 24 hours was ·41 on the 18th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 19 days to the amount of 1·268 inches, the greatest measurement in 24 hours being ·275 inches on the 25th. The total amount of bright sunshine was 160·0 hours, of which 12·4 hours fell on the 13th, the brightest day of the month. The mean maximum temperature was 53·2°, the mean minimum was 39·0°, and the mean temperature of the month was 46·1°.

Dr. John H. Armstrong reports that at Coolagad, Greystones, Co. Wicklow, the rainfall amounted to 2·05 inches on 14 days. The heaviest fall in 24 hours was 1·02 inches on the 18th. The total rainfall in 1911, up to April 30th, was 6·07 inches on 56 days.

Dr. W. S. Ross recorded 1·45 inches of rain on 13 days at Clonsilla, Greystones, the largest measurement in 24 hours being ·69 inch on the 18th. The thermometer rose to 63° on the 22nd, having fallen to 34° on the 6th.

At Druid Lodge, Killiney, Co. Dublin, Mrs. Olive F. Symes states that 1·34 inches of rain fell on 10 days. The maximal fall in 24 hours was ·92 inch on the 18th.

Dr. John T. Crowe, Resident Medical Officer at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, reports that the rainfall at that place was 1·86 inches on 14 days, the maximal fall in 24 hours being ·67 inch on the 18th. The mean temperature of the air was 46·4°, the thermometer in the screen having risen to 64·0° on the 24th and fallen to 32·8° on the 5th. The mean maximal temperature was 52·3°, the mean minimum being 40·5°. There was a slight fall of snow on the 4th.

In Cork, according to Mr. W. Miller, the rainfall amounted to 2·13 inches on 14 days, ·40 inch being measured on the 26th. Since January 1, 1911, 8·07 inches of rain have fallen in Cork on 60 days. The rainfall of the four months was 4·60 inches in defect and the rain-days were 7 below the average. The mean temperature was 44·5°, or 3·3° below the average of 28 years.

At the Rectory, Dunmanway, Co. Cork, the Rev. Arthur Wilson, M.A., measured 5·03 inches of rain on 15 days. The heaviest falls in 24 hours were ·87 inch on the 20th, ·70 inch on the 24th, and ·64 inch on the 26th. Only ·13 inch fell on 3 days up to the 17th, the dry weather accompanying cold E. and N.E. winds. Severe frost occurred on the night of the 11th. The rainfall at Dunmanway in the four months ended April 30 amounted to 18·95 inches on 72 days.

Mr. W. Holbrow reports that the rainfall at Derreen, Kenmare, Co. Kerry, amounted to 6·54 inches on 13 days, the largest measurement being 1·63 inches on the 17th. The weather was very fine at Derreen from the 1st to the 17th, but rather cold, with sharp frosts on the 4th, 7th, 8th, 10th, 11th, and 12th. There was a sea-fog on the 2nd.

MAY.—Opening with a broken spell of fresh to squally south-westerly winds, showers, and low temperatures, this month proved one of the finest, warmest and brightest Mays of the past half-century. In the week ended Saturday, the 27th, the sunshine record was 61·3 hours at the Ordnance Survey Office, Phœnix Park, 59·7 hours at Trinity College, and 59·0 hours at the Royal Botanic Gardens, Glasnevin. Only in 1868 and in 1893 was the mean temperature (55·3°) exceeded—in 1868, it was 55·8°, in 1893, 56·3°. In 1908 it was 55·2°. Large and deep cyclonic depressions were centred in the Icelandic region both at the beginning of the month and from the 22nd to the 25th, but only their fringe and the secondaries attached thereto affected the British Islands. At Reikjavik, the Capital of Iceland, the barometer stood as low as 28·61 inches at 7 a.m. (G. M. T.) of the 23rd. But, speaking generally, the distribution of atmospheric pressure was chiefly anticyclonic in the British Isles—hence the dry, warm weather of the latter half of the month. In Dublin two-thirds of the rainfall for the whole month occurred on the 3rd and 13th. On the former occasion the wind veered from S.W. to W. at 11 a.m., with strong squalls and torrents of rain mingled with hail. On the night of the 13th a severe thunderstorm burst over Dublin, accompanied by a downpour of rain. From the 15th onwards only ·003 inch of rain fell in this city. Violent thunderstorms occurred in England about the 25th, and on the 30th and 31st. Polar winds and sharp cold had been experienced in that country from the 18th to the 21st inclusive, and a period of summer heat followed hard upon the chilly spell. These changes apparently upset the electric equilibrium of the atmosphere. In the violent thunderstorm of the 31st, the rainfall at Epsom was 2·86 inches, of which 2·44 inches fell between 5.20 p.m. and 6.10 p.m. In the same storm 1 inch was measured at Greenwich Observatory.

In Dublin the arithmetical mean temperature (55·3°) was 3·1° above the average (52·2°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 54·8°. In the forty-seven years ending with 1911, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1910 the M. T. was 51·9°.

The mean height of the barometer was 29·972 inches, or 0·017 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·307 inches at 9 a.m. of the 28th, and fell to 29·330 inches at 9 a.m. of the 3rd. The observed range of atmospheric pressure was, therefore, 0·977 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54·8°, or 7·8° above the value for April, 1911—47·0°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·47), the value is 54·9°, or 3·1° above the average mean temperature for May, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (51·8°). The arithmetical mean of the maximal and minimal readings was 55·3°, compared with a thirty-five years' average of 52·2°. On the 24th the thermometer in the screen rose to 69·8°—wind, S.; on the 4th the temperature fell to 41·1°—wind, W. The minimum on the grass was 38·8° on the 21st.

The rainfall amounted to 1·286 inches, distributed over 10 days. The average rainfall for May in the thirty-five years, 1871-1905, inclusive, was 1·970 inches, and the average number of rain-days was 15. The rainfall and rain-days were, therefore, considerably below the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days. In 1910, 2·550 inches fell on 21 days.

A solar halo appeared on the 11th. High winds were noted on 3 days, and attained the force of a gale on the 3rd. Hail fell on the 2nd, 3rd and 13th. A brief thunderstorm occurred on the 11th, and a severe thunderstorm on the night of the 13th. There were fogs on the 8th and 15th.

The mean minimal temperature on the grass was 46·2°, compared with 42·0° in 1910, 41·9° in 1909, 45·2° in 1908, 41·6° in 1907, 41·9° in 1906, 42·5° in 1905, 42·6° in 1904, 44·3° in 1903, 40·3° in 1902, 41·7° in 1901, and 37·6° in 1894. The maximum never fell short of 50°. The absolute maximum was 69·8° on the 24th.

The rainfall in Dublin during the five months ended May 31st amounted to 5·986 inches on 69 days, compared with 12·421 inches on 92 days in 1910, 10·098 inches on 75 days in 1909, 10·078 inches on 95 days in 1908, 9·499 inches on 81 days in 1907, 11·592 inches on 97 days in 1906, 9·026 inches on 81 days in 1905, 11·741 inches on 92 days in 1904, 12·560 inches on 95 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, 5·971 inches on 70 days in 1896, and a thirty-five years' average of 10·040 inches on 81 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, returns the mean height of the barometer as 29·966 inches, the highest reading observed being 30·291 inches at 9 a.m. of the 20th, the lowest, 29·334 inches at 9 a.m. of the 3rd. The arithmetical mean temperature was 54·5°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 54·8°. Rain fell on 8 days to the amount of 1·043 inches, ·386 inch being measured on the 13th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 214·0, giving a daily average of 6·9 hours. The corresponding figures for May, 1904, were 192·5 hours and 6·2 hours; for 1905, 215·7 hours and 7·0 hours; for 1906, 132·5 hours and 4·3 hours; for 1907, 173·0 hours and 5·6 hours; for 1908, 193·9 hours and 6·3 hours; for 1909, 231·5 hours and 7·5 hours; and for 1910, 175·5 and 5·7 hours, respectively. The mean earth-temperature at 9 a.m. was 54·6° at a depth of one foot below the surface, 51·0° at 4 feet. The corresponding values for 1910 were 54·7° and 49·3°, and for 1909, 52·3° and 50·0°. The lowest temperature on the grass (terrestrial radiation) was 29·3° on the 21st. The highest temperature in the shade was 70·0° on the 24th; the lowest was 40·7° on the 21st.

Captain Edward Taylor, D.L., returns the rainfall at Ardgillan, Balbriggan, Co. Dublin, as having been 1·11 inches on 11 days; the largest fall in one day was ·30 inch on the 3rd. The rainfall was ·86 inch below the average, the rain-days were 3 in defect. Since January 1, 7·88 inches of rain have fallen at that station on 70 days, this measurement being 2·40 inches below the average and the rain-days being 9 in defect. The shade temperature ranged from 37·7° on the 4th to 64·9° on the 22nd, 23rd, and 30th. The mean temperature was 52·4°, or 2·3° above the average.

At Coolagad, Greystones, Co. Wicklow, the rainfall measured by Dr. J. H. Armstrong was ·94 inch on 8 days, ·29 inch falling on the 1st, and again on the 3rd. The total fall since January 1st, 1911, equals 7·01 inches on 64 days.

Dr. W. Stewart Ross measured ·86 inch of rain on 8 days at Clonsilla, Greystones, Co. Wicklow. The heaviest fall in 24 hours was ·29 inch on the 3rd. The mean temperature was 53·5°—highest being 73° on the 25th, lowest 40° on the 3rd. The mean maximum was 60·2°, the mean minimum was 46·8°.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 1·42 inches on 12 days. The greatest daily measurement was ·50 inch on the 13th, when a thunderstorm occurred. The temperature in the shade ranged from 40° on the 21st to 72° on the 24th. The mean temperature of the month was 55·6°, compared with 52·4° in 1910, 53·6° in 1909, 56·2° in 1908, 51·1° in 1907, 51·8° in 1906, 54·5° in 1905, 53·3° in 1904, 53·1° in 1903, 50·5° in 1902, and 52·6° in 1901.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson measured 1·29 inches of rain on 11 days, the greatest fall in 24 hours being ·48 inch on the 13th. The mean temperature was 57·0°, the extremes being—highest, 78° on the 31st; lowest, 40·0° on the 21st.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 11 days to the amount of 1·179 inches, the largest measurement in 24 hours being ·425 inch on the 3rd. The total amount of sunshine was 235·3 hours, the most in one day being 14·2 hours on the 27th, and again on the 29th.

Mrs. Olive F. Symes reports that the rainfall at Druid Lodge, Killiney, Co. Dublin, was ·49 inch on 7 days, ·17 inch being measured on the 13th. The average rainfall in May at Killiney in the 24 years, 1885-1908, inclusive, was 2·136 inches on 13·8 days.

At Cheeverstown Convalescent Home for Little Children of the Poor, Clondalkin, Co. Dublin, Miss C. Violet Kirkpatrick recorded a rainfall of 1·70 inches on 10 days, the maximal falls in 24 hours being ·51 inch on the 15th and ·49 inch on the 3rd.

Dr. John T. Crowe reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 1·23 inches on 7 days, the greatest fall in 24 hours being ·43 inch on the 2nd. The screened thermometers ranged from 39·0° on the 21st to 67·0° on the 29th. The mean temperature at 9 a.m. and 9 p.m. was 52·7°.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, at 1·505 inches on 9 days, ·680 inch being measured on the 13th and ·375 inch on the 3rd.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, at 1·025 inches on 10 days. The greatest rainfall in 24 hours was ·195 inch on the 1st. The extremes of temperature in the shade were—highest, 68·5° on the 24th; lowest, 38·0° on the 20th. The mean temperature was 52·8°.

Mr. W. Miller registered 1·82 inches of rain at Cork on 11 days. The greatest fall in 24 hours was ·63 inch on the 1st. The rainfall was 0·46 inch in defect of the average for May. The rainfall of the first five months of 1911 was 9·89 inches on 71 days, or 5·06 inches less than the average. The rain-days also were 10 below the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 5·34 inches of rain fell there on 14 days, 1·15 inches being measured on the 1st and 1·10 inches on the 2nd. Other heavy falls were ·81 inch on the 13th and ·74 inch on the 14th, chiefly in thunderstorms. At Dunmanway May was a warm month with very heavy rain on some days and nights, and a succession of thunderstorms for 5 days from midnight on the 10th to 5 p.m. on Sunday, the 14th. Each afternoon for 4 days there were thunder and lightning. On Saturday, the 13th, ·75 inch of rain fell in 40 minutes, and on Sunday, the 14th, ·70 inch in the same time. On the evening of Friday the 12th the lightning struck a field at Kilronan and left a mark like a huge asterisk. On Sunday, the 14th, there was a curious cloud, in shape like a long finger, pointing to the earth just before the thunder.

The rainfall recorded at Derreen, Kenmare, Co. Kerry, by Mr. W. Holbrow, amounted to 4·66 inches on 17 days. The heaviest fall in 24 hours was 1·33 inches on the 1st. The weather at Derreen was stormy from the 1st to the 4th. Thunder occurred on the 10th, 11th and 12th. It was very fine from the 25th to the end of the month.

JUNE.—June, 1911, may be described as a favourable month from all points of view. An absolute drought, which commenced in Dublin on May 15th, lasted until 1.35 a.m. of the 16th June—that is to say, for a full 30 days. At the hour named rain began to fall in steady showers, the break in the weather having been heralded by the overspreading of the sky by a sheet of cirrus cloud in which a solar halo appeared at 1 p.m. of the 15th. The second half of the month was cloudy, windy and

showery, rain falling in measurable quantities on 11 out of the last 16 days. Slight thunderstorms occurred on the 17th and 23rd, and thunder was heard on the 18th as well as on the 1st, when, however, the weather remained dry in Dublin. During the first fortnight an anticyclone lay off the N.W. coasts of the British Isles, so that N.E. winds prevailed. The amount of bright sunshine was very large in the same period, the sky being practically cloudless on the 7th and 8th.

The unsettled weather was ushered in by the gradual approach of a low pressure system from the Azores to the S.W. of Ireland. This passed northwards along the west coast of this country and remained fixed on the Atlantic between Scotland and Iceland for many days. On the 24th torrents of rain fell along the east and south-east coasts of Great Britain in connection with a depression of some depth. At North Shields 2·57 inches of rain were measured on the morning of Sunday, the 25th.

In Dublin the arithmetical mean temperature (58·4°) was above the average (57·9°) by 0·5°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 57·9°. In the forty-seven years ending with 1911, June was coldest in 1909 (M. T. = 54·8°), 1907 (M. T. = 55·4°), 1882 (M. T. = 55·8°), and 1879 (" the cold year ") (M. T. = 55·9°). It was warmest in 1887 (M. T. = 62·3°), 1896 (M. T. = 61·4°), and 1899 (M. T. = 61·3°). June, 1909, established a record for coldness. In 1910, the M. T. was 57·6°.

The mean height of the barometer was 29·978 inches, or 0·061 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·552 inches at 9 a.m. of the 6th, and fell to 29·411 inches at 9 a.m. of the 18th. The observed range of atmospheric pressure was, therefore, 1·141 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 57·9°, or 3·1° above the corresponding M. T. for May, 1911. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·465), the value was 57·9°, or 0·5° above the average mean temperature for June, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (57·4°). The arithmetical mean of the maximal and minimal readings was 58·4°, compared with a thirty-five years' average of 57·9°. On the 2nd the thermometer in the screen rose to 72·9°—wind, E.N.E.; on the 15th the temperature fell to 43·0°—wind, E.N.E. The minimum on the grass was 40·2° on the 15th.

The rainfall amounted to 1·743 inches on 11 days. The average rainfall for June in the thirty-five years, 1871-1905, inclusive, was 1·990 inches, and the average number of rain-days was 15. The rainfall, therefore, and the rain-days were below the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also, 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days. In 1887 the rainfall was only ·252 inch, distributed over 5 days. In 1909, 1·651 inches fell on 12 days. June, 1910, established an undisputed record for excessive rainfall in Dublin—the measurement being 6·211 inches on 19 days.

High winds were noted on 7 days. A solar halo was seen on the 15th. Thunderstorms occurred on the 17th and 23rd, and thunder was heard on the 1st and 18th.

The rainfall in Dublin during the six months ending June 30th amounted to 7·729 inches on 80 days, compared with 18·632 inches on 111 days in 1910; 12·061 inches on 84 days in 1909, 11·729 inches on 107 days in 1908, 12·336 inches on 108 days in 1907, 12·641 inches on 109 days in 1906, 10·201 inches on 92 days in 1905, 12·817 inches on 102 days in 1904, 15·054 inches on 108 days in 1903, 12·344 inches on 98 days in 1902, 9·352 inches on 80 days in 1901, only 6·741 inches on 67 days in 1887, and a thirty-five years' average of 12·030 inches on 96 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean height of the barometer was 29·974 inches, the highest reading observed being 30·545 inches at 9 a.m. of the 6th, the lowest, 29·390 inches at 9 a.m. of the 18th. The arithmetical mean temperature was 57·6°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 58·2°. The thermometer rose to 71·7° in the shade on the 5th, and fell to 41·9° on the 15th. The grass minimum was 31·6° on the 15th. Rain fell on 9 days to the amount of 1·534 inches, ·336 inch being measured on the 16th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 190·9, giving a daily average of 6·4 hours. The corresponding figures for 1905 were 217·6 hours and 7·3 hours, 1906, 210·3 hours and 7·0 hours, 1907, 129·4 hours and 4·3 hours, 1908, 181·4 hours and 6 hours, 1909, 158·7 hours and 5·3 hours, and 1910, 139·9 hours and 4·7 hours. The mean earth temperature read at 9 a.m. was 60·1° at a depth of 1 foot below the surface of the ground, 56·2° at a depth of 4 feet.

At Ardgillan, Balbriggan, Co. Dublin, Captain Edward Taylor, D.L., measured 3·09 inches of rain on 11 days, the heaviest fall in 24 hours being 1·63 inches on the 17th. The rainfall was 0·88 inch above the average, while the rain-days were 2 in defect. Temperature in the screen rose to 69·1° on the 27th, having fallen to 39·2° on the 14th. Since January 1, 1911, the rainfall at Ardgillan amounts to 10·97 inches, or 1·29 inches below the average, and the rain-days number 81, or 11 in defect. On the 17th a thunderstorm, accompanied by heavy rain and hail, prevailed from 12.25 p.m. to 2.10 p.m.; the hailstones were a quarter of an inch in diameter. Later in the day, heavy showers fell between 3.30 p.m. and 5.45 p.m. At 6 p.m. the weather cleared. The rainfall to that hour was 1·58 inches. At a station near Skerries, only 1¼ mile distant towards the south, only ·67 inch was recorded as the rainfall for the 17th, showing how very local thunderstorm-rains are.

At Cheeverstown, Clondalkin, Co. Dublin, Miss Violet C. Kirkpatrick recorded 1·60 inches of rain on 11 days. The greatest fall in 24 hours at Cheeverstown was ·38 inch on the 18th.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 1·58 inches on 10 days, compared with 6·97 inches on 21 days in 1910. The greatest daily fall was ·49 inch on the 16th. The mean shade temperature was 60·2°. The thermometric range was from 76° on the 4th to 42° on the 15th.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson registered a rainfall of 1·45 inches on 10 days. The greatest fall in 24 hours was ·46 inch on the 16th. The mean temperature of the month was 59·3°, the extremes being—highest, 79° on the 2nd; lowest, 42° on the 16th. The half-year's rainfall was 8·20 inches on 85 days.

Mrs. Olive F. Symes supplies the following record of the rainfall at Druid Lodge, Killiney:—Rain fell on 11 days to the amount of 1·66 inches, the maximal fall in 24 hours being ·94 inch on the 16th. The average rainfall for June at Cloneevin, Killiney, in the 24 years, 1885-1908, was 1·771 inches on 13·2 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, was 1·695 inches on 8 days. The heaviest fall in 24 hours was ·545 inch on the 17th. The mean shade temperature was 56·6°, the extremes being—highest, 71° on the 5th; lowest, 40° on the 13th.

Dr. C. Joynt returns the rainfall at 21 Leeson Park, Dublin, as 1·820 inches on 11 days, ·450 inch having been recorded on the 16th, and ·440 inch on the 23rd. The half-year's fall was 8·172 inches.

Dr. J. H. Armstrong reports that at Coolagad, Greystones, Co. Wicklow, the rainfall was 2·23 inches on 10 days. The heaviest rainfall in 24 hours was 1·21 inches on the 16th. The Welsh coast was clearly visible at 5.45 p.m. of the 28th.

At Clonsilla, Greystones, Co. Wicklow, Dr. W. Stewart Ross measured 1·86 inches of rain on 10 days—·90 inch being recorded on the 16th. The mean temperature was 57·3°, the extremes being—highest, 73°, on the 4th; lowest, 39°, on the 15th. The mean maximal temperature was 65·5°; the mean minimal temperature was 49·1°.

Dr. J. T. Crowe reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, rain fell on 10 days to the amount of 2·19 inches, the maximal fall in 24 hours being 1·01 inches on the 16th. The mean temperature for the month was 56·3°, the extremes being—highest, 70° on the 2nd and 3rd; lowest, 37° on the 15th. The mean maximum temperature was 63·6°; the mean minimum temperature was 48·9°.

The Rev. Arthur Wilson, M.A., reports a rainfall of 2·21 inches on 13 days at the Rectory, Dunmanway, Co. Cork. On the 15th ·84 inch was measured. The first two weeks were very fine and warm. Thunder and lightning occurred on the night of the 2nd. The rainfall for the completed six months of 1911 amounts to 26·50 inches on 99 days, the averages being 26·30 inches and 116 days.

Mr. W. Miller returns the rainfall at Cork at 2·94 inches on 11 days—this amount exceeding the average for June by ·54 inch. The greatest rainfall in 24 hours was 1·42 inches on the 18th. Thunder and lightning occurred on that day. Thunder was also heard on the 3rd and 16th. The rainfall of the first six months of 1911 in Cork was 12·83 inches on 82 days, or 4·52 inches and 9 days short of the average.

At Derreen, Kenmare, Co. Kerry, Mr. W. Holbrow recorded a rainfall of 3·72 inches on 12 days, the heaviest fall in 24 hours being ·80 inch on the 15th. Drought prevailed from the 6th to the 15th. The latter end of the month was showery, with very cold nights. Up to June 30, the rainfall at Derreen amounted to 26·81 inches.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell in June on 12 days to the total amount of 1·541 inches, ·370 inch being registered on the 23rd. The duration of bright sunshine was 194·2 hours, the most in one day being 14·3 hours on the 7th.

JULY.—An extremely warm, summerlike month—a month of paradoxes, characterised by drought and yet with a rainfall in excess of the average and distributed over as many as 14 days. Up to the 19th, the rainfall was only ·031 inch on 4 rain-days. Of the last 13 days 10 yielded a measurable rainfall. At the station in Fitzwilliam Square during the week ended Saturday the 29th rain fell on 5 days to the large amount of 2·291 inches. This large quantity included the product of a violent thunderstorm in the late afternoon of the 29th, when 1·212 inches of rain fell in 45 minutes. The forenoon was cloudy and hazy with some slight showers. The afternoon was warm and bright until after 4 p.m., when a sheet of electrical cirrus overspread the sky from S.S.E. The aspect of the clouds became more and more threatening. At 5.50 p.m. thunder was first heard towards the south. At 6.8 p.m. lightning was first seen. A violent thunderstorm then burst over the city. The thunder became almost continuous, and lightning flashed incessantly. Soon rain descended in torrents, 1·212 inches falling in some 45 minutes ended at 6.55 p.m., at which hour the storm passed away to the northward. The wind shifted to W. in the middle of the storm. The barograph showed a sudden dip or fall, followed by an equally sudden rise of pressure. The following rainfall measurements in the thunderstorm have come to hand:—Clonsilla, Greystones, ·30 inch; Coolagad, Greystones, ·44 inch (·37 inch in 40 minutes); Fassaroe, near Enniskerry, Co. Wicklow, ·56 inch in 35 minutes—

a brief hailstorm before the rain yielded curiously shaped angular hailstones, with a whitish centre and an ice-envelope; Druid Lodge, Killiney, ·97 inch; Dundrum, 1·111 inches at Manor Mill Lodge, 1·150 inches at Lynton; Trinity College, Dublin, 1·390 inches; the Royal Botanic Gardens, Glasnevin, 1·16 inches; the Ordnance Survey Office, Phœnix Park, 1·120 inches.

The first three days of the month were quite cool, the thermometer falling to 41° at Birr Castle on the 2nd, and to 36° or 37° at some central Scottish stations on the 3rd. But a change soon came and torrid heat was experienced, especially in England—on the 22nd the thermometer rose to 96° at Greenwich.

In Dublin the arithmetical mean temperature (63·5°) was 3·0° abovethe average for the 35 years, 1871-1905 (60·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 62·2°. In the forty-seven years ending with 1911, July was coldest in 1879 ("the cold year") (M. T. = 57·2°). It was warmest in 1905 (M. T. = 63·8°); and in 1887 (M. T. = 63·7°). In 1910 the M. T. was 58·5°.

The mean height of the barometer was 30·130 inches, or 0·215 inch above the corrected average value for July—namely, 29·915 inches. The mercury rose to 30·575 inches at 9 a.m. of the 11th, and fell to 29·668 inches at 9 a.m. of the 30th. The observed range of atmospheric pressure was, therefore, 0·907 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 62·2°, or 4·3° above the value for June, 1911. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·465), the value was 63·0°, or 2·9° above the average mean temperature for July, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (60·1°). The arithmetical mean of the maximal and minimal readings was 63·5°, compared with a thirty-five years' average of 60·5°. On the 13th the thermometer in the screen rose to 78·2°—wind, E.; on the 2nd the temperature fell to 45·6°—wind, N.W. The minimum on the grass was 42·8°, also on the 2nd.

The rainfall was 2·994 inches, distributed over 14 days. The average rainfall for July in the thirty-five years, 1871-1905, inclusive, was 2·680 inches, and the average number of rain-days was 17. The rainfall, therefore, was above, whereas the rain-days were below, the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868 ·741 inch fell on but 5 days. In 1910, 2·400 inches fell on 16 days.

High winds were noted on 8 days, but never attained the force of a gale (8). Temperature reached or exceeded 70° in the screen on 21 days, compared with 4 days in 1910, 3 days in 1909, 9 days in 1908 and 1907, 10 in 1906, 17 in 1905, and 10 in 1904. The thermometer never failed to reach 60°. In 1888 the maximum for July was only 68·7°.

A solar halo was seen on the 6th, 7th, and 26th. Fogs were observed on the 7th, 12th, 28th and 29th. A violent thunderstorm occurred on the late afternoon of the 29th.

The rainfall in Dublin during the seven months ending July 31st amounted to 10·723 inches on 94 days, compared with 21·032 inches on 127 days in 1910, 15·377 inches on 106 days in 1909, 13·809 inches on 120 days in 1908, 14·358 inches on 127 days in 1907, 13·664 inches on 122 days in 1906, 11·022 inches on 109 days in 1905, 13·905 inches on 117 days in 1904, 19·072 inches on 131 days in 1903, 15·507 inches on 115 days in 1902, 11·432 inches on 93 days in 1901, only 7·935 inches on 80 days in 1887, and a thirty-five years' (1871-1905) average of 14·710 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean height of the barometer was 30·135 inches, the range of atmospheric pressure being from 30·596 inches at 9 a.m. of the 11th to 29·684 inches at 9 p.m. of the 17th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 63·8°. The arithmetical mean of the daily maximal and minimal temperatures was 63·2°, the mean maximum being 71·8°, and the mean minimum 54·1°. The screened thermometers rose to 81·0° on the 13th and 14th, and fell to 40·6° on the 3rd. On the 11th the grass minimum was 39·3°. Rain fell on 11 days to the amount of 2·853 inches, the greatest fall in 24 hours being 1·390 inches on the 29th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 221·8 hours, of which 13·5 hours occurred on the 8th, 11th, and 13th. The mean daily duration was 7·2 hours. In July, 1904, there were 201 hours of bright sunshine; in 1905, 162·2 hours; in 1906, 184·8 hours; in 1907, 178·1 hours; in 1908, 174·3 hours; in 1909, 139·8 hours, and in 1910, 205·0 hours. The mean sub-soil temperatures at 9 a.m. were—at 1 ft., 62·8°; at 4 ft., 58·3°.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 2·59 inches on 11 days. The maximal fall in 24 hours was 1·15 inches, measured on the 29th. The mean temperature was 65·4°, the range being from 84° on the 13th to 48° on the 2nd. There was a severe thunderstorm on the 29th.

The rainfall recorded by Mr. George B. Edmondson at Manor Mill Lodge, Dundrum, was 2·41 inches on 9 days. Of this quantity, 1·11 inches fell in the thunderstorm of the 29th. The mean temperature was 64·9°, the thermometer rising to 84° on the 13th, and falling to 46° on the 2nd.

At Druid Lodge, Killiney, Co. Dublin, Mrs. Olive F. Symes registered a rainfall of 2·42 inches on only 8 days. The heaviest fall in 24 hours was ·97 inch in the thunderstorm of the 29th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·095 inches on 13 days. The largest daily fall was ·535 inch on the 27th. The mean shade temperature was 61·7°, the extremes being—highest, 77° on the 6th; lowest, 41° on the 1st.

Captain Edward Taylor, D.L., recorded a rainfall of 2·20 inches on 13 days at Ardgillan, Balbriggan, Co. Dublin. This measurement was ·50 inch below the average and the rain-days were 2 in defect. The largest rainfall in 24 hours was ·44 inch on the 27th. Since January 1, 1911, 13·07 inches of rain have fallen at Ardgillan on 94 days, the precipitation being 2·07 inches under the average and the rain-days 14 in defect. The shade temperature in July ranged from 42·8° on the 2nd to 75·5° on the 12th.

Miss C. Violet Kirkpatrick reports a rainfall of 1·83 inches on 13 days at Cheeverstown Convalescent Home, Clondalkin, Co. Dublin. The heaviest fall in 24 hours was ·44 inch in the great thunderstorm of the 29th.

At the Ordnance Survey Office, Phœnix Park, rain fell on 12 days to the amount of 2·306 inches, the greatest rainfall in 24 hours being 1·120 inches on the 29th. The total duration of bright sunshine was 201·5 hours; the greatest daily sunshine being 15·2 hours on the 14th. The thermometer rose to 81·8° in the screen on the 13th, having fallen to 41·6° on the 11th.

Dr. Christopher Joynt, F.R.C.P.I., recorded a rainfall of 2·997 inches on 13 days at 21 Leeson Park, Dublin. The greatest fall in 24 hours was 1·260 inches, which occurred in the thunderstorm of the 29th.

Dr. J. H. M. Armstrong reports that the rainfall at Coolagad, Greystones, Co. Wicklow, was 2·64 inches on 13 days, the maximal daily fall being ·60 inch on the 26th. Since January 1, 1911, the rainfall at that station equals 9·65 inches on 77 days.

Dr. W. S. Ross returns the rainfall at Clonsilla, Greystones, as 2·33 inches on 12 days, the maximal measurement in 24 hours being ·52 inch on the 26th. The thermometer in the screen ranged from 44° on the 2nd to 80° on the 26th. The mean maximum was 70·5°, the mean minimum 53·1°, and the mean temperature 61·8°.

At Cork Mr. W. Miller registered 2·97 inches of rain on 8 days, the fall being 0·39 inch over the average for July, whereas the rain-days were 6 in defect. The greatest rainfall in 24 hours was 0·92 inch on the 31st. There were 19 consecutive days without rain before the 18th. Since January 1, 1911, 15·80 inches of rain have fallen in Cork on 90 days, the measurement being 3·99 inches under the average for the first seven months of the year, and the rain-days being 17 in defect. Thunder and lightning occurred on the 25th and 29th. Hail fell on the latter date.

At the Rectory, Dunmanway, Co. Cork, the Rev. Arthur Wilson, M.A., recorded a rainfall of 3·45 inches on 10 days. The heaviest falls in 24 hours were—1·15 inches on the 29th, and ·79 inch on the 25th. There was no rain till the night of the 19th. The weather was especially hot from the 10th to the 14th. There was a great storm of thunder and lightning on the 29th at noon with heavy rain. A second thunderstorm occurred at 11 p.m. of the same day.

At Derreen, Kenmare, Co. Kerry, Mr. W. Holbrow measured 4·36 inches of rain on 10 days, the maximum in 24 hours being ·78 inch on the 31st. At Derreen the weather was very fine and warm to the 19th, from which date to the close heavy showers fell, accompanied by thunder on the 25th and 29th. Great drought prevailed from the 5th to the 19th.

August.—A splendid summerlike month, but with frequent showers at the beginning and close, and electrical disturbances from the 11th to the 13th inclusive, on the 20th (sheet lightning), and on the 28th. South-westerly winds—often blowing with considerable force—prevailed at first and also on the last 7 days, whereas light to moderate easterly winds accompanied a spell of high atmospheric pressure from the 10th to the 17th. The mean temperature (63·2°) nearly approached that of August, 1899, which established a record with its arithmetical mean of 63·4°.

In Dublin the arithmetical mean temperature (63·2°) was 3·5° above the average (59·7°); the mean of the dry-bulb readings at 9 a.m. and 9 p.m. was 62·0°. In the forty-seven years ending with 1911, August was coldest in 1881 (M. T. = 57·0°), and warmest in 1899 (M. T. = 63·4°). In 1910 the M. T. was 59·1°.

The mean height of the barometer was 29·944 inches, or 0·047 inch above the corrected average value for August—namely, 29·897 inches. The mercury rose to 30·263 inches at 9 a.m. of the 10th, and fell to 29·515 inches at 9 a.m. of the 24th. The observed range of atmospheric pressure was, therefore, 0·748 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 62·0°. It was 0·4° below the value for July, 1911. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·47), the mean temperature was 62·8°, or 3·5° above the average mean temperature for August, calculated in the same way, in the thirty-five years 1871-1905, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 63·2°, compared with a thirty-five years' average of 59·7°. On the 17th, the thermometer in the screen rose to 78·1°—wind, S.W.; on the 30th, the temperature fell to 50·9°—wind, W. The minimum on the grass was 46·8° on the 30th.

The rainfall was ·869 inch on 15 days. The average rainfall for August in the thirty-five years, 1871-1905 inclusive, was 3·240 inches, and the average number of rainy days was 18. The rainfall, therefore, and the rain-days were much below the average. In 1900 the rainfall in August was very large—5·871 inches on 17 days; in 1889, also, 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. August, 1905, established a record for rainfall in this month in Dublin, for the measurement was 7·019 inches on 22 days, 3·436 inches having fallen on the 25th. In 1910 the rainfall was 3·350 inches on 22 days.

High winds were noted on 9 days, but never attained the force of a gale (8). Temperature reached 70° in the screen on 14 days, and on no day fell below 50°. A solar halo was seen on the 4th, 5th, 17th and 19th. Fog was observed on the 10th. Thunderstorms occurred on the 12th, 13th and 28th.

The rainfall in Dublin during the eight months ending August 31st amounted to 11·592 inches on 109 days, compared with 24·382 inches on 149 days in 1910, 16·677 inches on 119 days in 1909, 17·244 inches on 135 days in 1908, 16·588 inches on 146 days in 1907, 15·425 inches on 139 days in 1906, 18·041 inches on 131 days in 1905, 16·808 inches on 135 days in 1904, 21·872 inches on 157 days in 1903, 18·456 inches on 133 days in 1902, 14·384 inches on 106 days in 1901, 9·455 inches on 96 days during the same period in 1887, and a thirty-five years' average (1871-1905) of 17·950 inches on 131 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 29·957 inches. The range of atmospheric pressure was between 30·260 inches at 9 a.m. of the 10th and 29·534 inches at 9 a.m. of the 24th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 62·8°. The arithmetical mean of the daily maximal and minimal temperatures was 62·9°. The screened thermometers rose to 79·7° on the 17th and fell to 50·7° on the 30th. On the 11th the grass minimum was 41·5°. Rain fell on 15 days to the amount of ·997 inch, the greatest fall in 24 hours being ·261 inch on the 28th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 216·6 hours, of which 11·5 hours occurred on the 8th, and 11·4 hours on the 29th. In August, 1904, there were 183·75 hours of bright sunshine; in 1905, 121·9 hours; in 1906, 176·9 hours; in 1907, 151·4 hours; in 1908, 148·7 hours; in 1909, 157·9 hours, and in 1910, 125·54 hours. The mean earth temperatures were—at 1 ft., 63·7°; at 4 ft., 60·8°.

At Ardgillan Castle, Balbriggan, Captain Edward Taylor, D.L., registered 2·34 inches of rain on 15 days, the greatest fall in 24 hours being ·60 inch on the 23rd. The rainfall was 1·24 inches below the average and the rain-days were 3 in defect. Since January 1, 1911, 15·51 inches of rain have fallen on 109 days, the measurement being 3·26 inches in defect and the rain-days 16 less than the average. Thunderstorms occurred on the 28th and 29th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·94 inches on 14 days; the heaviest fall in 24 hours was ·545 inch on the 23rd. The mean shade temperature was 60·9°, the extremes being—highest, 75° on the 17th; lowest, 46° on the 29th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 16 days to the amount of 1·253 inches, the largest measurement in 24 hours being ·260 inch on the 28th. The total duration of bright sunshine was 192·4 hours, the longest daily spell being 12·3 hours on the 8th.

Miss C. Violet Kirkpatrick measured 1·60 inches of rain on 17 days at Cheeverstown Convalescent Home, Clondalkin, Co. Dublin, the largest record in 24 hours being ·46 inch on the 28th.

Dr. Christopher Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park as ·850 inch, of which ·120 inch fell on the 27th and again on the 28th. The rain-days were 17. The total fall since January 1 amounts to 12·019 inches on 104 days.

Mr. George B. Edmondson reports that at Manor Mill Lodge, Dundrum, Co. Dublin, the rainfall was 1·16 inches on 18 days. The maximal fall in 24 hours was ·22 inch on the 28th. The mean shade temperature was 63·8°, the range being from 81° on the 17th to 50° on the 22nd.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 17 days to the amount of 1·27 inches, the greatest daily fall being ·22 inch on the 28th. The shade temperature ranged from 80° on the 8th to 52° on the 11th and 30th. The mean temperature in the shade was 63·7°. A thunderstorm occurred on the 28th.

According to Mrs. Olive F. Symes, at Druid Lodge, Killiney, Co. Dublin, 1·38 inches of rain fell on 15 days. The maximal fall in 24 hours was ·42 inch on the 1st. The average rainfall at Cloneevin, Killiney, in August of the twenty-four years, 1884-1907, was 3·212 inches on 16·8 days.

According to Dr. J. H. M. Armstrong, at Coolagad, Greystones, Co. Wicklow, the rainfall for August was 1·93 inches on 16 days. The heaviest fall in 24 hours was ·44 inch on the 23rd. The total fall since January 1 amounts to 11·58 inches on 93 days.

At Clonsilla, Greystones, Co. Wicklow, Dr. W. Stewart Ross recorded a rainfall of 2·02 inches on 12 days. The greatest measurement in 24 hours was ·91 inch on the 1st. The mean temperature was 62·0°, the highest being 79·0° on the 15th; the lowest, 45·0° on the 31st.

According to Mr. W. Miller, the rainfall in Cork City was 2·32 inches, or 1·17 inches less than the average, and the rain-days were 13, or 3 days in defect. The greatest fall in 24 hours was 0·47 inch on the 23rd. The mean temperature of the month was 60·2°, which is 0·5° above the average of 28 years. The thermometer rose to 73·0° on the 13th and fell to 45·0° on the 30th. The rainfall for 1911 up to August 31 was 18·12 inches on 103 days, compared with averages of 23·43 inches and 123 days respectively.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 3·39 inches on 18 days. The largest measurements in 24 hours were ·70 inch on the 2nd and ·52 inch on the 4th. At Dunmanway the first week was very stormy and unsettled. The remainder of the month was very fine and warm, especially from the 8th to the 18th and from the 21st to the 25th. The average rainfall in August, based on the returns for the last six years, is 4·81 inches. In 1911, the rainfall to August 31 equalled 33·35 inches, compared with a six years' average of 34·16 inches.

SEPTEMBER.—The magnificent summer of 1911 lasted well into September, the first twelve days were extremely fine and warm, save that heavy thunder showers fell in Dublin on the morning of the 4th. On the 8th the thermometer rose to 94° at Greenwich and Raunds (Nottinghamshire), to 93° at Cambridge and to 91° at some stations in both the S.E. and S.W. of England. The highest reading in Ireland during this warm period was 82° at Killarney on the 7th. During all this fine, summerlike period, the barometer stood high over the southern half of the British Isles and Central Europe, whereas depressions passed from Iceland across Northern Europe. In the second week temperature gave way, owing to the arrival of a shallow depression from the Bay of Biscay which determined the setting in of a northerly air current. Rain fell in Dublin on the night of the 11th, and thunderstorms prevailed over the north of England on that day. The third week (17th-23rd), opened with fine dry weather; but a decided change soon took place. On Tuesday the 19th, an atmospheric depression advanced towards the British Isles from Iceland, and with its rains and fresh or squally W. to N.W. winds temperature fell, so that the week proved colder than the average—a condition which had not happened since the closing week of June. On Sunday the 24th a depression, with the barometer down to 28·62 inches at Seydisfjord, was found off the south-east of Iceland. The secondaries of this system passed over the United Kingdom, throwing the weather into a cold, showery condition. On the 25th no less than 3 inches of rain fell at Roche's Point, Cork Harbour. In Dublin there were registerable rainfalls on 9 out of the last 12 days of the month, whereas only 2 out of the first 18 days were rain-days. The brisk autumnal fall of temperature may be gauged by the weekly means recorded in Dublin—namely, 60·6°, 55·7°, 53·5°, 52·7°.

In Dublin the arithmetical mean temperature (56·5°) was 0·6° above the average (55·9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 55·3°. In the forty-seven years ending with 1911, September was coldest in 1886 and 1892 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°) and 1898 (M. T. = 60·2°). In 1910 the M. T. was 55·8°.

The mean height of the barometer was 30·053 inches, or 0·143 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·414 inches at 9 p.m. of the 15th, and fell to 29·368 inches at 9 p.m. of the 20th. The observed range of atmospheric pressure was, therefore, 1·046 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 55·3°, or 6·7° below the value for August, 1911. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·476), the mean temperature was 56·2°, or 0·5° above the average mean temperature for September, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (55·7°). The arithmetical mean of the maximal and minimal readings was 56·5°, compared with a thirty-five years' average of 55·9°. On the 5th the thermometer in the screen rose to 73·1°—wind, W.; on the 21st the temperature fell to 41·7°—wind, W. to N.N.W. The minimum on the grass was 37·9° on the 16th.

The rainfall was 1·007 inches on 11 days. The average rainfall for September in the thirty-five years, 1871-1905, inclusive, was 2·210 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4·048 inches on, however, only 13 days; in 1896 no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1910 only ·726 inch fell on 10 days.

High winds were noted on 6 days, but never attained the force of a gale. A lunar halo was observed on the 10th and 12th, and a solar halo on the 28th. Fog occurred on the 6th, 7th, and 21st. Thunder was heard on the 4th, and lightning was seen on the 20th.

The rainfall in Dublin during the nine months ending September 30th amounted to 12·599 inches on 120 days, compared with 25·108 inches on 159 days in 1910, 18·493 inches on 134 days in 1909, 19·557 inches on 154 days in 1908, 17·140 inches on 153 days in 1907, 16·121 inches on 146 days in 1906, 19·266 inches on 145 days in 1905, 19·147 inches on 152 days in 1904, 25·269 inches on 174 days in 1903, 21·425 inches on 149 days in 1902, 18·070 inches on 124 days in 1901, only 10·968 inches on 112 days in 1887, and a thirty-five years' average of 20·160 inches on 146 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. C. D. Clark, reports that the mean height of the barometer was 30·057 inches. The range of atmospheric pressure was between 30·410 inches at 9 p.m. of the 17th and 29·375 inches at 9 p.m. of the 20th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56·4°. The arithmetical

mean of the daily maximal and minimal temperatures was 56·3°. The screened thermometers rose to 75·3° on the 5th, and fell to 40·0° on the 21st. On the same date the grass minimum was 29·5°. Rain fell on 11 days to the amount of ·990 inch, the greatest fall in 24 hours being ·415 inch on the 25th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 148·5 hours, of which 11·1 hours occurred on the 1st. The mean earth temperatures were—at 1 ft., 58·3°; at 4 ft., 58·6°. The one-foot thermometer ranged from 61·7°, on the 2nd, 3rd and 4th, to 54·0° on the 29th. The four-feet thermometer ranged from 60·0°, on the 1st, 2nd, 3rd, and 4th, to 56·4° on the 30th.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., registered 1·190 inches of rain on 11 days, the greatest fall in 24 hours being ·355 inch on the 25th. Up to September 30, the rainfall at this station was 13·209 inches on 115 days.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson recorded a rainfall of ·96 inch on 11 days, the greatest fall in 24 hours being ·39 inch on the 25th. The shaded thermometer rose to 73° on the 5th, 6th, 7th and 11th, and fell to 43° on the 29th. The mean temperature in the shade was 56·8°.

Mrs. Olive F. Symes reports that the rainfall at Druid Lodge, Killiney, Co. Dublin, was ·50 inch on 8 days, the maximum being ·33 inch on the 25th. The average September rainfall at Cloneevin, Killiney, in 24 years (1885-1908) was 1·961 inches on 12·9 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·025 inches on 12 days, the greatest fall in 24 hours being ·455 inch on the 25th. The mean shade temperature was 53·8°, the extremes being—highest, 72·5° on the 5th; lowest, 36° on the 30th.

At Ardgillan Castle, Balbriggan, Co. Dublin, 210 feet above sea-level, Captain Edward Taylor, D.L., measured ·81 inch of rain on 10 days, the rainfall being 1·20 inches below the average and the rain-days being 3 in defect. The total rainfall from January 1, amounts to 16·32 inches on 119 days. The rainfall is 4·46 inches and the rain-days are 19 in defect of the average. The maximal temperature in the shade was 73·9° on the 5th, the minimum was 38·0° on the 21st.

At Cheeverstown Convalescent Home, Clondalkin, Co. Dublin, Miss C. Violet Kirkpatrick and Miss Eleanor M. Moore recorded a rainfall of 1·52 inches on 14 days, the maximal fall in 24 hours being ·49 inch on the 11th.

The rainfall recorded at the Ordnance Survey Office, Phœnix Park, was 1·268 inches on 11 days, the greatest measurement in 24 hours being ·435 inch on the 25th. The total amount of sunshine at this station was 152·9 hours, the most registered on any one day being 12·0 hours on the 1st.

At Clonsilla, Greystones, Dr. W. Stewart Ross recorded a rainfall of 1·59 inches on 11 days. The greatest rainfall in 24 hours was ·60 inch on the 25th. Temperature was highest (76°) on the 12th, lowest (40°) on the 22nd. The mean temperature was 55·8°, the mean maximum being 63·7°, the mean minimum, 47·9°.

Dr. J. H. M. Armstrong, M.B., reports that at Coolagad, Greystones, Co. Wicklow, the rainfall was 1·76 inches on 13 days. The heaviest fall in 24 hours was ·61 inch on the 25th. At Coolagad the rainfall since January 1st, 1911, has been 13·34 inches on 106 days.

Dr. Charles D. Hanan, M.B., reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, rain fell to the amount of 1·92 inches on 11 days, the heaviest rainfall in 24 hours being ·88 inch on the 25th. The screened thermometers rose to 74·6° on the 5th, and fell to 41·9° on the 21st. The mean maximum temperature was 61·6°, the mean minimum 48·3°, and the arithmetical mean temperature 54·9°.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 4·29 inches on 16 days, the heaviest falls in 24 hours being 1·15 inches on the 11th, and 1·17 inches on the 25th. Of the latter amount ·85 inch fell in 2½ hours. The rainfall of September at Dunmanway was 1·46 inches over the average of the last 6 years (2·83 inches). The total fall in the 9 months of 1911 has been 37·64 inches, or ·65 inch more than the average of the same period in the last 6 years (36·99 inches). The first 9 days of the month were very fine and warm. The weather was also very fine, but cooler, from the 12th to the 18th.

Mr. Wm. Miller states that in the City of Cork the rainfall was 2·58 inches on 13 days, or 0·10 inch and 3 days short of the average for September. The rainfall was greatest on the 25th, when 0·83 inch was measured. In the 9 months ended September 30, the rainfall was 20·70 inches on 116 days, or 5·40 inches and 22 days less than the average.

At Derreen, Kenmare, Co. Kerry, Mr. W. Holbrow registered a rainfall of 5·72 inches on 13 days, the heaviest fall in 24 hours being 2·58 inches on the 11th. On that day 1·22 inches fell in 1 hour and 10 minutes. With the exception of this downpour of rain, the weather was fine from the 1st to the 19th. The remainder of the month was showery and cold.

OCTOBER.—The month opened with cold northerly winds and frequent showers. From the 6th to the 13th beautiful weather prevailed owing to the presence of an anticyclone, in which the barometer rose slightly above 30·6 inches over the north of Ireland and the south of Scotland on the 10th. During this period the nights were often cold, with frost inland, while the days were bright and warm. Between the 13th and 15th a large but shallow depression lay off the S. of Ireland and over the Bay of Biscay. This system caused S.E. winds and dull, rainy weather. But St. Luke's Day, the 18th, was very fine, warm and bright. From that date to the close very unsettled weather was experienced. Rain fell almost daily—often in large quantities—and strong winds or gales were felt as deep depressions approached from the Atlantic in quick succession, their secondary systems passing directly over the British Islands.

In Dublin the arithmetical mean temperature (50·8°) was above the average (49·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 49·9°. In the forty-seven years ending with 1911, October was coldest in 1892 (M. T. = 44·8°) and in 1896 (M. T. = 45·0°). It was warmest in 1908 (M. T. = 55·4°) and in 1876 (M. T. = 53·1°). In 1910, the M. T. was 51·7°.

The mean height of the barometer was 29·886 inches, or 0·046 inch above the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·563 inches at 9 a.m. of the 10th, and fell to 28·870 inches at 11.30 a.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1·693 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 49·9°, or 5·4° below the value for September, 1911. The arithmetical mean of the maximal and minimal readings was 50·8°, compared with a thirty-five years (1871-1905) average of 49·5°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.*) × ·485, the mean temperature was 50·6°, or 1·3° above the average mean temperature for October, calculated in the same way, in thirty-five years, 1871-1905, inclusive (49·3°). On the 18th the thermometer in the screen rose to 61·4°—wind, S.E.; on the 29th the temperature fell to 33·2°—wind, calm. The minimum on the grass was 30·0° also on the 29th.

The rainfall was 3·787 inches, distributed over 20 days. The rainfall was considerably above, while the rainy days were also above, the average. The average rainfall for October in the thirty-five years, 1871-1905, inclusive, was 2·870 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1904, only ·454 inch fell on 11 days, in 1890 only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days.

High winds were noted on 7 days, and attained the force of a gale on 2 days—the 21st and 30th. The atmosphere was foggy in Dublin on the 7th, 10th, 11th, 12th, 13th, 14th, 27th, and 28th. There was a solar halo on the 2nd and again on the 11th. Thunder and lightning occurred on the 5th. Lightning was seen on the 26th. Hail fell on the 3rd, 27th and 30th.

The rainfall in Dublin during the ten months ending October 31st, 1911, amounted to 16·386 inches on 140 days, compared with 27·330 inches on 177 days in 1910, 21·106 inches on 158 days in 1909, 12·366 inches on 123 days during the same period in 1887 (the dry year), and a thirty-five years' (1871-1905) average of 23·030 inches on 164 days.

Mr. C. D. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·898 inches, the range of atmospheric pressure being from 30·550 inches at 9 a.m. of the 10th to 28·891 inches at 9 a.m. of the 22nd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50·7°. The arithmetical mean of the daily maximal and minimal temperatures was 50·8°. The screened thermometers rose to 63·9° on the 18th and fell to 30·7° on the 29th. On this latter date the grass minimum was 19·7°. Rain fell on 18 days to the amount of 3·625 inches, the greatest fall in 24 hours being ·775 inch on the 20th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 79·7 hours, of which 7·0 hours occurred on the 8th and again on the 10th. The mean daily sunshine was 2·6 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 52·1°; at a depth of 4 feet it was 54·2°.

Dr. Christopher Joynt, F.R.C.P.I., registered 3·945 inches of rain on 20 days at 21 Leeson Park, Dublin, the largest measurement in 24 hours being ·870 inch on the 26th. On the 20th ·860 inch was recorded. The ten months' rainfall at this station is 17·154 inches on 135 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·085 inches on 16 days, the greatest fall in 24 hours being ·615 inch on the 26th. The mean shade temperature was 47·9°, the extremes being—highest, 60·0° on the 18th; lowest, 27·5° on the 28th.

Dr. Henry Cullinan furnishes the following Abstract of Observations made at Portrane House, Donabate, Co. Dublin, Lat. 53° 29′ N., Long. 6° 7′ W., in the month of October, 1911:—

Rainfall (on 15 days),	3·04 inches.
Greatest Daily Rainfall (on 26th),	·83 inch
Highest Temperature in Shade (on 18th and 20th),	60·2°.
Lowest Temperature in Shade (on 29th),	32·0°.
Mean Maximum Temperature for month,	55·7°.
Mean Minimum Temperature for month,	45·3°.
Arithmetical Mean Temperature,	50·5°.

Captain Edward Taylor, D.L., returns the rainfall at Ardgillan, Balbriggan, Co. Dublin (height above sea level, 210 feet), as 3·75 inches on 17 days, the largest measurement in one day being ·96 inch on the 26th. The rainfall was 1·15 inches above the average and the rain-days were equal to the average. From January 1 to October 31, the rainfall at Ardgillan has been 20·07 inches on 136 days, or 3·31 inches and 19 days below the respective averages. The highest shade temperature in October was 60·8° on the 18th, the lowest was 31·9° on the 29th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 22 days to the amount of 5·02 inches, compared with 3·45 inches on 24 days in 1902, 3·38 inches on 26 days in 1903, ·42 inch on 9 days in 1904, 1·54 inches on 15 days in 1905, 4·52 inches on 24 days in 1906, 5·40 inches on 30 days in 1907, 1·77 inches on 15 days in 1908, 3·02 inches on 25 days in 1909, and 2·27 inches on 19 days in 1910. The greatest measurement in 24 hours was 1·23 inches on the 20th. The mean temperature in the shade was 50·3°, the range being from 61° on the 20th to 33° on the 29th. The mean temperature of October was 50·9° in 1902, 50·8° in 1903, 51·6° in 1904, 47·1° in 1905, 50·7° in 1906, 49·9° in 1907, 55·0° in 1908, 51·6° in 1909, and 51·4° in 1910.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson measured 4·74 inches of rain on 20 days, the maximum in 24 hours being 1·17 inches on the 20th. The mean temperature of the month was 49·9°, the thermometer rising to 63° on the 20th and falling to 33° on the 29th.

Mrs. Olive F. Symes returns a rainfall of 5·45 inches on 17 days at Druid Lodge, Killiney, Co. Dublin. The heaviest fall in 24 hours was 1·24 inches on the 26th. The average October rainfall at Cloneevin, Killiney, in the 24 years, 1885-1908, was 2·985 inches on 17·2 days.

The rainfall recorded at Cheeverstown Convalescent Home, Clondalkin, Co. Dublin, by Miss Eleanor M. Moore, was 3·85 inches on 20 days. The heaviest rainfall in 24 hours was ·89 inch on the 26th. Hail fell on the 22nd and 26th.

Dr. W. S. Ross recorded 4·925 inches of rain on 18 days at Clonsilla, Greystones, Co. Wicklow, the greatest rainfall in 24 hours being 1·13 inches on the 20th. The mean temperature for October was 50·0°. The shade thermometer rose to 63° on the 21st, and fell to 31° on the 29th.

At Coolagad, Greystones, Co. Wicklow, Dr. John H. Armstrong, M.B., measured 5·74 inches of rain on 22 days, the maximal fall in 24 hours being 1·52 inches on the 20th. From January 1 to October 31, 1911, the rainfall at Coolagad amounted to 19·08 inches on 128 days.

Dr. Charles D. Hanan reports that 5·63 inches of rain fell on 20 days at the Royal National Hospital for Consumption for Ireland, near Newcastle, Co. Wicklow. The maximum in 24 hours was 1·30 inch on the 20th. The mean temperature of the month at the Hospital was 48·9°, the extreme readings of the shade thermometer being—highest, 62·0° on the 18th; lowest, 31·5° on the 26th.

Mr. W. Miller states that in the City of Cork there were 17 days with rain during the month, or one day less than the average—total fall, 4·50 inches, which was 1·20 inches over the average. No rain fell in Cork on the first 12 days of the month. The greatest day's rain was that of the 20th—·95 inch. The rainfall of the past ten months was 25·20 inches on 133 days, which was 4·20 inches under the average for the same period. The rain-days were 21 in defect.

The Rev. Arthur Wilson, M.A., recorded a rainfall of 6·45 inches on 19 days at the Rectory, Dunmanway, Co. Cork. The heaviest falls in 24 hours were 1·60 inch on the 28th, ·88 inch on the 20th, ·81 inch on the 14th, and ·72 inch on the 21st. The first 12 days were fine, no rain falling from the 2nd to the 11th, inclusive. After the 13th the weather was very unsettled, with heavy rains, chiefly at night. The total rainfall for the completed 10 months of 1911 is 44·09 inches, compared with an average for 6 years of 42·63 inches. Distant thunder occurred on the night of the 26th. The average rainfall of October for the 6 years is 5·73 inches.

Mr. William Holbrow reports a rainfall of 6·94 inches on 19 days at Derreen, Kenmare, Co. Kerry, the heaviest fall in 24 hours being 1·94 inches on the 29th, all of which fell in 9 hours, causing great floods. The weather was very fine at Derreen from the 1st to the 17th. From the 19th to the 31st there was a stormy period. Thunder on the 26th.

At the Ordnance Survey Office, Phœnix Park, Dublin, the October rainfall was 3·553 inches on 18 days. The heaviest fall in 24 hours was ·820 inch on the 26th. The total amount of bright sunshine was 83·1 hours, the daily maximal duration being 7·2 hours on the 8th.

At the Royal Botanic Gardens, Glasnevin, rain fell on 19 days to the amount of 4·10 inches, the greatest daily fall being ·83 inch on the 26th.

NOVEMBER.—A rainy, unsettled month, of south-westerly winds, except from the 17th to the 27th, when there was a prevalence of winds from polar quarters—N.W., N.E., and E. In the same period also the rainfall was scanty. The atmosphere was in a very disturbed state over the Atlantic, especially in the Icelandic region. At 7 a.m. of the 4th the barometer was down to 27·99 inches at Thorshavn, in the Faeroe, and during the previous night the wind-force at Malin Head is reported to have been that of a hurricane. In the course of the week ended Saturday, the 11th,

thunderstorms occurred on various dates over a wide area in Great Britain, and also in Ireland at Birr Castle, Waterford, and Valentia. South and south-west winds and heavy rains were the leading features of the period from the 12th to the 18th, inclusive, large and deep cyclonic systems from the Atlantic maintaining a low atmospheric pressure. One of these disturbances passed eastwards from Ireland to Great Britain on the morning of the 18th, with the result that a strong northerly air-current prevailed in the former country. This held throughout the following week (the 19th to the 25th inclusive), so that drier and colder weather was experienced. With a return of a southerly air-current on the 28th temperature rose, and the month closed with a day of almost exceptional mildness.

In Dublin the arithmetical mean temperature (44·1°) was 1·2° below the average (45·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 43·4°. In the forty-seven years ending with 1911, November was coldest in 1878 (M. T. = 38·2°), and in 1910 (M. T. = 40·8°); warmest in 1899 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°).

The mean height of the barometer was 29·641 inches, or 0·219 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·266 inches at 9 a.m. of the 29th, and fell to 28·797 inches at 2 p.m. of the 17th. The observed range of atmospheric pressure was, therefore, 1·469 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·4°, or 6·5° below the value for October, 1911. The arithmetical mean of the maximal and minimal readings was 44·1°, compared with a thirty-five years' (1871-1905) average of 45·3°. On the 14th the thermometer in the screen rose to 57·5°—wind, S.W.; on the 22nd the temperature fell to 30·4°—wind, N. The minimum on the grass was 27·1° also on the 22nd.

The rainfall was 3·018 inches on 23 days—the rainfall was above and the rain-days were much above the average. The average rainfall for November in the thirty-five years, 1871-1905, inclusive, was 2·720 inches, and the average number of rain-days was 17. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1910 the rainfall was 2·544 inches on 17 days.

High winds were noted on 14 days, and attained the force of a gale on 3 days—the 3rd, 4th and 5th. The atmosphere was more or less foggy in Dublin on the 10th. A lunar halo appeared on the 6th, and a lunar corona on the 2nd, 3rd, and 7th. Hail fell on the 5th, 22nd, 26th, and 27th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 19·404 inches on 163 days, compared with 15·378 inches on 141 days during the same period in 1887, 24·086 inches on 156 days in 1901, 27·812 inches on 190 days in 1902, 30·015 inches on 212 days in 1903, 20·678 inches on 172 days in 1904, 24·013 inches on 180 days in 1905, 21·001 inches on 185 days in 1906, 24·845 inches on 196 days in 1907, 22·013 inches on 179 days in 1908, 22·531 inches on 172 days in 1909, 29·874 inches on 194 days in 1910, and a thirty-five years' average of 25·750 inches on 181 days.

Mr. C. D. Clark reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·652 inches, the range of atmospheric pressure being from 30·242 inches at 9 a.m. of the 29th to 28·912 inches at 9 p.m. of the 17th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·2°. The arithmetical mean of the daily maximal and minimal temperatures was 44·3°. The screened thermometers rose to 58·2° on the 5th and fell to 28·1° on the 11th. The grass minimum was 18·3° on the 22nd. Rain fell on 19 days to the amount of 2·789 inches, ·580 inch being measured on the 12th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 48·8 hours, giving a daily average of 1·6 hours. The mean temperature of the soil at 9 a.m. was 44·9° at a depth of one foot below the surface of the ground, 49·1° at a depth of 4 feet.

At Druid Lodge, Killiney, Co. Dublin, Mrs. Olive F. Symes states that 3·04 inches of rain fell on 17 days, compared with a twenty-four years' (1885-1908) average of 2·880 inches on 16 days at Cloneevin. The maximal fall in 24 hours was ·60 inch on the 12th.

Dr. Christopher Joynt, F.R.C.P.I., registered 3·047 inches on 23 days at Leeson Park, Dublin. The maximum in 24 hours was ·625 inch on the 12th. Up to November 30th, the rainfall of 1911 amounted to 20·201 inches on 158 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 25 days to the amount of 3·85 inches, the greatest measurement in 24 hours being ·65 inch on the 12th. The mean temperature in the shade was 43·7°, the range being from 57° on the 4th to 32° on the 11th and 22nd.

Mr. George B. Edmondson reports a rainfall of 3·63 inches on 24 days at Manor Mill Lodge, Dundrum, Co. Dublin. The greatest fall in 24 hours was ·75 inch on the 12th. The mean temperature of the month was 43·2°. On the 4th and 14th the thermometer rose to 57°; on the 11th it fell to 31°.

At Cheeverstown Convalescent Home, Clondalkin, Co. Dublin, Miss Eleanor M. Moore and Miss C. Violet Kirkpatrick recorded a rainfall of 4·30 inches on 23 days. The maximal fall in 24 hours was ·90 inch on the 12th.

Dr. A. J. Blake, Resident Medical Superintendent of the Sanatorium of the Dublin Joint Hospital Board, Crooksling, near Brittas, Co. Dublin, returns the rainfall of November at that new station as 4·98 inches on 21 days, including a fall of 1·45 inches on the 12th—the maximum in 24 hours.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·57 inches on 24 days—the greatest fall in 24 hours being ·395 inch on the 9th. The mean shade temperature was 40·2°, the extremes being—highest, 54° on the 14th; lowest, 26° on the 21st.

The rainfall at Ardgillan, Balbriggan, Co. Dublin, as recorded by Captain Edward Taylor, D.L., was 3·45 inches, or ·65 inch above the average for November. The rain-days were 23, or 8 over the average. On the 16th ·51 inch was measured. From January 1st the rainfall equalled 23·52 inches on 159 days, being 2·66 inches and 11 days in defect. The thermometer in the screen rose to 56·0° on the 14th and fell to 29·9° on the 10th. The November rainfall at Ardgillan in recent years has ranged from 0·2 inch in 1896 to 5·05 inches in 1901.

Dr. Henry Cullinan furnishes the following abstract of observations made at Portrane House, Donabate, Co. Dublin, Lat. 53° 29′ N., Long. 6° 7′ W., in the month of November, 1911:—

Rainfall (on 21 days),	3·37 inches.
Greatest Daily Rainfall (on 12th),	·71 inch.
Highest Temperature in Shade (on 14th),	56·0°
Lowest Temperature in Shade (on 22nd),	30·0°
Mean Maximum Temperature for Month,	48·1°
Mean Minimum Temperature for Month,	38·1°
Arithmetical Mean Temperature,	43·1°

Dr. John H. M. Armstrong, M.B., reports that at Coolagad, Greystones, Co. Wcklow, the rainfall was 4·79 inches on 25 days. Of the total quantity, ·50 inch fell on the 22nd.

At Clonsilla, Greystones, Co. Wicklow, Dr. W. Stewart Ross measured 3·70 inches of rain on 25 days, the heaviest fall in 24 hours being 0·40 inch on the 11th. The mean temperature was 42·5°, the maximum being 50° on the 2nd and 5th, and the minimum 29° on the 10th.

Dr. Charles D. Hanan, M.B., reports a rainfall of 4·70 inches on 28 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow. The greatest fall in 24 hours was ·62 inch on the 12th. The mean temperature for the month was 43·3°, the maximum being 57·6° on the 5th, and the minimum 30·5° on the 9th. The mean maximum was 48·3°; the mean minimum was 38·3°.

In the City of Cork Mr. William Miller returns the rainfall at 5·25 inches, or 1·35 inches more than the average for November. There were 19 rain-days, being one day less than the average. The heaviest fall in 24 hours was 1·30 inches on the 14th. Up to November 30th, the rainfall of 1911 amounted to 30·45 inches—that is, 2·85 inches under the average for the first eleven months of the year. The rain-days were 152, or 22 less than the average.

At Dunmanway Rectory, Co. Cork, the Rev. Arthur Wilson, M.A., registered a rainfall of 9·60 inches on 22 days, the heaviest fall in 24 hours being 2·04 inches on the 14th. Rain fell with a few hours' intermission from 6 p.m. of the 13th to 10 a.m. of the 15th—the measurement being 3·75 inches. This downpour caused a great flood in the River Bandon. No rain fell from the 20th to the 27th, inclusive. The rainfall for the eleven months of 1911 amounted to 53·69 inches, compared with a six years' average of 46·97 inches.

Mr. William Holbrow reports a rainfall of 11·39 inches on 21 days at Derreen, Kenmare, Co. Kerry. The heaviest fall in 24 hours was 2·47 inches on the 14th. Frost prevailed on the 20th, 25th, 26th, and 27th. The weather was stormy to the 19th; fine from the 20th to the 28th, inclusive.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 20 days to the amount of 3·735 inches, the largest measurement in 24 hours being ·880 inch on the 12th. The total amount of bright sunshine was 62·4 hours, the most in one day being 6·1 hours on the 10th.

DECEMBER.—An open, windy, very wet month. A large area of low atmospheric pressure rested upon the North Atlantic Ocean throughout the period, and at short intervals deep depressions spread in over the shores of Western Europe, producing the blustering southerly (between S.E. and S.W.) winds which formed such a striking characteristic of the month. These systems were also attended by copious downpours of rain and by unstable temperatures, which generally ranged far above the normal for the time of year. In Dublin, for example, the mean temperature was 2·5° above the average, and actually exceeded that of the previous month by about half a degree Fahrenheit. Very little frost was reported from the Continent or even from Scandinavia, and as far east as Russia freezing was intermittent and seldom if ever severe. As will appear below, the rainfall of December over Munster established a record. Only in the closing days of the month did the atmosphere come into a state of comparative rest, as an anticyclone spread northwards towards the British Isles from the Iberian Peninsula and France.

In Dublin the arithmetical mean temperature (44·5°) was 2·5° above the average (42·0°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 44·0°. In the forty-seven years ending with 1911, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. =36·8°); warmest in 1898 (M. T. = 47·6°), and in 1900 and 1905 (M. T. = 47·1°). In December, 1910, the M. T. was identical with that of 1911 (44·5°).

The mean height of the barometer was 29·534 inches, or 0·341 inch below the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·321 inches at 9 p.m. of the 31st, having fallen to 28·729 inches at 9 p.m. of the 10th. The observed range of atmospheric pressure was, therefore, 1·592 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·0°, or 0·6° above the value for November, 1911. Using the formula *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·52), the value was 44·6°, or 2·5° above the average mean temperature for December, calculated in the same way, in the thirty-five years, 1871-1905, inclusive (42·1°). The arithmetical mean of the maximal and minimal readings was 44·5°, compared with a thirty-five years' average of 42·0°. On the 18th the thermometer in the screen rose to 57·2°—wind, S.; on the 23rd the temperature fell to 33·9°—wind, N.W. The minimum on the grass was 30·0° on the 6th. There was no frost in the screen, and only 5 nights of frost on the grass were recorded.

The rainfall was 4·073 inches, distributed over 26 days. The average rainfall for December in the thirty-five years, 1871-1905, was 2·250 inches, and the average number of rain-days was 17. The rainfall, therefore, was nearly double, while the rain-days also were considerably in excess of the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days.

High winds were noted on 13 days, and attained the force of a gale on six occasions—the 4th, 5th, 6th, 13th, 18th, and 24th. The atmosphere was more or less foggy in Dublin on the 10th, 27th, 30th, and 31st. Sleet fell on the 22nd. A lunar halo was seen on the 2nd, 8th, and 30th; a lunar corona on the 30th, and a solar halo on the 14th and 19th. Lightning occurred on the night of the 9th. There was an aurora borealis on the evening of the 26th.

The rainfall in Dublin during 1911 amounted to 23·477 inches on 189 days, compared with 35·439 inches on 219 days in 1910, only 16·601 inches on 160 days in 1887, and a thirty-five years' (1871-1905) average of 28·000 inches on 198 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. C. D. Clark reports that the mean height of the barometer was 29·540 inches, the range of atmospheric pressure being from 30·306 inches at 9 p.m. of the 31st to 28·712 inches at 9 p.m. of the 10th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·8°. The arithmetical mean of the daily maximal and minimal temperatures was 44·5°. The screened thermometers rose to 58·3° on the 18th and fell to 31·0° on the 25th. On the 8th the grass minimum was 19·5°. Rain fell on 24 days to the amount of 3·698 inches, the greatest fall in 24 hours being ·750 inch on the 14th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 30·7 hours, of which 4·4 hours occurred on the 9th. The mean daily sunshine was only 1 hour. The mean temperature of the soil at 9 a.m. was 42·3° at a depth of 1 foot; at a depth of 4 feet it was 45·5°.

Captain Edward Taylor, D.L., sends the following return of the rainfall at Ardgillan, Balbriggan, Co. Dublin, for December, 1911:—(Height above sea level, 210 feet). The total rainfall was 4·51 inches, or 1·60 inches above the average. On the 14th, the most in one day, the rainfall measured 0·91 inch. The rain-days were 25, or 5 above the average. From January 1st the rainfall measured 28·03 inches on 184 days, being 1·06 inches and 6 days in defect. The wettest December was that of 1910, 5·31 inches; the driest December was that of 1898, 1·41 inches. The wettest year (1893-11) was 1910, 34·71 inches; the driest year (1893-11) was 1893, 22·87 inches. Maximum in shade on the 2nd and 18th, 53·0°; minimum in shade, on the 6th, 29·1°.

Dr. Henry Cullinan, L.R.C.P.I., furnishes the following abstract of observations taken at Portrane House, Donabate, Co. Dublin, during the month of December 1911. Lat. 53° 29′ N., Long. 6° 7′ W.:—

Rainfall (on 23 days),	3·57 inches.
Greatest Daily Rainfall (on 14th),	·89 inch.
Highest Temperature in Shade (on 17th),	57·0°
Lowest Temperature in Shade (on 23rd),	30·0°
Mean Maximum Temperature,	47·7°
Mean Minimum Temperature,	37·3°
Mean Temperature of the Air	42·5°

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·56 inches on 23 days. The greatest fall in 24 hours was ·845 inch on the 14th. The mean shade temperature was 39·9°, the extremes being—highest, 51·0° on the 18th; lowest, 27·5° on the 27th.

The rainfall at the Ordnance Survey Office, Phœnix Park, Dublin, was 3·295 inches on 25 days, the maximum in 24 hours being ·740 inch on the 14th. The total amount of sunshine was 42·1 hours, the largest daily amount was 5·8 hours on the 7th.

At Cheeverstown Convalescent Home, Clondalkin, Co. Dublin, Miss C. Violet Kirkpatrick reports that the rainfall was 4·25 inches on 27 days. The maximal fall in 24 hours was ·56 inch on the 13th, but half-an-inch or slightly more was also recorded on the 6th, 14th, and 22nd.

Dr. Christopher Joynt, F.R.C.P.I., recorded a rainfall of 4·375 inches on 26 days at 21 Leeson Park, Dublin. On the 14th ·940 inch was recorded. The total rainfall for the year was 24·576 inches on 184 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 27 days to the amount of 6·54 inches, 1·21 inches being measured on the 14th. Temperature ranged from 55° on the 17th 18th, and 31st to 35° on the 6th, 8th, 9th, and 25th. The mean shade temperature was 44° Fahrenheit.

At Manor Mill Lodge, Dundrum, Co. Dublin, Mr. George B. Edmondson measured 6·05 inches of rain on 28 days, the largest fall in 24 hours being 1·15 inches on the 14th. The mean temperature was 43·6°, the thermometer having fallen to 31° on the 7th and risen to 54° on the 31st.

Mrs. Olive F. Symes returns the rainfall at Druid Lodge, Killiney, at 6·74 inches on 20 days. The maximal fall in 24 hours was 1·15 inches on the 14th. The average December rainfall at Cloneevin, Killiney, for the 24 years (1885-1908) was 2·342 inches on 17·6 days. Since January 1, 1911, 25·78 inches of rain have fallen at this station on 147 days.

At the Sanatorium of the Dublin Joint Hospital Board, Crooksling, near Brittas, Co. Dublin, Dr. A. J. Blake, Resident Medical Superintendent, recorded a rainfall of 6·06 inches. The heaviest day's rainfall was 1·80 inches on the 19th. The number of rain-days was 26.

Dr. J. H. M. Armstrong, M.B., reports that at Coolagad, Greystones, Co. Wicklow, the rainfall in December was 9·97 inches on 26 days. Of the total amount 1·48 inches fell on the 14th, 1·01 inches on the 13th, and ·95 inch on the 6th. From January 1st to December 31st, 1911, rain fell at Coolagad on 179 days, to the total amount of 33·84 inches.

Dr. W. Stewart Ross returns the rainfall at Clonsilla, Greystones, as 8·76 inches on 23 days, the heaviest fall in 24 hours being 1·8 inches on the 14th—1 inch also fell on the 13th. The mean temperature was 40·8°, the range being from 30° on the 16th and 23rd to 53° on the 28th and 31st.

Dr. Charles H. Hanan, M.B., reports a rainfall of 9·38 inches on 27 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, the maximal fall in one day being 1·39 inches on the 14th. The mean temperature of the month was 43·7° (mean max., 48·7°, mean min., 38·6°), and the extremes were—highest, 55·0° on the 28th; lowest, 33·0° on the 30th.

At Cork, according to Mr. W. Miller, the December rainfall was 8·72 inches on 28 days, the measurement being 4·11 inches more than the average, and the rain-days being 7 in excess. The greatest daily rainfall was 1·38 inches on the 6th. The year's rainfall at this station was 39·17 inches on 180 days, the total being 1·17 inches over the average, while the rain-days were 17 in defect.

The Rev. Arthur Wilson, M.A., reports that rain fell on 31 days at the Rectory, Dunmanway, Co. Cork, to the amount of 12·41 inches, or 5·37 inches more than the average. The heaviest falls were 1·45 inches on the 6th and ·92 inch on the 22nd. Thunder was heard on the 3rd, 16th, 17th, 18th, 19th, and 21st. Heavy frost occurred on the 4th, 5th, 6th, 22nd and 23rd. The characteristic of the month was very heavy rain with bright intervals. In the last week there was less rain, and the weather was very mild. It was the wettest month in seven years (beating the previous record, Dec., 1907, with 11·80 inches). The rainfall of the year 1911 was 66·10 inches on 215 days, being 12 inches more than the average, but 13 days less than the average. It was the wettest year in 7 years. Next wettest was 1907, with 58·40 inches.

Mr. W. Holbrow returns the rainfall at Derreen, Kenmare, Co. Kerry, at 16·11 inches on 31 days. The maximum in 24 hours was 2·34 inches on the 6th. Frost occurred on 2 nights. The total rainfall in 1911 at Derreen was 74·86 inches on 195 days. Thunder occurred on the 3rd, 12th, 16th, 18th, and 23rd.

Rainfall in 1911.

At 40 Fitzwilliam Square, West, Dublin.

Rain Gauge :—Diameter of Funnel, 8 *in. Height of top—Above ground.* 1 *ft.* 4 *in. ; above sea level,* 53 *ft.*

The rainfall was 23·477 inches, or 4·523 inches less than the average annual measurement of the thirty-five years, 1871-1905, inclusive—viz., 28·000 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches. In 1870 only 20·859 inches fell; in 1884 the measurement was 20·467 inches; in 1883 it was 20·493 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34·338 inches, or 6·338 inches in excess of the average for the thirty-five years, 1871-1905. In 1910, also, the rainfall was very large, 35·439 inches on 219 days. Only once since these records commenced has the rainfall in Dublin exceeded that of 1910—namely, in 1872, when 35·566 inches fell on 238 days. In 1880 34·512 inches were measured on, however, only 188 days.

In 1911 there were 189 "rain-days" or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was 9 under the average number of rain-days, which was 198 in the thirty-five years, 1871-1905, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145.

On only one occasion in 1911 did one inch of rain fall on a given day in Dublin—viz., July 29th, 1·242 inches. In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2·037 inches. In 1902, 1·342 inches fell on July 25th, and 2·075 inches on September 2nd. An excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3·436 inches in Dublin (Fitzwilliam Square). On no previous occasion within the past 45 years had 3 inches or upwards been measured. It was the ninth occasion only since 1865—that is, in 45 years inclusive—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2·482 inches); October 27th, 1880 (2·736 inches); May 28th, 1892 (2·056 inches); July 24th, 1896 (2·020 inches); August 5th, 1899 (2·227 inches); August 2nd, 1900 (2·135 inches); November 11th, 1910 (2·037 inches); and September 2nd, 1902 (2·075 inches).

Included in the 189 rainy days in 1911 are 4 on which snow or sleet fell, and 20 on which there was hail. In January hail was observed on 1 day, in February on 1 day, in March on 4 days, in April on 3 days, in May on 3 days, in September on 1 day, in October on 3 days, and in November on 4 days. Snow or sleet fell on 1 day in January, 2 days in April, and 1 day in December. Thunderstorms occurred twice in May and June, once in July, 3 times in August, and once in October. Thunder was heard without visible lightning twice in June and once in August, September, and October. Lightning was seen once in January, three times in August, and once in September, October, and December.

The rainfall in the first six months of 1911 was only 7·729 inches on 80 days. In the second six months it was 15·748 inches on 109 days.

The rainfall was distributed quarterly as follows:—3·292 inches fell on 44 days in the first quarter, 4·437 inches on 36 days in the second, 4·870 inches on 40 days in the third, 10·878 inches on 69 days in the fourth quarter.

More or less fog prevailed on 33 occasions—5 in January, 4 in February, 2 in March, 2 in May, 3 in July, 1 in August, 3 in September, 8 in October, 1 in November, and 4 in December. High winds amounted to gales (force 8 or upwards, according to the Beaufort scale) on 20 occasions—4 in February, 2 in March, 2 in April, 1 in May, 2 in October, 3 in November, and 6 in December.

Solar halos were seen on 23 occasions, a lunar halo on 9 nights, a lunar corona on 5 nights. Aurora borealis was seen twice—on March 4th and December 26th.

Abstract of Meteorological Observations taken at Dublin (40, *Fitzwilliam-square, West*) *during the Year* 1911.

* See "Notes on the Statistical Tables," page 177. The Sunshine values are obtained from the Mountjoy Observatory in the Phœnix Park and the Earth Temperatures from Trinity College.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is: + ·058.

NOTE.—The temperatures given above were deduced from the maximal and minimal readings of the thermometer. For the year 1889, Kæmtz's Formula was used, viz. :—Mean Temperature = Min. + (Max.—Min.) ·41 ; for subsequent years the Formula used was the following :—Mean Temperature = Min. + (Max.—Min.) C, the co-efficient C varying from month to month.

TABLE OF METEOROLOGICAL DATA FOR IRELAND.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Esq., LL.D., Sc.D., F.R.S.; and published in the Quarterly Reports of the Registrar-General for Ireland.

In compiling the following Table (pp. 178-185), the stations have been grouped into two Districts, namely, 1. Ireland, North; 2. Ireland, South. The former District is represented by six stations, and the latter by seven.

The stations selected, with the names of the Observers, are as follows:—

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.
IRELAND, NORTH :—	
Malin Head, ...	Meteorological Office.
Blacksod Point, ...	Do.
Markree Castle, ...	J. R. Armstrong, for Captain Cooper.
Donaghadee, ...	Meteorological Office.
Armagh, The Observatory, ..	J. L. E. Dreyer, Ph.D.
Belfast, Queen's College, ..	John Wylie, B.A.
IRELAND, SOUTH :—	
Dublin (City), ...	Sir John W. Moore, M.D.
Waterford, ...	J. N. White, Esq.
Birr Castle, ...	O. Boeddicker, PH.D., for the Earl of Rosse
Killarney, ...	E. W. Griffin, M.D.
Valencia, ...	Meteorological Office.
Roche's Point, ...	Do.
Limerick, Mungret College, ..	Rev. W. O'Leary, S.J.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of the stations are printed. CAPITALS, normal climatological stations, 9 a.m. and 9 p.m.; *ITALIC CAPITALS*, telegraphic reporting normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 1 p.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only. At Valencia an additional observation is taken at 3 p.m. The afternoon observations are used in preparing the wind summaries and in computing the number of days of "overcast" or "clear sky." At telegraphic reporting stations (italic capitals or Roman type) the results given under "hygrometer" and "cloud" are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. and 9 p.m., or 7 a.m. 1 p.m., 9 p.m., or 7 a.m., and 6 p.m., as the case may be.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale, are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the average of the estimates of the "amount of cloud" at the hours of observation is less than 2, and as an "overcast" day if the average is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours. At Valencia and Armagh the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

Averages.—The averages used for stations are :—Temperature and Rainfall for the 35 years 1871-1905. Bright Sunshine for the 25 years 1881-1905.

District Values.—The district values of temperature, rainfall, and sunshine are computed from the data for the stations included in the Weekly Weather Report of the Meteorological Office. Only a selection of these stations is included in this Report. The average values with which the current district values are compared are for the 25 years, 1881-1905. The district values for "amount of cloud" and for the extremes of temperature and the largest rainfall in a day, are taken from the Monthly Weather Report of the Meteorological Office.

Westport .. 204
Wexford, .. 57

Y.

Youghal, .. 88, 121

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 43 (*see* page 6); and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

No. 11543.

DUBLIN CASTLE,

6th July, 1912.

SIR,

I have to acknowledge the receipt of your letter of the 5th instant, forwarding for submission to His Excellency the Lord Lieutenant, a proof of the Annual Report on Marriages, Births and Deaths in Ireland for the year 1911.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Registrar-General,

Charlemont House,

Dublin.

DUBLIN: Printed for His Majesty's Stationery Office.
By ALEX. THOM & Co. (Limited), 87, 88, & 89, Abbey-street.
